Consolidated financial statements	P. 9

Introduction

Statutes

Created by French Law of 28 April 1816 and defined in article L. 518-2 of the French Monetary and Financial Code (*Code monétaire et financier*)⁽¹⁾, "Caisse des Dépôts et consignations and its subsidiaries constitute a state-owned group at the service of France's public interest and of the country's economic development. The Group fulfils public interest functions in support of the policies pursued by the State and local authorities, and may engage in competitive activities.

Caisse des Dépôts et consignations is a special institution responsible for the administration of deposits and escrow accounts, the provision of services relating to the funds whose management has been entrusted to it, and the performance of any other, similar duties that are legally delegated to it. It is responsible for the protection of the public's savings, the funding of social housing and the management of pension schemes.

Caisse des Dépôts also plays a role in local and national economic development, particularly in job creation, urban planning, tackling financial exclusion, business start-ups, and sustainable development. Caisse des Dépôts et consignations is a long-term investor promoting business development in line with its own ownership interests.

It is closely supervised by the French Parliament and the legislative process.

It is organised by decree of the Conseil d'État (France's highest administrative court), issued upon proposal by the Supervisory Board."

Governance

Closely supervised by the French Parliament and the legislative process, Caisse des Dépôts is the only financial institution in Europe whose independence is protected by parliament. The French Parliament exercises control over Caisse des Dépôts' activities and guarantees its autonomy via a Supervisory Board, which reports to it at least once a year on its work. The Supervisory Board, set up according to the principle of equal representation, has sixteen members, including five members of the French Parliament (three deputies and two senators), two employee representatives, one representative of the French State and eight qualified officials.

The duties of the Supervisory Board have been reinforced as part of the implementation of the 2019 French PACTE Law (*Plan d'action pour la croissance et la transformation des entreprises*, or Action Plan for Business Growth and Transformation). It now has deliberative power and makes decisions that must be implemented by the Chairman and Chief Executive Officer. It monitors Caisse des Dépôts' management, oversees compliance with the risk exposure limits and considers risk strategy and appetite as well as the Group's policy on equality in the workplace and equal pay. It approves the overall organisation and the consolidated and individual financial statements. Lastly, it sets risk-appropriate working capital and liquidity

requirements and decides on the adoption of the Public Institution's budget. Chaired by a Member of Parliament, the Supervisory Board has internal rules of procedure and a number of specialised committees designed to strengthen its supervisory capabilities. These include the Audit and Risk Committee, the Savings Funds Committee, the Investments Committee (CDI), the Appointments and Compensation Committee, the Strategy Committee and the CSR and Ethics Committee.

The Chairman and Chief Executive Officer of Caisse des Dépôts is appointed for a term of five years by decree of the President of the French Republic, after a review before the finance committees of the French Parliament. The Chairman and Chief Executive Officer has wide-ranging powers and a large degree of independence. The Chairman and Chief Executive Officer is personally responsible for managing the funds entrusted to Caisse des Dépôts and chairs the Executive Committee, the Caisse des Dépôts Group's main governance body.

The Executive Committee brings together the Group's core businesses and decides on the Group's strategy. It monitors the Group's operating performance and ensures that its solutions are adapted to the needs of its customers, partners and users.

Business model

From an accounting perspective, the Public Institution is made up of two sectors:

- the Central Sector, whose financial statements are consolidated with the entities over which it exercises exclusive control, joint control or significant influence and whose consolidation has a material impact on the Caisse des Dépôts Group's financial statements;
- the Savings Fund sector, which prepares a separate statement of financial position and income statement.

Caisse des Dépôts self-finances all of its activities, without any help from the French State budget. A portion of the funds entrusted to it – the regulated savings of the French population and the deposits

of legal professional customers – finances public interest projects through loans and equity investments. Another portion of these resources is invested in financial assets managed responsibly to ensure the liquidity and yield of the entrusted funds while helping to finance the economy. The income generated by the management of its financial assets and strategic investments contributes to the financing of its public interest projects.

In terms of apportioning funding, part of the income earned from the Public Institution's Central Sector is used to constitute the funds essential to maintaining its financial strength and the Group's development capacity. Another portion is funnelled into public interest investments that Caisse des Dépôts makes in sectors and regions

(1) Article L. 518-2, version in force since 6 August 2008, amended by French Law no. 2008-776 of 4 August 2008 – art. 151 (V).

that are insufficiently covered by the market, with a medium- or even long-term profitability timeline. Finally, a portion of income earned is paid to the French State in addition to the contribution representing corporation tax, calculated very precisely on the same bases as those applied to companies, making Caisse des Dépôts one of the largest public contributors.

At the heart of the duties entrusted by law to Caisse des Dépôts, the Savings Fund centralises and manages a portion – approximately 60% – of the French population's regulated savings (*Livret A*, *Livret de développement durable et solidaire* – LDDS, and *Livret d'épargne populaire* – LEP) which it transforms into very long-term loans of up to 80 years. These are used to finance public interest projects whose framework is set by the public authorities,

prioritising social housing, urban policy and local authority projects. This mechanism for transforming savings, at no cost to the taxpayer, makes it possible to carry out very significant public financing, which supports the work of the French State and local authorities. It also guarantees perfect equity, with each category of loan being offered at the same interest rate to all borrowers, regardless of their characteristics.

Caisse des Dépôts also performs specific mandates on behalf of third parties, the French State and supervisory authorities. These strategic mandates concern pensions, disability, professional training, as well as the “France 2030” programme (formerly the Investments for the Future Plan, or PIA).

Strategy

The commitment of Caisse des Dépôts and its subsidiaries to social responsibility is at the heart of its corporate mission: “As a unique alliance of public and private economic players, the Caisse des Dépôts Group works to accelerate the green transformation and help create a better life for all.”

Faithful to this commitment and to its values (a trusted long-term player serving the public interest), the Group has set itself three objectives for the coming years:

- accelerate the ecological transformation of our economy;
- strengthen France's sovereignty (in energy, industry, digital technology and finance) and encourage its growth and economic development;

- work towards social and regional cohesion by fostering balanced regional development and supporting French people throughout their lives.

As a long-term investor serving the public interest, the sustainable policy is rooted in all of the Group's decision-making processes: from the most operational (such as the selection of projects) to the most strategic, such as the definition of the Strategic Plan approved by the Executive Committee and the Supervisory Board. This policy combines two approaches: the integration of the United Nations' Sustainable Development Goals (SDGs) into our strategic management and the management of non-financial risks.

Organisation

Together with its subsidiaries and strategic investments, Caisse des Dépôts is France's leading public finance group, focusing on four core businesses:

Banque des Territoires supports regions and their stakeholders by offering solutions tailored to local challenges, including advisory, loans and equity investments. With its network of sixteen regional offices and two subsidiaries, CDC Habitat and SCET, it offers a comprehensive range of engineering and project structuring services across all regions. It is aimed at local authorities, social housing organisations, local public companies, legal professions, businesses and financial players with the aim of working towards greener, more socially responsible regions.

Caisse des Dépôts' Social Policy division supports people throughout their lives. It contributes to social cohesion and reducing regional divisions by working mainly in five areas: pensions, vocational training, disability, old age and health. The Social Policy division manages more than 65 funds and mandates and is the partner of choice for 55,000 public sector employers, providing reliable and innovative solutions to its customers and public authorities.

The Asset Management division manages all of Caisse des Dépôts' financial investments, carried on the balance sheets of the Savings Fund and the Central Sector. As the leading public asset manager with over €300 billion in assets under management at 31 December 2024, the Asset Management division makes long-term, responsible investments in all asset classes (bonds, equities, unlisted companies, real estate, forests, etc.), directly or through its subsidiaries:

- **CDC Croissance**, an equity fund manager supporting the growth of small and medium-sized enterprises over the long term;

- **Société Forestière**, an asset management company that offers sustainable management of its clients' privately owned forest assets;
- **CDC Investissement Immobilier**, which manages Caisse des Dépôts' real estate investment portfolio.

The Strategic Investment division is in charge of acquisitions and disposals as well as shareholder management for some 20 companies in which Caisse des Dépôts is the reference shareholder. It helps to define Caisse des Dépôts' share ownership position and to provide strategic and financial support to its subsidiaries, while coordinating priorities between the Group and its subsidiaries. A long-term investor, the Strategic Investment division supports the development of its subsidiaries – whose earnings support public-interest missions – over the long term. As at 31 December 2024, Caisse des Dépôts' main strategic investments were as follows:

- **Financial institutions:** Bpifrance, Euronext, Euroclear, La Poste Groupe (through La Banque Postale and CNP Assurances), SFIL, Société Forestière, STOA;
- **Real estate:** CDC Habitat, Icade and Tonus Territoires;
- **Infrastructure:** Compagnie des Alpes, Coriance, Egis, NaTran, RTE, STOA, Suez and Transdev;
- **Services:** La Poste Groupe (through La Poste, Geopost and Docaposte), CDC Biodiversité, emeis, I4CE, SCET.

2025 economic and financial environment

Economy

In 2025, the international economic environment was marked by numerous geopolitical shocks resulting in a heightened level of uncertainty. Despite this backdrop, growth was more resilient than expected, both in the United States and in Europe. Looser monetary policies boosted activity – albeit to a lesser extent in the US given the persistent pressure on consumer prices owing to the increase in trade tariffs – and inflation in the eurozone returned to the 2% target. In France, GDP growth was 0.9% in 2025 (vs. 1.1% in 2024).

Inflation in the country fell further, under the combined effect of a sharp fall in energy prices (electricity and oil in particular) and gains in the euro. Although disinflation was weaker in the services sector, it nevertheless accelerated at the end of the year, as wage growth eased. In total, inflation in France fell from 1.7% in January 2025 to 0.8% in December, with an annual average of 0.9% in 2025, compared with 2.0% in 2024.

Financial markets

In 2025, the European Central Bank (ECB) continued and completed its monetary policy normalisation as disinflation became firmly established. Across the Atlantic, the US Federal Reserve (Fed) resumed its rate-cutting cycle after a pause in the first part of the year, due to a delicate balancing act between faltering growth and sustained inflation. Policy rates were cut by 100 basis points in the eurozone and by 75 bps in the United States, although further monetary loosening is expected in the United States (unlike the eurozone) due to a degree of political pressure from the Trump administration. As a result, market prices have evolved:

- **on the money market**, the start of the year saw a further series of policy rate cuts that lasted until June, when the ECB opted to maintain the status quo, reducing the deposit rate from 3.00% to 2.00%. The Fed, while more patient, announced a rate cut from September, followed by further cuts through to December, with the federal funds rate at [between 3.50% and 3.75%] at the end of the year. Following the movements in key policy rates, the three-month Euribor ended 2025 at 2.0%, significantly lower than the 2.7% at the end of 2024;
- **on the French bond market**, 2025 was marked by a rise in the 10-year OAT yield linked to ongoing political uncertainty following the dissolution of the French National Assembly. The unexpected upward inflections in the budget deficit added to pressures on the French government's financing conditions. As a result, the ten-year French OAT closed out 2025 at 3.6%, up 33 basis points compared to its end-2024 level (3.2%), and with a continuing significant yield spread relative to Germany at 70 bps (although down from 80 bps at the start of the year);
- **on the equity markets**, it was a particularly eventful year for the CAC 40. After a buoyant start to the year, the index – like its peers – corrected at the beginning of April in response to surprise over the scale and recessionary impact of the tariffs envisaged by the US administration, falling back below the 7,000-point mark. In the second half of the year, the index followed the broad market rally, as the asset class as a whole benefited from investors' strong appetite for technology stocks, and particularly AI in the US. As a result, the index gained around 10% in 2025 (closing at 8,150 points vs. 7,381 at the end of 2024), even though it underperformed its European peers (Eurostoxx 600 up 17%, DAX up 23%) against a backdrop of continued downward revisions to French corporate earnings expectations. In the US, the S&P gained more than 16%, closing the year at 6,846 points (vs. 5,882 at the end of 2024).

1. Consolidated financial statements

1.1 Caisse des Dépôts Group significant events

1.1.1 Arpavie

Following negotiations that began in November 2024, the SOS group and Arpavie finalised their linkup in June 2025 with the support of Caisse des Dépôts.

The aim of these two non-profits is to create a leading player in the elderly care sector, driven by humanist values and committed to the public interest.

1.1.2 Transdev

On 1 July 2025, the Rethmann group finalised the acquisition from Caisse des Dépôts of an additional 32% stake in Transdev, raising the Rethmann Group's stake to 66%. Alongside it, the Caisse des Dépôts Group, with a 34% stake in Transdev, significant interests and an active role in the governance, confirms its position as a long-term partner.

Through this transaction, the two long-standing shareholders of the Transdev group reaffirm their commitment and confidence in the sustainable growth strategy initiated in 2019 and in the management team that is driving it forward. They confirm their alliance and their ability to provide financial and strategic support for Transdev's

development over the long term. Transdev's earnings are fully consolidated in the financial statements of the Caisse des Dépôts Group up to 30 June 2025 and its contribution to attributable net over this period is €25.6 million. Since 1 July 2025, Caisse des Dépôts has exercised significant influence over the Transdev group: accordingly, its stake in Transdev is reported under "Investments in equity-accounted companies" in the consolidated financial statements. The sale of a portion of Caisse des Dépôts' stake in Transdev led to the recognition of €302 million in capital gains net of tax.

1.1.3 Caisse des Dépôts – new sustainable bond issue

On 9 October 2025, Caisse des Dépôts issued a new €1 billion sustainable bond maturing on 16 October 2030, paying a coupon of 2.75%. This issue was made under the new "Green, Social or

Sustainable Financing Framework" and is the ninth ESG bond issued since 2017.

1.1.4 Icade – sale of a portfolio of healthcare assets in Italy

On 10 December 2025, Icade sold its stake in a diversified portfolio of 23 assets in northern and central Italy to BNP Paribas REIM. The sale of this portfolio, which represented around 15% of

the Icade group's total exposure to the healthcare real estate sector, led to the repayment of the shareholder loan granted to Icade in an amount of €180.2 million.

1.1.5 Exceptional levy on profits

The February 2025 Finance Act introduced an exceptional levy on profits, payable in respect of the 2025 financial year by large corporations with revenue in France of €1 billion or more.

The 2025 levy is based on the average corporate income tax due in respect of 2025 and 2024, before deducting tax reductions, tax credits and tax receivables. The rate of this levy varies according to the company's level of revenue:

- rate of 20.6% of corporate income tax for companies whose revenue for the 2025 or 2024 financial year is equal to or greater than €1 billion but less than €3 billion;

- rate of 41.2% of corporate income tax for companies whose revenue for the 2025 or 2024 financial year is equal to or greater than €3 billion.

The impact of this levy on profits for 2024 and 2025 is recognised in full in the financial statements for the year ended 31 December 2025. The portion of the impact attributable to the Caisse des Dépôts Group was a €303 million expense, of which €232 million was recognised in the income statement and €71 million directly in equity.

1.1.6 La Poste Groupe

1.1.6.1 La Poste bond issues

1.1.6.1.1 Issuance by La Poste of perpetual deeply-subordinated notes

In January 2025, La Poste issued €750 million worth of perpetual deeply-subordinated notes. These fixed-rate reset bonds have a perpetual maturity and are callable from the second half of the sixth year. These perpetual hybrid securities are recognised as liabilities in the balance sheet under “Non-controlling interests”.

1.1.6.1.2 Buyback by La Poste of perpetual deeply-subordinated notes

La Poste redeemed €750 million worth of perpetual deeply subordinated notes issued in 2018 and recognised as liabilities in the balance sheet under “Non-controlling interests”. The buyback was carried out in two stages, in January 2025 for €404 million and then in November 2025 for €346 million.

1.1.6.1.3 La Banque Postale green bond issuance and bond redemption

On 12 June 2025, La Banque Postale Home Loan SFH, a subsidiary of La Banque Postale, carried out a green covered bond issuance. A total of €1 billion worth of seven-year covered bonds were issued with a final spread of MS +52 bps and a coupon of 2.750%. The bonds qualify as debt instruments.

On 25 October 2025, La Banque Postale redeemed in advance of term €500 million worth of subordinated notes issued in October 2020 that paid interest at a fixed rate of 0.875%.

1.1.6.1.4 CNP Assurances subordinated note issue

In early July 2025, CNP Assurances completed the issue of €500 million worth of perpetual subordinated notes with a fixed-rate coupon of 5.50% and a first call date of 2 July 2032. These securities are recognised as liabilities in the balance sheet under “Non-controlling interests”.

1.1.6.2 Disposal of CNP Cyprus Insurance Holdings

On 16 April 2025, the sale of 100% of CNP Cyprus Insurance Holdings, which operates in the life and non-life insurance sectors

in Cyprus and Greece, was completed for a sale price of €182 million. The impact on the income statement was a loss of €13 million.

1.1.6.3 Disposal of CNP UniCredit Vita

On 20 June 2025, CNP Assurances SA announced the finalisation of the sale of CNP UniCredit Vita, a 51%-owned Italian subsidiary in exclusive partnership with UniCredit, for €594 million (€619 million, of which €25 million was received in the form of dividends).

This sale generated a capital gain of €116 million and follows the exercise by UniCredit of its call option on all the shares held by CNP Assurances, in accordance with their partnership agreements.

1.1.6.4 Alliance between CNP Assurances and Embracon in Brazil

CNP Assurances has signed an agreement with Embracon to strengthen its presence in Brazil. The proposed transaction provides for CNP Consórcio to be transferred to Embracon, followed by an acquisition of shares by CNP Assurances to raise its interest in

Embracon to 40%. Consequently, CNP Consórcio is now presented and accounted for in accordance with IFRS 5 – Non-current Assets Held for Sale and Discontinued Operations. No impairment losses have been recognised against this asset.

1.1.6.5 Agreement entered into with the non-controlling shareholders of BRT

On 3 July 2025, an agreement was entered into (effective 24 July 2025) to settle the proceedings brought by Geopost and BRT against BRT’s non-controlling shareholders. In the 2025 financial statements, the effects of this agreement were as follows:

- buyback by Geopost of the non-controlling interests in BRT for €60 million, increasing Geopost’s stake to 100% and generating a €55 million negative impact on equity attributable to owners of the parent in the consolidated financial statements;

- receipt and recognition as income of €70 million in compensation;
- €35.7 million discount on lease payments due for the period 2025-2031, resulting in a €195 million reduction in IFRS 16 lease liabilities at 31 December 2025.

It should also be noted that a reduction in the BRT acquisition price was recorded for €40 million and recognised as income.

1.2 Subsequent events

1.2.1 2026 exceptional levy on profits

The Finance Act of 2 February 2026 maintained the exceptional levy on the profits of large corporations. This 2026 tax is payable by companies with revenue of €1.5 billion or more in France. The rate remains unchanged at 20.60% or 41.20%, depending on the revenue made by the company. The exceptional levy is based on the average corporate income tax due in respect of the financial year in which it is payable and the previous financial year.

The 2026 levy relating to the portion based on the 2025 financial year was not recognised, since the relevant Finance Act enacting it was passed after 31 December 2025.

There were no other significant subsequent events likely to have a material impact on the financial statements and results of the Caisse des Dépôts Group at 31 December 2025.

1.3 Consolidated income statement, year ended 31 December 2025

<i>(in millions of euros)</i>	Notes	31.12.2025	31.12.2024
Interest income	2.2.1	18,041	19,072

1.7 Consolidated statement of cash flows

The statement of cash flows is prepared using the indirect method. Investing activities correspond to purchases and sales of interests in consolidated companies, property and equipment and intangible assets.

Financing activities are activities that result in changes in the size and composition of equity, subordinated debt and bond debt. Operating activities correspond to all cash flows that do not fall within the above two categories.

<i>(in millions of euros)</i>	31.12.2025	31.12.2024
Profit (loss) before tax (excluding discontinued operations)	4,583	4,647

2. Notes to the consolidated financial statements

2.1 Summary of significant accounting policies

2.1.1 Basis of preparation of the financial statements

The Caisse des Dépôts Group applies IFRS as adopted by the European Union at 31 December 2025. In particular, the Group decided to apply the provisions of Regulation No. 2086/2004 of the European Commission, adopting IAS 39 with the exception of certain provisions for the accounting of macro-hedge transactions (carve out). Regulation (EU) No. 2086/2004 makes it possible to select some of the macro-hedge transactions carried out as part of asset/liability management for fair value hedging relationships (including in particular customer demand deposits).

These standards are available on the European Commission's website at: https://finance.ec.europa.eu/capital-markets-union-and-financial-markets/company-reporting-and-auditing/company-reporting_en.

The consolidated financial statements at 31 December 2025 have been prepared in accordance with the recognition and measurement principles set out in the relevant IASs/IFRSs and IFRS IC (IFRIC) interpretations that were applicable at the end of the reporting period.

These standards and interpretations are identical to those used and described in the Caisse des Dépôts Group's financial statements at 31 December 2024, with the exception of the IFRS amendments described below (see section 2.1.1.1).

2.1.1.1 IFRS amendments that are mandatory as from 1 January 2025

The mandatory IFRS amendments effective as from 1 January 2025 are presented below. They are:

2.1.1.1.1 Amendments to IAS 21 "Lack of Exchangeability" (EU Regulation No. 2024/2862 of 12 November 2024)

These amendments provide guidance to specify when a currency is exchangeable and how to determine the exchange rate when it

is not. They also require the disclosure of additional information in the notes to the financial statements when a currency is not exchangeable.

They do not have an impact on the Caisse des Dépôts Group's consolidated financial statements.

2.1.1.2 IFRS standards, amendments and interpretations adopted by the European Union but not yet applied at 1 January 2025

The Caisse des Dépôts Group did not apply the standards amendments and interpretations adopted by the European Union and not yet mandatorily effective at 1 January 2025. These concern:

2.1.1.2.1 Amendments to IFRS 9 and IFRS 7 "Amendments to the Classification and Measurement of Financial Instruments" (EU Regulation No. 2025/1047 of 27 May 2025)

These amendments clarify the classification of financial assets with environment, social, governance (ESG) and similar features to help determine whether these assets meet the solely payments of principal and interest (SPPI) criterion.

These amendments also specify the conditions for derecognising financial liabilities settled through electronic payment systems.

The amendments also introduce new disclosure requirements for equity instruments designated at inception as at fair value through other comprehensive income and financial instruments with contingent features, such as instruments tied to ESG-linked targets.

They are applicable in reporting periods beginning on or after 1 January 2026 and are not expected to have a material impact on the Caisse des Dépôts Group's financial statements.

2.1.1.2.2 Amendments to IFRS 9 and IFRS 7 “Contracts Referencing Nature-dependent Electricity” (EU Regulation No. 2025/1266 of 30 June 2025)

These amendments apply only to contracts referencing nature-dependent electricity that expose the entity to variability in the underlying amount of electricity. These contracts include both contracts to buy or sell nature-dependent electricity and financial instruments that reference such electricity.

The contracts concerned can be settled:

- through physical delivery of the electricity bought or sold – power purchase agreement (PPA); or
- net in cash for the difference between the contract price and the market price – virtual power purchase agreement (VPPA).

These amendments clarify the conditions for applying the “own use” exemption allowing PPAs to be excluded from the scope of IFRS 9. They also specify how hedge accounting is to be applied to VPPAs. The amendments introduce disclosure requirements for both types of contract in order to understand their effects on the entity's financial performance and future cash flows.

2.1.1.3 IFRS standards, amendments and interpretations not yet adopted by the European Union at 31 December 2025

The Caisse des Dépôts Group did not apply the standards, amendments and interpretations published by the IASB and not yet adopted by the European Union at the end of the reporting period.

This mainly concerns IFRS 18 “Presentation and Disclosures in Financial Statements” adopted by the European Union on 13 February 2026 (EU Regulation No. 2026/338), which will not be effective until 1 January 2027.

IFRS 18 will supersede IAS 1 “Presentation of Financial Statements”. It will not change the rules for recognising and measuring assets, liabilities, income and expenses, but does affect their presentation in the publishable financial statements and the accompanying notes.

They are applicable in reporting periods beginning on or after 1 January 2026 and are not expected to have a material impact on the Caisse des Dépôts Group's financial statements.

2.1.1.2.3 “Annual Improvements to IFRS Accounting Standards – Volume 11” (EU Regulation No. 2025/1331 of 9 July 2025)

These annual improvements relate to IFRS 1 “First-time Adoption of International Financial Reporting Standards”, IFRS 7 “Financial Instruments: Disclosures”, IFRS 9 “Financial Instruments”, IFRS 10 “Consolidated Financial Statements” and IAS 7 “Statement of Cash Flows”. They aim to simplify and clarify existing standards on specific points where there are inconsistencies or where clearer wording is needed.

The improvements are applicable in reporting periods beginning on or after 1 January 2026 and are not expected to have a material impact on the Caisse des Dépôts Group's financial statements.

IFRS 18 incorporates many of the requirements of IAS 1 which are left unchanged, and adds new requirements relating to:

- the presentation of specific categories (operating, investing and financing) and subtotals in the income statement;
- information to be disclosed in the notes to the financial statements on management-defined performance measures (MPMs);
- the aggregation and disaggregation of quantitative information in the publishable financial statements and accompanying notes.

IFRS 18 will be applied retrospectively, and requires restatement of comparative information.

The impact of IFRS 18 on the Caisse des Dépôts Group's financial statements is currently being analysed.

2.1.1.4 Use of the Accounting Standards Authority (ANC) financial statement format for banks

In the absence of any requisite IFRS financial statement format, the presentation of the financial statements complies with Recommendation No. 2022-01 of 8 April 2022, issued by the *Autorité des normes comptables* (French accounting standards-setter – ANC), which provides for a change in the presentation of insurance activities in the financial statements of banking institutions, due to the first-time application of IFRS 17.

In accordance with revised IAS 1, the Caisse des Dépôts Group presents a separate consolidated income statement providing a breakdown of profit. It also presents a statement of comprehensive income which starts with profit and details gains and losses recognised directly in equity, net of tax.

The Caisse des Dépôts Group has also opted to present its insurance investments based on the same categories as the investment portfolios of the banking business.

2.1.1.5 Use of estimates

The preparation of the Group's financial statements involves making certain estimates and assumptions which affect the reported amounts of income and expenses, assets and liabilities, as well as the disclosures in the accompanying notes. To make any such estimates and assumptions, management is required to exercise judgement and consider information available when the financial statements are drawn up. The actual outcome of transactions for which estimates and assumptions are made could differ significantly from the anticipated outcome, particularly with respect to changes in market conditions, and this may have a material impact on the financial statements.

Estimates and assumptions are used to calculate:

- the fair value of unlisted financial instruments carried in the statement of financial position under: "Financial assets/liabilities at fair value through profit or loss", "Hedging instruments" or "Financial assets at fair value through other comprehensive income";
- any impairment taken on financial assets (financial assets at fair value through other comprehensive income to be reclassified to profit or loss, securities at amortised cost, loans and receivables at amortised cost);

This applies in particular to the assessment of whether an asset has been subject to a significant increase in credit risk, the models and assumptions used to measure expected credit losses, the determination and weighting of the various economic scenarios and the specific assessments related to the macroeconomic environment (see section 2.7.3.1.2.4 "Credit risk provisions" in the "Risk factors" note);

- any impairment taken on investments in equity-accounted companies;
- the fair value of investment property disclosed in the notes;
- any impairment taken on property and equipment, intangible assets and goodwill;
- the measurement of insurance and reinsurance contracts (cash flow projections and measurement assumptions for the various contracts);
- deferred tax;
- provisions reported in liabilities (including for employee benefits and housing savings) in respect of contingencies and expenses;
- the initial amount of goodwill recognised on business combinations;
- the carrying amount of non-current assets and related liabilities held for sale.

2.1.2 Basis of consolidation

2.1.2.1 Scope of consolidation

The consolidated financial statements comprise the financial statements of the Caisse des Dépôts Central Sector, the consolidated financial statements of the sub-groups and the financial statements

of entities over which Caisse des Dépôts exercises control, joint control or significant influence, whose consolidation has a material impact on the Group's financial statements.

2.1.2.2 Consolidation methods and definition of control

Investees (and structured entities) controlled by the Group are fully consolidated. Control is exercised when: the Group has the power to direct the investee's relevant activities; is exposed, or has rights, to variable returns from its involvement with the investee; and has the ability to affect those returns through its power over the investee.

Potential voting rights which give the option to acquire additional voting rights in an investee are taken into account to determine control when such rights are currently exercisable in such a way as to allow the investor to direct the relevant activities of the investee.

Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control. Joint control may involve two types of arrangement: a joint venture or a joint operation.

A joint venture is a joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the arrangement. Joint ventures are accounted for by the equity method.

A joint operation is an arrangement whereby the parties that have joint control have rights to the assets and bear responsibility for the liabilities of the arrangement. A joint operation is consolidated by recognising the Caisse des Dépôts Group's interest in said operation:

- assets, including its share of any assets held jointly;
- liabilities, including its share of any liabilities incurred jointly;

- revenue from the sale of its share of the output of the joint operation and from the sale of the output by the joint operation; and
- expenses, including its share of any expenses incurred jointly.

Entities over which the Group exercises significant influence are accounted for by the equity method. Significant influence is the power to participate in the financial and operating policy decisions of an entity but is not control or joint control over those policies. Significant influence is presumed to be exercised when the Group holds, directly or indirectly, 20% or more of the voting power of the investee.

The results of acquired entities are included in the consolidated financial statements from the effective acquisition date, while the results of entities sold during the period are included up to the date when control, joint control or significant influence is relinquished.

2.1.2.2.1 Financial year-end

Almost all consolidated companies have a 31 December year-end. Companies whose financial year-end is more than three months before or after the Group's year-end are consolidated based on financial statements drawn up at 31 December. In the case of companies whose financial year-end falls within three months of the Group's year-end, any material transactions occurring between their year-end and 31 December are taken into account in preparing the consolidated financial statements when this is necessary to comply with the true and fair view principle.

2.1.2.3 Companies excluded from the scope of consolidation

Investments in associates and joint ventures held in connection with the Group's private equity activity may be excluded from the scope of consolidation, in accordance with the option available under IAS 28.18. These investments are then recognised as "Financial assets at fair value through profit or loss".

Low-cost housing companies (ESHs) are excluded from the scope of consolidation because they are not controlled by the Group within the meaning of IFRS. Shares in ESHs are therefore recognised as "Financial assets at fair value through profit or loss" or, under the option provided for, as "Financial assets at fair value through other comprehensive income not to be reclassified to profit or loss".

Semi-public companies (SEMs, SAIEMs) not controlled by the Caisse des Dépôts Group are also excluded from the scope of consolidation.

Shares in these companies are therefore recognised as "Financial assets at fair value through profit or loss" or, under the option provided for, as "Financial assets at fair value through other comprehensive income not to be reclassified to profit or loss".

Shares in companies acquired with the intention of being sold in the near term are excluded from the scope of consolidation and classified as "Non-current assets held for sale".

In application of IFRS, the agreements signed with the French State concerning the Investments for the Future Programme require the assets and liabilities covered by said agreements to be derecognised in the Group's consolidated financial statements. In the French GAAP accounts of the Central Sector, these assets and liabilities are transferred to adjustment accounts.

2.1.2.4 Consolidation adjustments and intra-group eliminations

The financial statements of consolidated companies are restated based on Group accounting policies when the effects of the restatement are material. The accounting policies applied by associates and joint ventures are aligned with Group policies where necessary.

Intra-group balances, income and expenses between fully consolidated companies are eliminated when their impact on the consolidated financial statements is material.

Gains and losses on intra-group sales of assets to associates and joint ventures are eliminated proportionately, based on the Group's percentage interest in the associate or joint venture.

2.1.2.5 Foreign currency translation

The consolidated financial statements are presented in euros. The financial statements of entities whose functional currency is different from the Group's presentation currency are translated by the closing rate method. Under this method, all monetary and non-monetary assets and liabilities are translated at the exchange rate at the end of the reporting period, while income and expenses are translated at the average exchange rate for the period (provided that exchange rates do not fluctuate significantly during that period). The differences arising from translation are recognised in equity in the statement of financial position under "Gains and losses recognised directly in equity".

Gains and losses arising from the translation of the net investment in foreign operations, borrowings and foreign exchange instruments that are effective hedges of these investments are deducted from equity.

When the foreign operation is sold, the cumulative exchange differences recorded in equity are recognised in the income statement as part of the gain or loss on the sale.

2.1.2.6 Business combinations and goodwill

Business combinations are accounted for using the purchase method except for jointly controlled business combinations and a newly formed joint venture, which are excluded from the scope of IFRS 3.

Under the purchase method, the identifiable assets acquired and liabilities assumed are recognised at acquisition-date fair value.

Any contingent liabilities assumed are only recognised in the consolidated statement of financial position if they represent a current obligation at the date control is acquired, and the fair value of that obligation can be measured reliably.

The cost of a combination (consideration transferred) is equal to the fair value, at the date of exchange, of the assets transferred, liabilities incurred or assumed and any equity instruments issued by the Group, in exchange for control of the acquiree. Costs directly attributable to the business combination are treated as a separate transaction and are recognised in profit or loss.

Any contingent consideration is included in the cost of the combination as of the date control is acquired, for its fair value at the acquisition date. Any earn-out adjustments classified as financial liabilities are remeasured at fair value at the end of each reporting period and taken to profit or loss, unless these adjustments occur within 12 months of the date of the combination and relate to facts and circumstances existing at the acquisition date.

Goodwill represents the excess of the cost of the combination over the acquirer's share in the acquisition-date fair value of the identifiable assets and liabilities and, at that date, is recognised in assets in the consolidated statement of financial position, under "Goodwill". Negative goodwill is recognised directly in profit or loss.

Non-controlling interests may be carried at either their share in the net identifiable assets of the acquiree ("partial" goodwill method) or at their fair value, in which case they are allocated a percentage of the corresponding goodwill ("full" goodwill method). This decision can be renewed for each business combination.

The initial accounting for a business combination spans up to 12 months after the acquisition date.

Goodwill is initially measured in the statement of financial position at cost in the currency of the acquiree and is translated at the exchange rate at the end of the reporting period.

Goodwill is tested for impairment, as explained in section 2.1.3.11.

When a business combination is carried out in stages (step acquisition), goodwill is determined by reference to the fair value at the date control is obtained. At this date, any previously-held

interest in the acquiree is remeasured at fair value through profit or loss or against equity within "Gains and losses recognised directly in equity" in the statement of financial position.

Similarly, a loss of control of a consolidated subsidiary requires the remaining holding to be remeasured at fair value through profit or loss.

2.1.2.7 Transactions with non-controlling interests

The Caisse des Dépôts Group recognises in equity any difference between the cost of the shares and its share in the acquiree's adjusted net assets for transactions involving the acquisition of non-controlling interests in an entity already controlled by the Group. Costs directly attributable to the acquisition are recognised as a deduction from equity.

Partial sales of non-controlling interests which do not result in a loss of control are recognised by adjusting equity.

2.1.2.8 Repurchase commitments granted to non-controlling shareholders of fully consolidated subsidiaries

Pursuant to the provisions of IAS 32 "*Financial Instruments: Presentation*", the Caisse des Dépôts Group records a financial liability in respect of put options granted to non-controlling shareholders of consolidated subsidiaries. Where the value of the option exceeds the amount of non-controlling interests, IFRS standards do not specify how the difference should be recognised.

The Caisse des Dépôts Group has chosen to recognise the difference between the option and the amount of non-controlling interests in equity. Subsequent changes in the liability relating to changes in the estimated exercise price of the option and the carrying amount of non-controlling interests are recognised in equity.

2.1.2.9 Segment information

In accordance with IFRS 8, the segment information presented is based on internal reports used by the Group's senior management and reflects the Group's internal business organisation. Operating activities are organised and managed based on the type of service provided.

The Caisse des Dépôts Group's business segments at 31 December 2025 – with no change from 31 December 2024 – are:

- Caisse des Dépôts division, consisting mainly of:
 - Caisse des Dépôts – Central Sector,
 - SCET,
 - CDC Habitat;
- Bpifrance group;
- La Poste Groupe;
- Management of Strategic Investments division, consisting mainly of:
 - Financial Services:
 - SFIL group,
 - Sicovam Holding,
 - Euroclear Holding SA N/V,
 - Euronext N.V;
 - Real Estate & Tourism:
 - Icade,
 - Compagnie des Alpes;

- Infrastructure:
 - Coentreprise de Transport d'Électricité,
 - Holding d'Infrastructures Gazières,
 - Coriance group;
- Services, Transport & Engineering:
 - Egis,
 - Transdev group,
 - Suez Holding,
 - STOA,
 - emeis.

2.1.2.9.1 Banque des Territoires

The Banque des Territoires brand brings together all Caisse des Dépôts' activities promoting regional development. It encompasses the operational departments (banking, investor, lender) of the Central Sector and Savings Funds, and relies on a network of 37 offices with functional departments (finance, communication, digital strategy and human resources). It also encompasses two subsidiaries, CDC Habitat and SCET, which support regional players in engineering and consulting. The Savings Funds are not consolidated in the Caisse des Dépôts Group's consolidated financial statements.

2.1.3 Accounting policies

2.1.3.1 Financial instruments

Financial assets and liabilities are recognised in accordance with the provisions of IFRS 9 and with the amendments to IFRS 9 “*Prepayment Features with Negative Compensation*”.

IFRS 9 sets out the principles for the classification and measurement of financial instruments, impairment of credit risk and hedge accounting excluding macro-hedges, for which the Group applies the IAS 39 carve-out provisions adopted by the European Union.

2.1.3.1.1 Measurement of financial assets and liabilities

2.1.3.1.1.1 Initial recognition date

Securities are recorded on the statement of financial position on the settlement-delivery date, while derivative financial instruments are recorded on the trade date. Loans and receivables are recorded in the statement of financial position on the disbursement date.

Changes in fair value between the trade date and the settlement-delivery date are recognised in income or equity depending on the accounting category of the financial instruments concerned.

2.1.3.1.1.2 Initial measurement

On initial recognition, financial assets and liabilities are measured at fair value as defined by IFRS 13, plus (in the case of financial assets) or less (in the case of financial liabilities) transaction costs directly attributable to the acquisition or issue. This is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (see section 2.1.3.1.7).

2.1.3.1.1.3 Subsequent measurement

After initial recognition, non-derivative financial assets and liabilities are measured based on their classification, either at amortised cost using the effective interest rate method or at fair value as defined by IFRS 13. Derivative financial instruments are always measured at fair value.

Amortised cost corresponds to the amount at which the financial asset or financial liability is measured on initial recognition, minus principal repayments, plus or minus the cumulative amortisation using the effective interest rate method of any difference between the initial amount and the maturity amount and, for a financial asset, minus impairment for credit risk, if any.

The effective interest rate is the rate that discounts estimated future cash payments or receipts through the expected life of the financial asset or financial liability, in order to obtain the exact gross carrying amount of the financial asset (i.e., amortised cost without taking into account any impairment for credit risk) or the amortised cost of the financial liability.

This calculation incorporates fees and commissions paid or received between the parties to the contract, transaction costs and all premiums and discounts.

2.1.3.1.2 Recognition of financial assets

Recognition of financial assets depends on the business model and the characteristics of the contractual cash flows of the instruments (see section 2.1.3.1.2.3).

2.1.3.1.2.1 Business models

Business model refers to how an entity manages its financial assets for the purpose of achieving a particular economic objective. IFRS 9 defines three types of business model:

- The “hold-to-collect model”, the objective of which is to hold financial assets in order to collect contractual cash flows. This model, under which the concept of holding is fairly close to that of holding to maturity, remains valid if disposals occur under the following conditions:
 - the disposals are due to an increase in credit risk,
 - the disposals occur just before maturity and at a price that reflects the contractual cash flows that are still due,
 - other disposals are consistent with the objectives of the “hold-to-collect model” if they are infrequent (even if their value is significant) or if their value is insignificant when considered both individually and overall (even if they are frequent);
- The “mixed model”, the objective of which is both to collect contractual cash flows and to sell financial assets. In this model, the collection of cash flows and the sale of financial assets are both essential;
- The “other models”, which are defined in opposition to the “hold-to-collect model” and the “mixed model”. They concern portfolios of instruments whose objective is to collect contractual cash flows by selling financial assets or those that are managed and whose performance is evaluated based on fair value.

2.1.3.1.2.2 Contractual cash flow characteristics of the instruments (Solely Payments of Principal and Interest (SPPI) criterion)

A financial asset is deemed SPPI (or “basic”) if the contractual terms of the asset give rise, on specified dates, to cash flows corresponding solely to payments of principal and interest calculated on the principal amount outstanding. On initial recognition, every asset should be tested to determine whether it meets the SPPI criterion (SPPI test).

Principal is defined as the acquisition-date fair value of the financial asset. Interest consists of consideration for the time value of money and the credit risk associated with the principal amount, as well as other risks such as liquidity risk, administrative costs and margin.

To assess whether contractual cash flows are solely payments of principal and interest, the contractual terms of the instrument should be taken into account. Any information that may cast doubt on whether only the time value of money and credit risk are represented must therefore be analysed. For example:

- Events that would change the amount and timing of the cash flows.
Any contractual terms that generate exposure to risks or volatility in cash flows that are unrelated to a basic lending arrangement, such as exposure to changes in equity prices or a stock market index, or the introduction of leverage, would make it impossible to categorise contractual cash flows as SPPI.
- The characteristics of the applicable interest rates (for example, consistency between the rate refixing period and the interest calculation period).
If a qualitative analysis does not provide a clear result, a quantitative analysis (benchmark test) is carried out. This involves comparing the contractual cash flows of the asset in question with the contractual cash flows of a benchmark asset. If the difference between the cash flows of the asset in question and the cash flows of the benchmark asset is deemed insignificant, the asset is considered to be a basic lending arrangement that satisfies the SPPI criterion.
- Prepayment and extension features.

A contractual term that permits the borrower or lender to prepay the financial instrument remains consistent with the SPPI criterion for contractual cash flows if the prepayment amount substantially represents the principal amount outstanding and the related interest, as well as reasonable additional compensation, if applicable.

Furthermore, although they do not strictly meet the criteria for consideration for the time value of money, certain assets with a regulated rate are considered “basic” if that regulated interest rate provides consideration that is broadly consistent with the passage of time and does not generate exposure to risks or volatility in the contractual cash flows that are inconsistent with a basic lending arrangement.

To qualify as “basic” financial assets, the securities held in a securitisation vehicle must meet specific conditions. The contractual terms of the tranche must meet the SPPI criterion, as must the pool of underlying assets. The risk inherent in the tranche must be lower than or equal to the exposure to the underlying assets of the tranche.

2.1.3.1.2.3 Classification and measurement of financial assets

Financial assets are classified on the statement of financial position in the following three accounting categories: amortised cost, fair value through other comprehensive income and fair value through profit or loss, depending on the business models and the characteristics of the contractual cash flows associated with the instruments (see sections 2.1.3.1.2.1 and 2.1.3.1.2.2).

Debt instruments (loans, receivables, securities)

Debt instruments (loans, receivables, securities) may be recognised at amortised cost, at fair value through other comprehensive income to be reclassified to profit or loss, or at fair value through profit or loss.

Debt instruments recognised at amortised cost

Debt instruments are measured at amortised cost if the business model consists in holding the instrument to collect the contractual cash flows (“hold-to-collect model”) and if the cash flows are solely payments of principal and interest on the principal amount outstanding (SPPI criterion).

Financial assets measured at amortised cost are initially recognised at fair value, which includes transaction costs and accrued interest (unless it can be demonstrated that the transaction costs are not material).

These financial assets are subsequently measured at amortised cost using the effective interest rate method.

The amortisation of any premiums/discounts and transaction costs over the remaining life of these instruments is recognised in profit or loss using the effective interest rate method, under “Interest income” in the income statement.

These financial assets are impaired under the conditions described in “Impairment for credit risk” (see section 2.1.3.1.4).

They are reported in the statement of financial position under “Securities at amortised cost”, “Loans and receivables due from credit institutions and related entities at amortised cost”, and “Loans and receivables due from customers at amortised cost”, depending on the type of instrument.

Debt instruments recognised at fair value through other comprehensive income to be reclassified to profit or loss

Debt instruments are measured at fair value through other comprehensive income to be reclassified to profit or loss if the business model consists of holding the instrument to collect the contractual cash flows and sell the assets (“mixed model”) and if the cash flows are solely payments of principal and interest on the principal amount outstanding (SPPI criterion).

Financial assets measured at fair value through other comprehensive income to be reclassified to profit or loss are initially recognised at fair value, which includes transaction costs and accrued interest (unless it can be demonstrated that the transaction costs are not material).

These financial assets are subsequently measured at fair value, with changes in fair value recognised in other comprehensive income to be reclassified to profit or loss with a corresponding entry against the outstanding amount (excluding accrued interest, which is recognised using the effective interest rate method under “Interest income” in the income statement).

The amortisation of any premiums/discounts and transaction costs over the remaining life of these instruments is also recognised in profit or loss using the effective interest rate method, under “Interest income” in the income statement.

When the assets are sold, the unrealised gains or losses previously recognised in equity are reclassified to the income statement under “Net gains and losses on financial instruments at fair value through other comprehensive income”.

These financial assets are impaired under the conditions described in “Impairment for credit risk” (without affecting the fair value in the statement of financial position) (see section 2.1.3.1.4).

They are reported in the statement of financial position under “Financial assets at fair value through other comprehensive income”.

Debt instruments recognised at fair value through profit or loss

Any debt instruments that are not eligible to be recognised at amortised cost or at fair value through other comprehensive income to be reclassified to profit or loss are measured at fair value through profit or loss.

This category includes:

- Debt instruments classified in portfolios made up of financial assets:
 - that are held for trading or whose primary objective is disposal, or
 - that are managed and whose performance is evaluated on a fair value basis.

In both of the above-mentioned portfolio categories, even though contractual cash flows are collected while the entity holds the assets, the collection of those contractual cash flows is not integral but incidental.

- Debt instruments that do not meet the SPPI criterion, which is particularly the case for mutual funds (UCITS) and venture capital funds (FCPR).
- Debt instruments classified in portfolios for which the entity expressly chooses the fair value through profit or loss approach in order to eliminate or reduce an accounting treatment mismatch in the measurement or recognition that would otherwise arise from the measurement of assets or liabilities on different bases.

In that case, the financial asset is classified under the fair value option at fair value through profit or loss on initial recognition, and this classification is irrevocable.

Financial assets measured at fair value through profit or loss are initially recognised at fair value, excluding transaction costs (which are recognised directly in profit or loss) but including accrued interest.

These financial assets are subsequently measured at fair value, with changes in fair value recognised in profit or loss under “Net gains and losses on financial instruments at fair value through profit or loss” with a corresponding entry against the outstanding amount.

These financial assets are not impaired.

They are reported in the statement of financial position under “Financial assets at fair value through profit or loss”.

Equity instruments (shares)

Investments in equity instruments (such as shares) are measured at fair value through profit or loss or, under the option provided for, at fair value through other comprehensive income not to be reclassified to profit or loss.

Equity instruments are not impaired.

Equity instruments recognised at fair value through profit or loss

Equity instruments measured at fair value through profit or loss are initially recognised at fair value, excluding transaction costs (which are recognised directly in profit or loss).

These equity instruments are subsequently measured at fair value, with changes in fair value recognised in profit or loss under “Net gains and losses on financial instruments at fair value through profit or loss” with a corresponding entry against the outstanding amount.

They are reported in the statement of financial position under “Financial assets at fair value through profit or loss”.

Equity instruments recognised at fair value through other comprehensive income not to be reclassified to profit or loss (irrevocable election)

The irrevocable election to recognise equity instruments at fair value through other comprehensive income not to be reclassified to profit or loss is evaluated at the transaction level (line by line) and must be applied on initial recognition of the instrument (or on first-time adoption of IFRS 9 at 1 January 2018). Equity instruments held for trading are not eligible for this option.

Equity instruments measured at fair value through other comprehensive income not to be reclassified to profit or loss are initially recognised at fair value, including transaction costs (unless it can be demonstrated that the transaction costs are not material).

These equity instruments are subsequently measured at fair value, with changes in fair value recognised in other comprehensive income not to be reclassified to profit or loss under “Other comprehensive income” in the statement of financial position.

When the equity instruments are sold, unrealised gains and losses previously recognised in other comprehensive income are not reclassified to profit or loss. The gain or loss on disposal is thus still recognised in other comprehensive income.

However, the Caisse des Dépôts Group has chosen to reclassify to “Reserves and retained earnings” the share of other comprehensive income not to be reclassified to profit or loss recognised under “Other comprehensive income” corresponding to any capital gain or loss recorded on disposal.

Only dividends are recognised in profit or loss under “Net gains and losses on financial instruments at fair value through other comprehensive income” if they correspond to a return on investment and not to redemption of the equity instrument.

They are reported in the statement of financial position under “Financial assets at fair value through other comprehensive income”.

2.1.3.1.2.4 Reclassification of financial assets

Reclassifications of financial assets are not permitted, except in the case of a significant change in the business model for managing financial assets.

Such changes are expected to be infrequent (mainly when the entity begins or ceases to perform an activity that is significant to its operations) and must be determined by the entity’s management body.

In that case, all of the portfolio’s financial assets must be reclassified. This reclassification is prospective as from the date of reclassification and no gain, loss or interest recognised prior to that date should be restated.

2.1.3.1.2.5 Derecognition of financial assets

A financial asset is fully or partially derecognised:

- if the contractual rights to the cash flows from the financial asset expire; or
- if the contractual rights to the cash flows and substantially all of the risks and rewards incidental to ownership of this financial asset are transferred.

In that case, the financial asset is derecognised and all the rights and obligations created or retained in the transfer are recognised separately as assets and liabilities.

If the contractual rights to the cash flows are transferred but only some of the risks and rewards incidental to ownership of the financial asset, as well as control, are retained, the entity continues to recognise the financial asset to the extent of its continuing involvement in that asset.

Financial assets renegotiated for business reasons in the absence of financial difficulty of the counterparty and with the aim of developing or maintaining a business relationship are derecognised on the renegotiation date. The new loans granted to customers are recognised on this date for their fair value at the renegotiation date. Subsequent recognition depends on the business model and on whether or not the SPPI criterion has been met (see section 2.1.3.1.2.3).

2.1.3.1.2.6 Temporary acquisitions and disposals of securities

Temporary disposals of securities (lending of securities, securities sold under repurchase agreements) generally do not meet the conditions for derecognition.

Securities lent or sold under a repurchase agreement continue to be shown on the statement of financial position of the lender/seller. For securities sold under a repurchase agreement, the amount received, representing the liability to the acquirer, is recognised on the liabilities side of the statement of financial position by the seller.

Securities borrowed or acquired under a repurchase agreement are not shown on the statement of financial position of the borrower/acquiree. For securities acquired under a repurchase agreement, a claim against the seller is recognised on the acquiree's statement of financial position as consideration for the amount paid. If the security is subsequently resold, the acquiree records a liability measured at fair value which represents its obligation to return the security acquired under a repurchase agreement.

2.1.3.1.3 Recognition of financial liabilities

2.1.3.1.3.1 Distinction between debt and equity

The distinction between debt instruments and equity instruments is based on an analysis of the economic substance of the contractual arrangements.

A financial liability is a debt instrument if it includes a contractual obligation:

- to deliver cash, another financial asset or a variable number of equity instruments to another entity; or
- to exchange financial assets or financial liabilities with another entity under potentially unfavourable conditions.

An equity instrument is a non-redeemable financial instrument which offers a discretionary payment that evidences a residual interest in a company after deducting all its financial liabilities (net assets) and which is not qualified as a debt instrument.

Undated subordinated notes are therefore classified as equity instruments when the timing of interest payments is determined by the Group. All other dated and undated debt instruments are included in debt.

2.1.3.1.3.2 Classification and measurement of financial liabilities

Financial liabilities are classified on the statement of financial position in the following two accounting categories: fair value through profit or loss (because of their nature or under the fair value option) and amortised cost.

Financial liabilities recognised at fair value through profit or loss because of their nature

Financial liabilities issued primarily for the purpose of repurchasing them in the near term, those forming part of a portfolio of identified financial instruments that are managed together for the purpose of generating a profit due to short-term price fluctuations, and those that meet the definition of derivatives (with the exception of designated and effective hedging instruments) are recognised at fair value through profit or loss because of their nature.

Financial liabilities measured at fair value through profit or loss because of their nature are initially recognised at fair value, excluding transaction costs (which are recognised directly in profit or loss) but including accrued interest.

These financial liabilities are subsequently measured at fair value, with changes in fair value recognised in profit or loss under "Net gains and losses on financial instruments at fair value through profit or loss" with a corresponding entry against the outstanding amount.

They are reported in the statement of financial position under "Financial liabilities at fair value through profit or loss".

Financial liabilities recognised at fair value through profit or loss under the fair value option

Financial liabilities that meet one of the three following conditions may be recognised at fair value through profit or loss under the fair value option:

- financial liability consisting of a separable embedded derivative that the entity does not want to separate or cannot separate;

- the entity's intention to eliminate or reduce an accounting treatment mismatch in the measurement or recognition that would otherwise arise from the measurement of assets or liabilities on different bases;
- management of a group of financial liabilities (or of a group of financial assets and financial liabilities) and evaluation of performance on a fair value basis in accordance with a documented risk management or investment strategy.

This option is exercised on initial recognition of the financial liability and is irrevocable.

Financial liabilities measured at fair value through profit or loss under the fair value option are initially recognised at fair value, excluding transaction costs (which are recognised directly in profit or loss) but including accrued interest.

These financial liabilities are subsequently measured at fair value, with changes in fair value recognised:

- in profit or loss for changes in fair value not related to credit risk (in the income statement under "Net gains and losses on financial instruments at fair value through profit or loss");
- in other comprehensive income not to be reclassified to profit or loss for changes in fair value related to credit risk (in the statement of financial position under "Other comprehensive income").

They are reported in the statement of financial position under "Financial liabilities at fair value through profit or loss".

Financial liabilities recognised at amortised cost

All other liabilities that meet the definition of financial liability (excluding derivatives) are measured at amortised cost.

Financial liabilities measured at amortised cost are initially recognised at fair value, which includes transaction costs and accrued interest (unless it can be demonstrated that the transaction costs are not material).

These financial liabilities are subsequently measured at amortised cost using the effective interest rate method.

They are reported in the statement of financial position under "Debt securities", "Due to credit institutions" and "Due to customers" depending on the type of instrument.

2.1.3.1.3.3 Reclassification of financial liabilities

The initial classification of financial liabilities is irrevocable. No subsequent reclassification is permitted.

2.1.3.1.3.4 Derecognition of and changes in financial liabilities

A financial liability is fully or partially derecognised:

- when it is extinguished, i.e., when the obligation specified in the contract is discharged, cancelled or expires; or
- when quantitative or qualitative analyses indicate that it has been substantially modified.

A substantial modification of an existing financial liability must be accounted for as an extinguishment of the original financial liability and the recognition of a new financial liability. The difference between the carrying amount of the extinguished financial liability and the new financial liability is recognised immediately in profit or loss.

If the financial liability is not derecognised, the original effective interest rate is maintained. A discount/premium is recognised immediately in profit or loss on the date of the modification, and is then amortised at the original effective interest rate over the remaining life of the instrument.

2.1.3.1.4 Impairment for credit risk

Credit risk is defined as the risk of loss arising from the default by a counterparty resulting in its inability to meet its commitments to the Caisse des Dépôts Group.

IFRS 9 has introduced an impairment model based on expected credit losses (ECL), which aims to anticipate the recognition of credit losses at the earliest possible stage.

2.1.3.1.4.1 Scope of the ECL impairment model

The ECL impairment model applies to the following assets, if they are not measured at fair value through profit or loss:

- financial assets qualified as debt instruments recognised at amortised cost or at fair value through other comprehensive income to be reclassified to profit or loss (loans, receivables, securities);
- lease receivables that fall within the scope of IFRS 16;
- trade receivables and contract assets generated by transactions that fall within the scope of IFRS 15;
- guarantee commitments that fall within the scope of IFRS 9 (see section 2.1.3.1.9);
- financing commitments (see section 2.1.3.1.10).

Equity instruments, whether recognised at fair value through profit or loss or, under the option provided for, at fair value through other comprehensive income not to be reclassified to profit or loss, are therefore not affected by the impairment provisions.

2.1.3.1.4.2 Models based on expected credit losses

Credit losses correspond to the difference between all the cash flows that are due to an entity in accordance with the contractual provisions and all the cash flows that the entity expects to receive, discounted at the original effective interest rate.

The cash flows that the entity expects to receive must include flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms of the financial instrument.

Expected credit losses therefore correspond to the weighted average of credit losses based on the counterparty's default risk.

General ECL model

The general ECL model relies on a three-stage approach to risk based on the extent of the deterioration in the credit quality of a financial asset since initial recognition:

- **Stage 1 (Bucket 1):** this risk level includes all financial assets on initial recognition as well as on subsequent measurement, if they have not had a significant increase in credit risk since initial recognition.

The entity recognises 12-month expected credit losses for these financial assets. Interest income is recognised through profit or loss using the effective interest rate method applied to the gross carrying amount of the assets (i.e., amortised cost before recognition of impairment).

- **Stage 2 (Bucket 2):** this risk level consists of financial assets that have had a significant increase in credit risk since their initial recognition.

The entity recognises lifetime expected credit losses for the financial instrument. Interest income is recognised through profit or loss using the effective interest rate method applied to the gross carrying amount of the assets (i.e., amortised cost before recognition of impairment).

Thereafter, if credit quality subsequently improves to the point that the increase in credit risk since initial recognition is no longer considered significant, impairment for credit risk is once again measured based on 12-month expected credit losses. In that case, the financial asset is reclassified to Stage 1.

- **Stage 3 (Bucket 3):** this risk level comprises credit-impaired financial assets for which there is objective evidence of impairment. These are financial assets where one or more events that have a detrimental impact on their estimated future cash flows have occurred since initial recognition. This level of risk therefore consists of financial assets that are in default (non-performing).

The entity recognises lifetime expected credit losses for the financial instrument. Interest income is recognised through profit or loss using the effective interest rate method applied to the net carrying amount of the assets (i.e., amortised cost after impairment).

Thereafter, if credit quality subsequently improves, the financial asset is reclassified to Stage 2, then potentially to Stage 1. The procedures for measuring impairment for credit risk and interest income are then modified accordingly.

Simplified ECL model for trade receivables, contract assets and operating lease receivables

A simplified approach has been introduced under IFRS 9 for trade receivables and contract assets that fall within the scope of IFRS 15, as well as for lease receivables that fall within the scope of IFRS 16. When applying this simplified approach, which allows entities to avoid monitoring changes in the credit quality of the receivable and calculating the 12-month expected loss, impairment is always equal to lifetime expected credit losses.

This simplified approach is mandatory for trade receivables and contract assets that do not contain a significant financing component. It is optional for trade receivables and contract assets that contain a significant financing component, as well as for lease receivables, with the possibility of applying this option separately to lease receivables on finance leases and operating leases.

The Caisse des Dépôts Group has decided to use this simplified approach to calculate impairment of operating lease receivables, as well as of trade receivables and contract assets that contain a significant financing component. The general ECL model is applied to finance lease receivables.

Lifetime expected credit losses are therefore measured for all trade receivables, contract assets and operating lease receivables (which are assigned to Stage 2 or Stage 3).

2.1.3.1.4.3 Significant increase in credit risk, definition of default (non-performing) and objective evidence of impairment

In the general ECL model (see section 2.1.3.1.4.2), classification to the different risk levels is based on the concepts of significant increase in credit risk, default (non-performing) and objective evidence of impairment.

Significant increase in credit risk

Significant increase in credit risk is assessed on an individual basis or, where applicable, on the basis of homogeneous portfolios of assets, if information about the significant deterioration is not identifiable on an individual financial asset level.

To make the assessment, account is taken of all reasonable and supportable information that is available without undue cost or effort, by comparing the risk of default on a financial instrument at the reporting date with the risk of default on the same instrument on initial recognition. This assessment must take account of information about past events, current conditions and reasonable and supportable projections about future economic conditions and events (forward-looking information).

A transfer from Stage 1 to Stage 2, reflecting a significant increase in credit risk, should typically be recognised before the transaction is impaired on an individual basis due to the existence of objective evidence of impairment and before the loan is classified in Stage 3.

The Caisse des Dépôts Group also makes significant use of the rebuttable presumption provided for under IFRS 9 to consider that the credit risk on a financial asset has increased significantly since initial recognition when contractual payments are more than 30 days past due.

Conversely, IFRS 9 provides that if the default risk is considered low at the reporting date and if the borrower has a strong capacity to meet its contractual cash flow obligations in the near term without this capacity being significantly reduced by adverse changes in economic conditions in the longer term, it may be assumed that the credit risk on a financial asset has not increased significantly since initial recognition. Any collateral held on financial assets is not taken into consideration in this judgement.

This rule is applied by the Caisse des Dépôts Group to a significant extent, notably to monitor the deterioration in investment grade securities.

Default (non-performing)/Objective evidence of impairment

The definition of default (non-performing) for the purposes of measuring expected credit losses is identical to that used for the purposes of internal credit risk management.

The Group applies the definition of default for prudential purposes as set out in articles 127 and 178 of Regulation (EU) No. 575/2013 together with European Banking Authority guidelines 2016/07.

The new definition of default sees (i) the introduction of new absolute and relative materiality thresholds to be applied to amounts past due in order to determine whether a default has occurred and (ii) clarification of the criteria for return to non-default status, involving a probationary period.

The clarifications on how to identify a default remain consistent with the criteria for treating an exposure as credit-impaired under IFRS 9 (assigning it to Stage 3).

An exposure is considered to be in default (non-performing) when at least one of the following two conditions is met:

- a payment is more than 90 days past due and exceeds the regulatory materiality threshold, unless specific circumstances show that the arrears are due to reasons unrelated to the debtor's financial situation;
- the entity believes that the debtor is unlikely to meet all its credit obligations without recourse to measures such as the enforcement of collateral.

A loan in default (non-performing) is said to be credit-impaired when one or more observable events that have a detrimental impact on this financial asset's estimated future cash flows have occurred.

These observable events, used for a Stage 3 risk classification and which reflect the existence of a known credit risk, are:

- significant financial difficulty of the issuer or the borrower;
- a breach of contract (past-due event);
- the lender, for reasons relating to the borrower's financial difficulty, having granted to the borrower concessions at very favourable conditions that it would not have otherwise considered (extension, lower rate, etc.);
- the borrower's bankruptcy or financial reorganisation;
- the disappearance of an active market for that financial asset because of financial difficulties.

The default status shall apply for a probationary period of three months after all aforementioned default indicators are no longer present. This probationary period is extended to one year for loans that have undergone distressed restructuring and have been transferred to Stage 3.

2.1.3.1.4.4 Measurement of expected credit losses

The methods for calculating expected credit losses are implemented independently in each Caisse des Dépôts Group entity given the wide variety of their businesses. These calculation methods may also differ within a single entity, depending on the portfolios of financial assets held and the information available on these portfolios.

General ECL measurement model

To measure expected credit losses, the Caisse des Dépôts Group entities that conduct banking operations (mainly La Poste Groupe with its subsidiary La Banque Postale, the Caisse des Dépôts Central Sector, SFIL group and the Bpifrance group) rely largely on concepts and procedures that already exist as part of their supervisory monitoring framework.

The general methodology for calculating expected credit losses is thus based on three parameters:

- probability of default (PD);
- loss given default (LGD); and
- exposure at default (EAD).

The criteria for assigning assets to the different risk levels, which determine the method used to measure expected credit losses, are based on a comparison between the financial asset's PD on the reporting date and its initial recognition date (these PDs themselves result from the ratings assigned to counterparties from internal or external models) and on the default status (non-performing).

A financial asset is therefore generally assigned:

- to Stage 1 if its PD on the reporting date has not deteriorated significantly relative to its initial PD or if it is considered to have a low credit risk (investment grade);
- to Stage 2 if its PD on the reporting date has deteriorated significantly relative to its initial PD (use of transition matrices), if it has payments more than 30 days past due or if the counterparty is monitored as part of a watchlist;
- to Stage 3 if it has been impaired due to the existence of a known credit risk. In that case, the financial asset is in default (non-performing).

Expected credit losses are calculated as the product of PD multiplied by LGD and EAD for each weighted scenario developed.

The time horizon used for the ECL calculation depends on the risk level to which the financial assets have been assigned:

- one-year PD for financial assets classified to Stage 1;
- lifetime PD for financial assets classified to Stage 2.

The various parameters used to estimate expected credit losses (PD, EAD, LGD) rely on those used at the supervisory monitoring level (Basel parameters), which should be restated to comply with the requirements of IFRS 9.

Specific adjustments are therefore made to account for conditions on the reporting date and forward-looking macroeconomic projections:

- IFRS 9 parameters aim to estimate losses as accurately as possible for accounting provision purposes, whereas prudential parameters are generally more cautious for regulatory purposes. Several of these safety buffers are therefore restated;
- IFRS 9 parameters must allow losses to be estimated until the contract's maturity, whereas prudential parameters are defined to estimate one-year losses. One-year parameters are thus projected over long horizons;
- IFRS 9 parameters must be forward-looking and take into account the expected economic conditions over the projection horizon, whereas prudential parameters correspond to average cycle estimates. Prudential parameters are therefore also adjusted based on the expected economic conditions.

Parameters are adjusted to the economic environment by defining reasonable and supportable economic scenarios, combined with probabilities of occurrence. Three economic scenarios projected over several years (one core scenario and two alternative scenarios), provided by the Central Sector's economic research department, are used.

Once the parameters have been defined, expected credit losses can be measured for all rated exposures. For unrated exposures, prudent ECL measurement rules are applied, with historical loss information produced.

Simplified ECL valuation model for trade receivables, contract assets and lease receivables on operating leases

Lifetime expected credit losses are measured for all trade receivables, contract assets and operating lease receivables (which are assigned to Stage 2 or Stage 3) (see section 2.1.3.1.4.2).

Assets are assigned to Stage 3 when they are impaired due to the existence of a known credit risk (financial assets in default). In such cases, impairment for credit risk corresponds to the difference between all the cash flows that are due to an entity in accordance with the contractual provisions and all the cash flows that the entity expects to receive, discounted at the original effective interest rate, if applicable.

All other assets are assigned to Stage 2. Impairment for credit risk is subsequently measured at an amount equal to lifetime expected credit losses, based on available information. Entities may, in particular, use impairment calculation matrices based on how long past due the payment is.

2.1.3.1.4.5 Restructuring operations

Restructured loans are loans for which the entity has changed the original financial conditions due to the borrower's financial difficulties.

Restructuring processes are defined using two main criteria:

- concessions granted by the entity;
- the borrower's financial difficulties.

It is therefore necessary to analyse whether or not the contractual amendments to the loan relating to the borrower's financial difficulties will lead to derecognition of the loan.

Where the restructuring changes the contractual cash flows of the initial loan in a non-substantial manner, the initial loan is not derecognised. It is subject to a value adjustment (discount) made to reduce its carrying amount to the discounted amount, at the original effective interest rate of the loan, of the new expected future cash flows.

The interest rate discount recorded at the time of the loan restructuring is recorded in the income statement under "Cost of credit risk" and on the statement of financial position less the corresponding outstanding amount. The discount is then reclassified to the income statement in the interest margin in an actuarial manner over the term of the loan.

Any write-offs are recorded directly in profit or loss under "Cost of credit risk".

The restructured loan, which has not been derecognised, continues to be subject to the same assessments aimed at determining whether or not it has undergone a significant increase in credit risk since its initial recognition. To determine its allocation to the risk class and the amount of impairment for credit risk, a comparison is made between:

- the risk of default at the reporting date (based on the contractual conditions modified due to the restructuring); and
- the risk of default at the initial recognition date (according to the original, unmodified contractual conditions).

However, if the restructuring substantially modifies the contractual cash flows of the initial loan, the initial loan is derecognised and the new financial asset provided in exchange is recognised at its fair value at the date of the exchange. The difference in value recorded during this exchange is recognised in the income statement under "Cost of credit risk".

The restructuring date is therefore the initial recognition date for applying the provisions relating to the initial recognition of the new post-restructuring financial asset (see section 2.1.3.1.2.3) and the credit risk impairment rules (see section 2.1.3.1.4).

Given the various cases in which restructuring may lead to derecognition, a case-by-case analysis is conducted in order to decide on the allocation of the new post-restructuring financial asset to the risk class.

2.1.3.1.4.6 Uncollectibility of financial assets

When a financial asset is deemed non-collectable, i.e., there is no hope of full or partial recovery (including through the enforcement of any collateral), it should be derecognised from the statement of financial position and the amount deemed non-recoverable should be written off.

The timing of the write-off is determined by expert opinion. Each entity must therefore establish this timing based on its knowledge of its business.

Before any write-off, the financial asset should be transferred to Stage 3 and a lifetime expected credit loss should be recognised (with the exception of financial assets recognised at fair value through profit or loss).

For financial assets recognised at amortised cost or at fair value through other comprehensive income to be reclassified to profit or loss, the amount written off is recognised in the income statement under "Cost of credit risk".

2.1.3.1.5 Derivative financial instruments

A derivative is a financial instrument with the following three characteristics:

- its value fluctuates according to an interest rate, the price of a financial instrument, the price of commodities, a foreign exchange rate, a price or share price index, a credit rating or a credit index, or another variable called the underlying;
- it requires a low or zero net initial investment or lower than a non-derivative financial instrument to have the same sensitivity to changes in the underlying;
- it is settled at a future date.

Derivative instruments are financial assets and liabilities initially recognised in the statement of financial position at the transaction price. They are subsequently measured at fair value, regardless of whether they are held for trading or as part of a hedging relationship.

2.1.3.1.5.1 Derivative instruments held for trading

Derivatives are considered financial instruments held for trading, with the exception of derivatives that are part of a hedging relationship.

Derivative instruments held for trading are recognised in the statement of financial position under "Financial assets/liabilities at fair value through profit or loss". They are recognised as assets when their market value is positive and as liabilities when it is negative. Realised and unrealised gains and losses are recognised in the income statement under "Net gains and losses on financial instruments at fair value through profit or loss".

2.1.3.1.5.2 Derivative instruments and hedge accounting

The hedge accounting provisions of IFRS 9 will not be effective until the macro-hedge project has been finalised. They are therefore independent of the provisions of IFRS 9 on the classification, measurement and impairment of financial instruments.

The Caisse des Dépôts Group decided to apply the provisions of IFRS 9 for hedge accounting as from 1 January 2018 (excluding macro-hedging transactions, which are subject to a draft separate standard currently under review by the IASB and for which the provisions of IAS 39 adopted by the European Union continue to apply).

IFRS 9 includes some significant advances relative to IAS 39, among which:

- a better translation of entities' risk management policy in the financial statements, resulting in both an expansion of the scope of transactions eligible for hedge accounting and a better reflection of hedging transactions in profit or loss; and
- an easing of effectiveness testing, with the elimination of the retrospective effectiveness test and of the 80%-125% range.

Hedge accounting can be applied to a hedging relationship only if all of the following conditions have been met:

- eligibility of hedging instruments;
- eligibility of hedged items;
- existence of documentation from inception;
- compliance with the effectiveness criteria;
- eligibility of the types of hedging relationships.

Eligibility of hedging instruments

IFRS 9 does not change the conditions under which a derivative instrument may qualify as a hedging instrument.

Thus, a derivative may be designated in its entirety as a hedging instrument, with some exceptions, such as the possibility of using only a portion of the notional amount of a derivative (and not a portion of its term).

Eligibility of hedged items

IFRS 9 expands the scope of hedged items that may be eligible for hedge accounting relative to IAS 39. As a result:

- financial assets qualified as debt instruments and recognised at amortised cost can now be hedged against interest rate risk even if the management's intention is to hold them to maturity;
- financial assets qualified as equity instruments (shares) and recognised at fair value through other comprehensive income not to be reclassified to profit or loss under the option provided for may be hedged at fair value even though the changes in fair value never affect profit or loss.

Existence of documentation from inception

To best ensure that accounting hedges align with risk management, all hedging relationships must fall within a framework defined by:

- a risk management strategy that defines the general framework by identifying the risks to which the entity is exposed and describing how these risks are managed overall (risk management policy); and
- certain management objectives that represent the implementation of the overall strategy at the individual hedging transaction level.

The documentation required from the inception of the hedging relationship should therefore identify the hedging instrument, the hedged item and the nature of the risk being hedged and describe how the entity will assess whether the hedging relationship meets the hedge effectiveness requirements (including its analysis of the sources of hedge ineffectiveness and an explanation of how it determines the hedge ratio, where applicable).

Compliance with the effectiveness criteria

The effectiveness criteria which must be satisfied in order to apply hedge accounting under IFRS 9 have been changed relative to IAS 39 and are based on a less rigid approach which relies more on the use of judgement.

The criteria, which relate to expectations about hedge effectiveness, should be assessed on a prospective basis. There are three criteria, that:

- there is an economic relationship between the hedged item and the hedging instrument (inverse correlation);
- changes in the value of the hedging instrument or the hedged item are not linked primarily to a change in the counterparty's credit risk;
- in the case of hedging with a derivative that approximates the risk being hedged, the hedge ratio (i.e., quantity of the hedged item/quantity of the hedging instrument) used for accounting purposes must correspond to the ratio used by the entity for risk management purposes. There must be no obvious imbalance.

Prospective effectiveness tests must be conducted at the inception of the hedging relationship and, at a minimum, on each reporting date.

Eligibility of the types of hedging relationships

Like IAS 39, IFRS 9 recognises three types of hedging relationships.

Hedging derivatives meeting the criteria required by IFRS 9 (and IAS 39 adopted by the European Union for macro-hedging transactions) are recognised in the statement of financial position under "Hedging instruments". By default, other derivative instruments are recognised in the balance sheet under "Financial assets/liabilities at fair value through profit or loss", even if economically they have been subscribed to with a view to hedging one or more transactions.

Fair value hedges

A fair value hedge is a hedge of the exposure to changes in fair value of a recognised asset or liability or an unrecognised firm commitment.

In a fair value hedging relationship, the hedging instruments are measured at fair value in the statement of financial position (under "Hedging instruments"), with an offsetting entry in:

- the income statement, together with the gains and losses that arise on the hedged item (general case) (under "Net gains and losses on financial instruments at fair value through profit or loss" in the income statement);
- other comprehensive income not to be reclassified to profit or loss, together with the gains and losses that arise on the hedged equity instruments when the latter are recognised at fair value through other comprehensive income not to be reclassified to profit or loss under the option provided for (under "Other comprehensive income" in the statement of financial position).

In the statement of financial position, the gain or loss from remeasuring the hedged item is recognised based on the classification of the hedged item in a relationship hedging identifiable assets or liabilities.

An entity should discontinue fair value hedge accounting prospectively only when the hedging relationship no longer meets the eligibility conditions. In this situation:

- the hedging instrument continues to be recognised in the statement of financial position at fair value through profit or loss but is reclassified to "Financial assets/liabilities at fair value through profit or loss". If it no longer exists, the hedging instrument is derecognised;

- the hedged item continues to be recognised in the statement of financial position in the manner in which it had been recognised before the hedging transaction, unless it no longer exists, in which case it is derecognised. The hedged item is no longer adjusted for any changes in fair value related to the risk being hedged. The gains or losses recognised in the statement of financial position for the previously-hedged risk are amortised over the remaining life of the hedged item.

Macro-hedging

The Caisse des Dépôts Group applies the provisions of IAS 39 adopted by the European Union to macro-hedging transactions carried out as part of the asset/liability management of fixed-rate positions.

Some Group entities conduct an overall analysis of their interest rate risk. This analysis consists in assessing interest rate risk on all fixed rate elements recognised on the statement of financial position that generate such risk. These entities select the financial assets and liabilities that must be included in the interest rate risk hedging of the macro-hedging portfolio. These financial assets and liabilities are classified by portfolio maturity time intervals. Therefore, when these items are removed from the portfolio, they must be removed from all the time buckets to which they were allocated.

The entities constitute homogeneous portfolios, mainly loans and bond issues. Based on this differential analysis, performed on a net basis, they define the risk exposure to be covered, the length of time intervals, the test method and the frequency at which the tests are performed.

The macro-hedging instruments used by these entities are essentially simple interest rate swaps designated upon their establishment as fair value hedges of fixed-rate sources or uses. The effectiveness of these hedging relationships is evidenced through target schedules. The purpose of forward-looking effectiveness testing (carried out on the hedge designation date) and retrospective effectiveness testing (performed on each half-year and annual reporting date) is to ensure that there is no over-hedging. They are verified if, for each maturity band of the target schedule, the nominal amount of the hedged items is greater than the notional amount of hedging derivatives.

Macro-hedging instruments are derivatives whose accounting treatment is identical to that described for fair value hedges. In particular, they are recognised at fair value.

Revaluations relating to the hedged risk are recognised on the statement of financial position (either as assets or liabilities depending on whether the hedged-item groups are assets or liabilities) under "Cumulative fair value adjustments to portfolios hedged against interest rate risk".

Cash flow hedges

A cash flow hedge is a hedge of the exposure to variability in cash flows from financial instruments or a highly probable forecast transaction.

In a cash flow hedging relationship, hedging instruments are measured at fair value in the statement of financial position (under "Hedging instruments"), with an offsetting entry to "Other comprehensive income" for the effective portion (equity) and to "Net gains and losses on financial instruments at fair value through profit or loss" for the ineffective portion (income statement).

The amounts accumulated in equity over the life of the hedge are taken to profit or loss under “Interest income” or “Interest expense” as and when the hedged item itself affects profit or loss.

Hedged items continue to be accounted for under the rules applicable to their category.

An entity should discontinue cash flow hedge accounting prospectively only when the hedging relationship no longer meets the eligibility conditions. In this situation:

- the hedging instrument continues to be recognised in the statement of financial position at fair value through profit or loss but is reclassified to “Financial assets/liabilities at fair value through profit or loss”. If it no longer exists, the hedging instrument is derecognised;
- the cumulative gain or loss on the hedging instruments that has been recognised in equity will remain in equity until the forecast transaction affects profit or loss or until the transaction is no longer expected to occur, in which case it is reclassified to profit or loss;
- if the hedged item no longer exists, the amounts accumulated in equity are recognised immediately in profit or loss.

Net investment hedges

A net investment hedge is a hedge of the exposure to unfavourable changes in fair value attributable to the currency risk on an investment other than in euros. The recognition principles applicable to net investment hedges are identical to those for cash flow hedges.

Irrespective of the hedging strategy, hedge ineffectiveness is recognised in profit or loss under “Net gains and losses on financial instruments at fair value through profit or loss” in the income statement (with the exception of fair value hedges of equity instruments recognised at fair value through other comprehensive income not to be reclassified to profit or loss under the option provided for, for which hedge ineffectiveness is recognised in the statement of financial position under “Other comprehensive income”).

The Caisse des Dépôts Group has also chosen to recognise certain hedged items and the related hedging instruments under “Financial assets/liabilities at fair value through profit or loss” as allowed under IFRS 9. This treatment has been applied primarily to government bonds and negotiable debt securities hedged by swaps under asset swap agreements.

2.1.3.1.6 Embedded derivatives

An embedded derivative is a component of a hybrid (combined) instrument that meets the definition of a derivative instrument. This designation applies only to financial liabilities and not to financial assets, for which the financial asset as a whole must be recognised in accordance with the provisions of IFRS 9 as described in section 2.1.3.1.2.3 (i.e., a derivative embedded in a financial asset cannot be separated).

Derivatives embedded in a financial liability must be separated from the host contract and recognised as derivatives if the following three conditions are met:

- the hybrid contract is not measured at fair value through profit or loss;
- separated from the host contract, the embedded component has the characteristics of a derivative;
- the economic characteristics and risks of the embedded derivative are not closely related to those of the host contract.

An embedded derivative that is accordingly separated from the financial liability is recognised at fair value under “Financial liabilities at fair value through profit or loss”.

2.1.3.1.7 Fair value of financial instruments

Financial assets and liabilities at fair value through profit or loss, hedging instruments and financial assets at fair value through other comprehensive income (to be and not to be reclassified to profit or loss) are measured and recognised at fair value on initial recognition and at subsequent reporting dates.

Fair value as defined by IFRS 13 is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The Caisse des Dépôts Group determines the fair value of financial instruments based on either prices obtained directly from external inputs or from valuation techniques. The valuation techniques applied are primarily the market approach and the income approach, which draw on several widely used techniques such as discounted cash flow and adjusted net asset value models. These approaches maximise the use of observable inputs and minimise the use of unobservable inputs. Valuation techniques are calibrated to reflect current market conditions.

Assets and liabilities recognised or shown at fair value correspond to the following levels in the fair value hierarchy:

- level 1: fair value is determined using prices quoted in active markets (unadjusted) for identical assets or liabilities. An active market is a market in which transactions in the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis;
- level 2: fair value is determined using valuation techniques that chiefly rely on directly or indirectly observable market inputs. These techniques are regularly calibrated and the inputs corroborated by data from active markets (“market-corroborated data”);
- level 3: fair value is determined using valuation techniques that chiefly rely on unobservable inputs or on inputs that cannot be corroborated by market data, for example due to a lack of liquidity for the instrument or to a significant model risk. Unobservable inputs are inputs for which no market data is available, and which therefore result from internal assumptions based on data that would be used by other market participants. Judgement is involved in determining when there is a lack of liquidity or a risk relating to the use of a model.

When several inputs are used to calculate the fair value of a financial asset or liability, the fair value obtained is categorised in its entirety in the same level of the fair value hierarchy as the lowest level input that is significant to the entire fair value measurement.

Unlisted equity instruments

The fair value of unlisted equity instruments is generally computed using a number of different techniques (discounted cash flows, adjusted net asset value or multiples for comparable companies):

- if fair value is based on data relating to comparable listed companies or, for property investments, on a revaluation of property using observable market inputs, equity instruments are classified in level 2 of the fair value hierarchy;
- however, if fair value is based on discounted cash flows or adjusted net asset value using internal company data, the equity instruments are classified in level 3 of the fair value hierarchy. This also applies to instruments measured using the multiples approach when the inputs require significant adjustments based on unobservable inputs to reflect factors specific to the entity concerned.

2.1.3.1.8 Offsetting of financial assets and liabilities

In accordance with IAS 32 “Financial Instruments: Presentation”, the Caisse des Dépôts Group offsets a financial asset and a financial liability and presents a net amount when, and only when:

- it has a legally enforceable right to set off the recognised amounts; and
- it intends to settle on a net basis or to realise the asset and settle the liability simultaneously.

The legally enforceable right must be irrevocable and must be able to be exercised in all circumstances.

This right applies to all transactions by the clearing house and applies to nominal cash amounts and interest incorporated into the repayment flow.

Repurchase agreements whose operating principles meet the two criteria required by the standard are offset on the statement of financial position where:

- they have the same maturity dates;
- they are carried out in the same currency;
- they are settled through a settlement-delivery system guaranteeing the delivery of securities against the receipt of corresponding cash;
- the securities are deposited with the same custodian.

Offsetting primarily concerns repo transactions carried out with the LCH Clearnet and Eurex clearing houses.

2.1.3.1.9 Financial guarantees given

A financial guarantee contract is a contract that requires the issuer to make specified payments to reimburse the holder for a loss that the holder suffers because a specified debtor fails to make a payment when due in accordance with the original or modified terms of a debt instrument.

2.1.3.2 Insurance activities

2.1.3.2.1 Overview

IFRS 17 establishes the principles for the recognition, measurement, presentation and disclosure of insurance contracts within the scope of the standard.

IFRS 17 applies to:

- insurance and reinsurance contracts issued;
- reinsurance contracts held;
- investment contracts with a discretionary participation feature.

Contracts that do not fulfil the criteria for classification as either insurance contracts or financial instruments without discretionary participation features fall within the scope of:

- IFRS 15, when they correspond to the provision of services;
- IAS 19, for contracts held in connection with benefit plans in favour of Group employees;
- IFRS 9, for investment contracts without discretionary participation features.

Financial guarantee contracts are initially measured at fair value and subsequently at the higher of:

- the amount of impairment determined using the ECL method as described in “Impairment for credit risk” (see section 2.1.3.1.4); or
- the amount initially recognised less, where applicable, the total income recognised in accordance with the principles of IFRS 15.

They are reported in liabilities, under “Provisions”.

2.1.3.1.10 Financing commitments

Financing commitments that are not considered derivatives within the meaning of IFRS 9 or that are not designated as financial liabilities measured at fair value through profit or loss under the fair value option are not recognised in the statement of financial position.

However, they are covered by provisions determined using the ECL method under IFRS 9 as described in “Impairment for credit risk” (see section 2.1.3.1.4).

They are reported in liabilities, under “Provisions”.

Financing commitments whose conditions are below market conditions must also be recognised initially at fair value. This fair value gives rise to the recognition of a discount in profit or loss as soon as the lending commitment is made (the discount represents the difference between the rate granted and the market rate on an actuarial basis), with an offsetting entry to a provision account in liabilities.

Financing commitments that have been entered into at a below-market interest rate are subsequently measured at the higher of:

- the amount of impairment determined using the ECL method as described in “Impairment for credit risk” (see section 2.1.3.1.4); or
- the amount initially recognised less, where applicable, the total income recognised in accordance with the principles of IFRS 15.

Insurance contracts written by the Caisse des Dépôts Group that are recognised and measured in accordance with IFRS 17 include:

- insurance contracts that transfer a significant risk to the insurer. This category covers death and disability, pension, property and casualty contracts and unit-linked savings contracts with a capital guarantee;
- financial instruments with discretionary participation features (DPF), comprising both traditional savings contracts with DPF and unit-linked contracts including a traditional savings component with DPF.

Note: references below to insurance contracts include investment contracts with discretionary participation features and reinsurance contracts held, except where these are explicitly mentioned.

2.1.3.2.1.1 Insurance contracts

An insurance contract is a contract under which one party (the issuer) accepts significant insurance risk from another party (the policyholder/the insured) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder.

An insurance contract issued by one entity (the reinsurer) to compensate another entity for claims arising from one or more insurance contracts issued by that other entity (underlying contracts).

Insurance contracts include contracts with direct participation features and contracts without direct participation features.

In substance, insurance contracts with direct participation features are contracts for investment-related services, in which the entity promises a return on the underlying assets. They are defined as insurance contracts for which, at inception:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;
- the entity expects to pay to the policyholder an amount equal to a substantial share of the fair value returns on the underlying items;
- the entity expects any change in the amounts payable to the policyholder to be attributable, in a material proportion, to the change in the fair value of the underlying items.

Compliance with these three conditions is assessed at inception of the contract and is not reassessed at a later date, unless the contract is substantially modified.

All other insurance contracts and all reinsurance contracts (both issued and held) are insurance contracts without direct participation features. They include:

- insurance contracts with indirect participation features (indirect participating contracts), for which the amounts payable to the policyholder depend on the fair value returns on the underlying items, without however meeting the criteria for classification as insurance contracts with direct participation features;
- insurance contracts without any participation features (non-participating contracts), for which the amounts payable to the policyholder do not depend on the fair value returns on the underlying items.

2.1.3.2.1.2 Investment contracts with discretionary participation features

An investment contract is a contract that does not expose the insurer to a significant insurance risk.

An investment contract with discretionary participation features is defined as a financial instrument that provides a particular investor with the contractual right to receive, as a supplement to an amount not subject to the discretion of the issuer, additional amounts:

- that are expected to be a significant portion of the total contractual benefits;
- the timing or amount of which is contractually at the discretion of the issuer; and
- that are contractually based on:
 - the return on a specified pool of contracts or a specified type of contract,
 - realised and/or unrealised investment returns on a specified pool of assets held by the issuer, or
 - the profit or loss of the entity or fund that issues the contract.

2.1.3.2.2 Separating the components of an insurance contract

The following components are separated from insurance contracts and accounted for in accordance with the IFRSs applicable to them. These include certain embedded derivatives, separate investment components and certain performance obligations, such as the obligation to provide a non-insurance service or product.

The other remaining components of the host contract fall within the scope of IFRS 17, including embedded derivatives or investment components that have not been separated.

2.1.3.2.3 Level of aggregation of insurance contracts

Contracts are allocated to a group of contracts on initial recognition, for the purposes of their recognition, measurement, presentation and disclosure in the notes to the financial statements.

Groups of contracts are determined in a three-step process:

- the first step consists of allocating the contracts to portfolios. A portfolio comprises contracts that are subject to similar risks and managed together;
- the second step involves allocating each contract in the portfolio to one of the following three groups depending on the contract's expected profitability at initial recognition:
 - a group of contracts that are onerous (loss-making) at initial recognition,
 - a group of contracts that at initial recognition have no significant possibility of becoming onerous subsequently,
 - a group of the remaining contracts in the portfolio.

No group should include contracts issued more than one year apart (annual cohorts requirement).

To avoid the economic reality of insurance contracts involving intergenerational pooling of risks not being properly reflected in the financial statements, the European Union has introduced an optional exemption from the application of this annual cohort requirement (article 2 of Regulation EU No. 2021/2036 of 19 November 2021). The Group has chosen to apply this exemption.

Contracts are assigned to a group and accounting model upon initial recognition. A group of contracts or the accounting model cannot be changed, except in the case of a contract modification within the meaning of IFRS 17.72, i.e., when the terms of an insurance contract are modified, for example by agreement between the parties to the contract or by a change in regulations.

2.1.3.2.4 Date of initial recognition

A group of insurance contracts is recognised from the earliest of the following dates:

- the start of the coverage period of the group of contracts;
- the date on which a policyholder's first payment becomes due or, if there is no due date, the date on which the first payment is received;
- in the case of a group of onerous contracts, the date on which the group becomes loss-making.

2.1.3.2.5 Insurance acquisition cash flows

Insurance acquisition cash flows are cash flows generated by the costs of selling, underwriting and creating a group of insurance contracts.

Insurance acquisition cash flows recognised in the reporting period are calculated using metrics that are representative of the services rendered during the period (premiums, mathematical provisions, etc.).

They are allocated to groups of insurance contracts using a systematic and rational method.

When the cash outflow occurs before initial recognition of the group of contracts, it is recognised in assets as a deduction from the carrying amount of the insurance contracts.

If an impairment loss is identified, the carrying amount of the asset recognised for insurance acquisition cash flows is adjusted and the impairment loss is recognised in profit or loss.

The asset is derecognised, in whole or in part, when the insurance acquisition cash flows are included in the value of the corresponding group of insurance contracts.

The recoverability of these assets is reviewed at each reporting date if facts and circumstances indicate that they may be impaired.

The assets are amortised separately for each group of contracts.

2.1.3.2.6 Measurement of insurance contracts

IFRS 17 proposes three accounting models with different methods of application, both for the measurement of obligations and their recognition in the statement of financial position and the income statement. Each type of insurance contract has its own accounting model:

- the general Building Block Approach (BBA), which is the default model;
- the Variable Fee Approach (VFA), an alternative to the general model that takes account of the specific features of insurance contracts with direct participation features (e.g., segregated funds and variable capital contracts);
- the Premium Allocation Approach (PAA), a simplified version of the general model. Application of this model is optional when certain criteria are met.

Application of the VFA model is compulsory for all direct participating contracts, such as contracts with segregated funds and variable capital contracts. The Group also uses this approach for insurance contracts with investment components.

The Group makes limited use of the PAA model. It is used for Brazilian contracts and contracts from CNP Assurances IARD and CNP Santander that fulfil the related criteria.

2.1.3.2.6.1 General BBA model and VFA model

Initial recognition

On initial recognition, there is no difference between the BBA and VFA models (except for groups of insurance contracts qualifying for the European carve-out on annual cohorts). In both cases, the liability is measured based on three building blocks:

- fulfilment cash flows, comprising two blocks:
 - Best Estimate (BE) of future cash flows,
 - a non-financial risk adjustment (RA);
- a contractual service margin (CSM).

Best Estimates of future cash flows

The measurement of a group of insurance contracts includes all future cash flows within the scope (boundary) of each contract in the group. Future cash flows may be estimated at a higher level of aggregation and then allocated to groups of individual contracts.

Cash flows included in the boundary

The contract boundary determines all cash flows directly linked to the fulfilment of the insurance contract and service. These include premiums paid by the policyholder, payments to the policyholder, insurance acquisition cash flows allocated to the portfolio to which the contract belongs, claims handling expenses, and an allocation of fixed and variable overheads that are directly attributable to the fulfilment of the insurance contract.

Costs that are not directly attributable to insurance contracts are recognised directly in the income statement when incurred.

Estimated future cash flows

The purpose of estimating future cash flows is to determine the expected value of a set of scenarios that reflects the full range of possible outcomes.

Estimates of future cash flows must:

- incorporate, in an unbiased way, all reasonable and supportable information available without undue cost or effort about the amount, timing and certainty of future cash flows at the reporting date, including estimated mathematical expectations (i.e., the probability-weighted average) of the full range of possible outcomes;
- reflect the Group's views, provided that estimates of the relevant market variables are consistent with observable market prices for those variables;
- be up to date – estimates should reflect the conditions existing at the measurement date, including assumptions about the future at that date;
- be explicit.

The economic assessment should be based on the average of numerous economic trajectories. To ensure that the estimates are relevant, account is taken of management action and action by the Group's partners in market conditions far removed from the current situation.

Discount rate

IFRS 17 requires the time value of money and the financial risks associated with future cash flows to be taken into account when estimating future cash flows, to the extent that the financial risks have not been included in the estimates of these flows. The discount rates applied to estimates of future cash flows are determined in accordance with the guidelines in the standard.

Under IFRS 17, the yield curve may be constructed using either a bottom-up approach or a top-down approach.

The Group has opted to use the bottom-up approach whereby the yield curve is determined as the sum of two components: a market risk-free rate and a liquidity premium reflecting the insurance contracts' cash flow and liquidity characteristics.

The discount curves used by the Group may vary depending on the market. They are generally based on observed market rates using the risk-free yield curve.

The discount curves may differ from those used for other actuarial modelling purposes, such as insurance contract pricing or risk management.

Two types of discount curve are used depending on the nature of the cash flows to be discounted and the accounting method and the accounting aggregates to be impacted:

- the current discount curve: determined using market information at the measurement date (market-consistent); or
- the discount curves at inception: determined on the basis of historical data to obtain a measurement of liabilities at the date of initial recognition of the group of insurance contracts.

This section covers all the currencies to which the insurance subsidiaries are exposed but focuses mainly on yield curve assumptions for the euro, which is the functional currency of the majority of Group entities and the Group's presentation currency.

An adjustment or liquidity premium is then applied to take account of differences between the liquidity characteristics of the group of insurance contracts and those of the underlying assets used to select a yield curve.

The Caisse des Dépôts Group has established portfolios of financial instruments that serve as a benchmark for estimating the liquidity premium on insurance liabilities in line with the approach recommended by other regulators for estimating the Volatility Adjustment. The portfolios concerned correspond to the financial assets held by the insurance subsidiaries, comprising both bonds and diversified assets. The liquidity premium for these portfolios is adjusted by applying ratios to take account of the contracts' characteristics and the matching of assets and liabilities.

The approach used to determine a liquidity premium for a bond portfolio is comparable to the method suggested by EIOPA as part of its review of Solvency II, in terms of both calibration (macroeconomic nature of the default probabilities underlying the credit spreads) and portfolio comparisons. The liquidity premium on a bond portfolio is estimated using a model commonly used to determine the Volatility Adjustment.

The Group has chosen to include the following asset classes in its diversified portfolio:

- Real Estate and Infrastructure: these two asset classes are generally held as long-term investments, which explains their relatively high liquidity premium compared to other diversified asset classes;
- Equities: this class has been chosen, *inter alia*, because of the significant difference in volatility between the portfolio and the market. Market volatility is not expected to have a material impact on the Equities portfolio, because on average the portfolio's volatility is lower and more stable than that of the market, largely due to the insurance subsidiaries' asset management policies.

Risk adjustment for non-financial risks (RA)

A risk adjustment for non-financial risks is applied to the estimated present value of future cash flows (contracts exposed to an insurance risk only), to reflect the compensation that the Group requires for bearing the uncertainty about the amount and timing of the cash flows (premiums, claims, benefits, expenses, etc.) that arises from non-financial risk.

The RA for non-financial risks is determined using a fixed percentile common to all subsidiaries and identified risks.

It is based on an ultimate confidence level of 80%. This level corresponds to the Group's best estimate of its exposure to non-financial risk in an accounting environment. It is also in line with the five-year projection period used for the business plan, corresponding to the implementation period of a strategy to limit the risk of its objectives not being achieved over the period, in other words using appropriate metrics to minimise business plan uncertainty.

The quantile is estimated using the Value at Risk (VaR) method, which consists of determining, for a given percentile, the expected loss on the insurer's commitments, assuming a known statistical distribution of risk factors.

This adjustment is released to net banking income on the line "Insurance service expenses".

Contractual service margin (CSM)

The CSM of a group of contracts represents the unearned profit that the Group will recognise in the income statement as it provides insurance contract services in the future.

It is determined as the difference between premiums received, as adjusted for acquisition costs already paid, and contract fulfilment cash flows (BE and RA).

No income or expense is recognised in the income statement on initial recognition, except in the case of onerous contracts where the expected loss (negative CSM) is recognised immediately in the income statement. The loss component is monitored until the contract is derecognised or becomes profitable.

Subsequent measurement

At each reporting date, the carrying amount of a group of insurance contracts is re-estimated at an amount equal to the sum of:

- the liability for remaining coverage (LRC), comprising the fulfilment cash flows related to future services allocated to the group at that date and the contractual service margin of the group at that date;
- the liability for incurred claims (LIC), comprising the fulfilment cash flows related to past service, i.e., incurred claims and related expenses that have not yet been paid, including claims incurred but not yet reported.

Changes in fulfilment cash flows are recognised as follows:

- changes in fulfilment cash flows related to future service are recognised by adjusting the CSM (or recognised in the insurance service result in the case of a group of onerous contracts);
- changes in fulfilment cash flows related to current or past service are recognised in the insurance service result;
- the effect of the time value of money, financial risk and related changes on future cash flows is recognised in finance income or finance expense from insurance contracts.

The CSM is recognised in profit or loss for the period based on the number of coverage units in the group, corresponding to the quantity of insurance contract services provided by the contracts in the group and the expected coverage period.

Coverage units are determined prospectively at the end of each reporting period, taking into account:

- the quantity of services provided under the group of contracts;
- the expected coverage period of the group of contracts; and
- the probability of insured events occurring, only to the extent that they affect the expected coverage period of the group of contracts.

Coverage units are used to allocate income and expenses to each reporting period. Revenues are recognised in each period as the covered insurance services are provided, while expenses are recognised on the basis of the expected costs associated with the cover.

By way of example, the following coverage units are used for the main types of contract:

- savings and pensions: mathematical provisions;
- term creditor insurance: outstanding principal, principal at risk;
- individual death/disability insurance:
 - funeral insurance: insured amount, principal at risk,
 - long-term care insurance: insured amount for home improvements, number of contracts,
 - term life insurance: premiums;
- Group death/disability insurance: these are annual contracts and the total CSM is therefore recognised in profit in the reporting year.

The CSM for each group of contracts is calculated at each reporting date as follows, depending on whether the contracts are without direct participation features (BBA model) or with direct participation features (VFA model):

Measurement using the BBA model

At each reporting date, the carrying amount of the CSM is adjusted to take into account, for all contracts:

- the effect of new contracts added to the group;
- interest accreted on the carrying amount of the CSM during the reporting period, measured at the discount rate used to determine the CSM's value at inception of the group of contracts;
- changes in fulfilment cash flows (estimates of the present value of future cash inflows and outflows related to insurance services provided over the remaining coverage period, excluding estimates of amounts to be paid in respect of incurred claims, which are measured separately);
- the amount recognised in insurance revenue in respect of insurance services provided during the period under the insurance contracts (CSM released to profit or loss).

If an insurance contract becomes onerous after the CSM has been released to profit or loss, the loss on the contract is recognised in the reporting period. If an onerous contract becomes profitable as a result of favourable changes in assumptions, the loss component is set off against the profit and the balance, if any, is allocated to the CSM.

Measurement using the VFA model

The variable fee approach (VFA model) is mandatory for direct participation contracts and is the accounting method most commonly used by the Group.

In accounting terms, this approach reflects the specific nature of the services provided by insurance contracts with direct participation features, i.e., contracts under which the insurer is required to pay part of its financial income to the policyholder.

The VFA model is applicable to insurance contracts with participation features that contain the following three conditions:

- the contractual terms specify that the policyholder participates in a share of a clearly identified pool of underlying items;

- the entity expects to pay the policyholder an amount equal to a substantial share of the fair value of returns from the underlying items;
- a substantial proportion of the cash flows the entity expects to pay to the policyholder are expected to vary in line with changes in the fair value of the underlying items.

For savings and pensions contracts measured using the VFA model, in order to ensure that coverage units are correctly allocated to each financial year, the CSM released to profit in each period is adjusted based on actual results for the period. The main purpose of this adjustment is to provide a better understanding of the economic effects not considered in the initial CSM measurement by including all the services rendered (asset management and performance). It is made for each savings/pensions portfolio measured according to the VFA model that is profitable at the balance sheet date, using a long-term approach that takes into account a risk premium and the cost of options and guarantees.

The standard permits the use of financial instruments at fair value through profit or loss (notably derivatives) or reinsurance contracts held to mitigate the effect of the time value of money and financial risk on contracts with direct participation features. Risk mitigation measures are mainly applied to reinsurance contracts held.

Where the conditions are met, the Group has chosen not to recognise the following items within CSM, as would have been the case under the VFA model, but to recognise them in profit or loss, in order to offset them against changes in the fair value of the hedging instruments used. This option concerns:

- the amount corresponding to the Group's share of the fair value of the underlying items;
- changes in the effect of the time value of money and financial risks that do not result from the underlying items.

These provisions are applied by adjusting the CSM on direct insurance contracts for the difference between the CSM adjustment on reinsurance contracts held, as calculated using the VFA model and the BBA model. The amount of finance expense corresponding to the risk mitigation effect is recognised in full in profit or loss as the OCI option is not applied to reinsurance contracts held by head office entities.

This application of IFRS 17 fulfils the objective of eliminating differences resulting from the use of different measurement models for reinsurance contracts held and underlying items, primarily for reinsurance contracts measured using the VFA model. In addition, it highlights the risk mitigation effect.

2.1.3.2.6.2 PAA model

The premium allocation approach (PAA) is an optional measurement model that provides a simplified approach to measuring the liability for remaining coverage of a group of insurance contracts if one of the following two eligibility criteria is met at inception of the group:

- the entity reasonably expects that such simplification would produce a measurement of the liability for remaining coverage for the group that would not differ materially from the one that would be produced applying the general model. Paragraph 54 of IFRS 17 specifies the cases in which this condition cannot be verified; or
- the coverage period is one year or less.

In accordance with paragraph 69 of IFRS 17, this accounting model may also be applied to reinsurance treaties issued or held subject to compliance with the same criteria.

The general model's three building blocks for liabilities are replaced by a provision for unearned premiums (formation).

The carrying amount of the liability for remaining coverage on initial recognition is equal to the premiums received at initial recognition, minus any acquisition cash flows at that date, plus or minus any amount arising from the derecognition at that date of any asset for insurance acquisition cash flows.

The liability is then adjusted for:

- liabilities recorded in respect of incurred claims, in the same way as for the BBA or VFA models; and
- the outstanding cover.

2.1.3.2.7 Measurement of reinsurance contracts

This section describes the specific features of the measurement models applied by the Caisse des Dépôts Group to reinsurance contracts held and issued in accordance with IFRS 17.

2.1.3.2.7.1 Definition of inward reinsurance portfolios (reinsurance issued)

Inward reinsurance corresponds to the assumption by the Group of certain insurance risks underwritten by other companies, resulting in the recognition of groups of reinsurance contracts issued.

IFRS 17 does not include any specific guidance on the accounting treatment of groups of reinsurance contracts issued. Consequently, the provisions of IFRS 17 relating to the recognition and measurement of insurance contracts are applied.

The Group's position is to not create IFRS 17 portfolios specifically for inward reinsurance.

2.1.3.2.7.2 Definition of outward reinsurance portfolios (reinsurance held)

Outward reinsurance corresponds to the transfer of insurance risk and the corresponding premiums to other reinsurers that will share the risks.

The Group has chosen to align the definition of portfolios of reinsurance contracts held with the definition of direct insurance portfolios. This is because the contracts in question are quota-share treaties and the risks within a portfolio are automatically similar in terms of ceded commitments if they are deemed to be similar to direct insurance portfolios. Lastly, the grouping of several reinsurance contracts in the same portfolio enables the Group to consider that they are managed together in the sense that the common objective is to mitigate the risks on a portfolio of underlying contracts that in turn are managed together.

2.1.3.2.7.3 Contract boundaries

Cash flows within the contract boundary for reinsurance contracts held result from the Group's substantive rights or obligations as the ceding insurer.

In this regard, the reinsurer has a substantive obligation to provide insurance coverage or other services to the ceding insurer. The substantive obligation ends when:

- the reinsurer has the practical ability to reprice the risks transferred by the ceding insurer or change the level of cover so that the price fully reflects those risks;
- the reinsurer has the right to terminate the cover. The ceding insurer has a substantive obligation to pay the premiums due to the reinsurer.

The Caisse des Dépôts Group's BE, RA and CSM calculations take into account the effect of reinsurance on underlying contracts not yet recognised by the ceding insurer, including any contracts issued prior to the reinsurance contract covering them.

2.1.3.2.7.4 Measurement model

Reinsurance contracts held or issued are measured using the BBA and PAA models if the eligibility criteria are met.

The VFA model cannot be applied to these contracts because they do not include any direct participation features.

All reinsurance contracts related to the Group's activities in France are measured using the BBA general model.

Reinsurance contracts are designed to cover claims incurred under underlying contracts written during a specified period.

The measurement of reinsurance contracts held is based on the principle of mirroring the underlying insurance contracts:

- fulfilment cash flows are estimated using consistent assumptions to determine the present value of the future cash flows of the group of reinsurance contracts and the future cash flows of the underlying groups of insurance contracts;
- the non-financial risk adjustment represents the amount of risk transferred by the holder of the group of reinsurance contracts to the issuer of these contracts. As the risk of non-performance by the reinsurer is not a risk transferred to the reinsurer by the ceding company, it is only reflected in the present value of future cash flows of the reinsurance contract and not in the contract risk adjustment;
- the CSM on initial recognition of the group of reinsurance contracts represents a net cost (or net gain in some cases) on purchasing the reinsurance, as there is no unearned profit on a group of reinsurance contracts. The net reinsurance cost or gain is recognised in profit or loss over the coverage period of the reinsurance contracts.

The CSM is adjusted through profit or loss when a loss is recognised on the initial recognition of a group of onerous underlying insurance contracts or on the addition of onerous underlying insurance contracts to the group.

2.1.3.2.8 Derecognition and modification of contracts

The Caisse des Dépôts Group derecognises an insurance contract when:

- the contract is extinguished, i.e., when the insurer's obligation expires, is discharged or is cancelled; or
- changes to the contract result in its derecognition, i.e., when the terms of an insurance contract are modified and this change results in derecognition of the original contract and recognition of a new modified contract.

2.1.3.2.9 Risk mitigation measures

The standard permits the use of financial instruments at fair value through profit or loss (notably derivatives) or reinsurance contracts held to mitigate the effect of the time value of money and financial risk on contracts with direct participation features. Risk mitigation measures are mainly applied to reinsurance contracts held.

Where the conditions are met, the Group has chosen not to recognise the following items within CSM, as would have been the case under the VFA model, but to recognise them in profit or loss, in order to offset them against changes in the fair value of the hedging instruments used. This option concerns:

- the amount corresponding to the Group's share of the fair value of the underlying items;
- changes in the effect of the time value of money and financial risks that do not result from the underlying items.

These provisions are applied by adjusting the CSM on direct insurance contracts for the difference between the CSM adjustment on reinsurance contracts held, as calculated using the VFA model and the BBA model. The amount of finance expense corresponding to the risk mitigation effect is recognised in full in profit or loss as the OCI option is not applied to reinsurance contracts held by head office entities.

This application of IFRS 17 fulfils the objective of eliminating differences resulting from the use of different measurement models for reinsurance contracts held and underlying items, primarily for reinsurance contracts measured using the VFA model. In addition, it highlights the risk mitigation effect.

2.1.3.2.10 Intra-group margin

La Banque Postale group, controlled by the Caisse des Dépôts Group, distributes and manages insurance contracts on behalf of its subsidiaries. This activity generates distribution and management costs which are included in the Group's income statement.

For their part, the insurance subsidiaries pay insurance contract distribution and management fees to La Banque Postale. These fees include a mark-up charged by La Banque Postale to its subsidiaries.

Under IFRS 17, the Best Estimate includes all costs associated with insurance activities, including the cost of distributing and managing the insurance contracts. The insurance subsidiaries' Best Estimates include the insurance contract distribution and management fees, with the mark-up.

However, at Group level, the mark-up is not included in the Best Estimate, as it represents a profit and not a cost, and it is therefore included in the CSM.

As a result, the Group CSM is different from the sum of the insurance subsidiaries' CSMs. It includes a component representing the intra-group margin, which is determined by applying an estimated cost/income ratio to distribution and management fees. The cost/income ratio is calculated based on the bank's observed cost of insurance products. This margin is included in the CSM at La Banque Postale group level.

2.1.3.2.11 Presentation in the financial statements

2.1.3.2.11.1 Statement of financial position

The carrying amounts of the following portfolios are presented separately in the consolidated statement of financial position:

- insurance contract assets;
- insurance contract liabilities;
- reinsurance contract assets;
- reinsurance contract liabilities.

2.1.3.2.11.2 Income statement

Revenue from insurance contracts issued

Revenues from insurance contracts reflect the consideration to which the Group expects to be entitled in exchange for the services provided under the contracts. Revenues for the reporting period include the amount representing the premium received that covers insurance service expenses and the margin expected in respect of services provided during the period.

Insurance service expenses

Insurance service expenses arising from insurance contracts issued are generally recognised in profit or loss for the period in which they are incurred.

Expenses for the period include expenses for claims incurred in respect of services rendered during the period or in previous periods, and other amounts such as amortisation of insurance acquisition cash flows, losses on onerous contracts and reversals of such losses.

Payments relating to investment components are excluded from insurance service expenses.

Reinsurance income and expenses

Income and expenses on reinsurance held represent amounts recovered from reinsurers and the allocation of premiums paid in respect of this cover.

Finance income or expense from insurance contracts issued

Finance income or expense from insurance contracts issued consists of changes in the carrying amount of groups of insurance and reinsurance contracts resulting from the effects of the time value of money, financial risk and related changes.

IFRS 17 requires an accounting policy choice to be made as to whether to disaggregate insurance finance income or expense from insurance contracts between profit or loss and other comprehensive income (OCI).

This choice of accounting method applies at the level of each portfolio of contracts.

Under certain conditions, the OCI option allows changes in the value of insurance liabilities to be recognised directly in equity rather than through profit or loss. This option mainly concerns the effect of changes in the discount rate applied to insurance liabilities.

It is available for insurance contracts that meet certain conditions, in particular with regard to the way in which the assets are managed and the obligations are valued. Election to apply the OCI option must be made consistently for all contracts in the same IFRS 17 portfolio. For participating contracts, the option applies to contracts meeting certain conditions, in particular concerning the intended holding period of the underlying assets.

The Group applies this option by mirroring the recognition in other comprehensive income of gains and losses on the underlying assets representing insurance obligations.

Application of the OCI option reduces the volatility of investment income linked to fluctuations in the market value of assets. This is particularly useful for long-term insurance contracts that are exposed to market risks. In particular, the recognition in other comprehensive income of the effect of changes in interest rates on insurance liabilities reduces the sensitivity of the insurance service result to the volatility resulting from the measurement of liabilities at the current rate for each period.

2.1.3.3 Investments in equity-accounted companies

The Group's interests in associates and joint ventures are accounted for by the equity method.

Under this method, the investment in an associate or joint venture is initially recognised at cost and subsequently adjusted to reflect any changes in the Group's share in the investee's net assets after the acquisition date. Goodwill relating to interests in associates and joint ventures is included in the carrying amount of the investment.

The Group's share of the earnings of associates and joint ventures is reflected in the income statement under "Share of profit (loss) of equity-accounted companies".

After the equity method is applied, the Caisse des Dépôts Group's interest in an associate or joint venture is impaired and an impairment loss is recognised if there is objective evidence of impairment as a result of one or more events that occurred after the initial recognition of the interest (loss event) and if that loss event (or events) has an impact on the estimated future cash flows of the interest that can be reliably estimated. The losses expected as a result of future events are, however, not recognised.

If there is objective evidence of impairment, the full amount of the equity-accounted investment is tested for impairment in accordance with IAS 36 "Impairment of Assets". An impairment loss is recognised if the recoverable amount of the investment, reflecting the higher of its fair value less the costs of disposal and its value in use, is lower than its carrying amount.

When an impairment loss is recognised, it is charged against the value of the equity-accounted investment in the statement of financial position, and may subsequently be reversed if the value in use or fair value less the costs of disposal increases. The impairment loss is recognised in the income statement under "Share of profit (loss) of equity-accounted companies".

If the Group's share in the losses of an equity-accounted company equals or exceeds its interest in that equity-accounted company, the Caisse des Dépôts Group ceases to recognise its share of further losses. Its interest is then reduced to zero. Additional losses of the associate or joint venture are provided for only to the extent that the Group has incurred legal and constructive obligations or made payments on behalf of the associate or joint venture.

When an interest in a joint venture becomes an interest in an associate (and vice versa), any retained interest in the investment is not revalued. This also applies to partial acquisitions and sales that do not result in a change of control.

Any gains or losses resulting from sales of investments in associates and joint ventures are recognised in the income statement under "Net gains and losses on other assets".

2.1.3.4 Non-current assets held for sale and related liabilities, discontinued operations

A non-current asset or a disposal group is classified as held for sale when its carrying amount will be recovered principally through a sale transaction rather than through continuing use. The asset or disposal group is reported on a separate line of the statement of financial position when it is highly probable that the sale of the asset will be completed within 12 months.

As soon as they are classified as held for sale, non-current assets and disposal groups are carried at the lower of their carrying amount and fair value less costs to sell and are no longer depreciated/amortised. However, the financial assets continue to be measured in accordance with the principles of IFRS 9.

Any impairment recognised on non-current assets held for sale and disposal groups is recognised in profit or loss and may be reversed in subsequent periods.

An operation is considered as discontinued when the related assets fulfil the criteria for classification as held for sale or when the operation has been sold. The profits or losses from discontinued operations are shown on a single line of the income statement for the periods presented. The reported amounts include the net profit or loss of the discontinued operations up to the date of sale and the after-tax disposal gain or loss.

2.1.3.5 Foreign currency transactions

At the end of each reporting period, monetary assets and liabilities denominated in foreign currencies are converted into each Group entity's functional currency at the year-end exchange rate.

The resulting conversion gains and losses are recognised in profit or loss. As an exception to this principle, for monetary assets classified as financial assets at fair value through other comprehensive income, only the portion of the conversion gain or loss calculated on these assets' amortised cost is recognised in profit or loss, with the other portion recognised in equity.

Concerning non-monetary assets:

- assets measured at historical cost are converted at the exchange rate on the transaction date;
- assets measured at fair value are converted at the exchange rate on the fair value measurement date.

Conversion gains and losses on non-monetary items are recognised in profit or loss if the gain or loss on the non-monetary item is also recognised in profit or loss, or in equity if the gain or loss on the non-monetary item is also recognised in equity.

2.1.3.6 Employee benefits

Benefits granted to the Group's employees fall into four categories:

- short-term benefits, such as salaries, paid annual leave, matching payments to employee savings plans and discretionary and non-discretionary profit-sharing;

- post-employment benefits, corresponding to pensions, statutory length-of-service awards payable to employees on retirement, end-of-career arrangements and medical cover;
- other long-term benefits such as jubilee, long-service benefits and time savings accounts;
- termination benefits.

2.1.3.6.1 Short-term benefits

Short-term benefits are employee benefits expected to be paid within 12 months of the end of the reporting period in which the employees render the related service. A liability and an expense are recognised when the Group has a contractual obligation or constructive obligation arising from past practices.

2.1.3.6.2 Post-employment benefits

Post-employment benefits comprise defined contribution plans and defined benefit plans.

Obligations under defined contribution plans are generally covered by contributions paid to a pay-as-you-go pension scheme or to an insurance company that manages benefit payments or by the French State for public service employees. In all cases, the contributions are in full discharge of any future liability for the Caisse des Dépôts Group. Contributions paid are expensed as incurred.

Defined benefit plans are plans under which the Group has an obligation to pay agreed benefits to current and former employees. These plans give rise to a medium- or long-term liability which is measured and provisioned in the financial statements.

In accordance with IAS 19, the projected benefit obligation is measured by the projected unit credit method based on a range of actuarial, financial and demographic assumptions. The projected unit credit method sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately to build up the final obligation. Units of benefit entitlement are determined based on the discounted present value of the future benefits.

The discount rate used by the Group is determined by reference to the yield on investment-grade corporate bonds with a similar maturity to that of the benefit obligation within the same monetary area.

The provision for defined post-employment benefits is therefore equal to the present value of the defined benefit obligation at the end of the reporting period, calculated by the projected unit credit method, less the fair value of the plan assets, if any.

The provision is adjusted at the end of each reporting period to reflect changes in the projected benefit obligation.

All gains or losses on remeasuring the net defined benefit obligation (asset) are recognised immediately in equity under "Other comprehensive income" and are not reclassified to profit or loss in subsequent periods. These include actuarial gains and losses arising on changes in actuarial assumptions and experience adjustments, as well as the return on plan assets and the change in any asset ceiling (excluding amounts taken into account in calculating the net interest cost on the defined benefit obligation (asset)).

The annual cost of defined benefit plans recognised in personnel expenses reflects:

- the cost of services rendered by employees during the period (service cost);
- the cost of services rendered by employees in previous periods (past service cost), resulting from plan amendments or curtailments, as well as gains and losses on any plan settlements;
- the net interest cost related to discounting the net defined benefit obligation (asset). The interest rate used to calculate the expected return on plan assets is the same as the discount rate applied to the provision.

Outside France, Group employees are covered by various compulsory contributory pension schemes. The corresponding obligations are funded by contributions to company pension funds or recognised in the financial statements of the companies concerned.

2.1.3.6.3 Other long-term benefits

Other long-term benefits are benefits other than short-term benefits, post-employment benefits and termination benefits, that are not expected to be paid in the 12 months after the end of the period in which the employees render the related service.

They are measured and recognised on a similar basis to defined post-employment benefits, except that actuarial gains and losses are recognised directly in profit or loss.

2.1.3.7 Provisions for commitments on home savings contracts

Obligations related to home savings accounts (CEL) and home savings plans (PEL) reported under "Amounts due to customers" can have potentially unfavourable consequences for the Group, which are covered by provisions recorded in liabilities (under "Provisions"). Changes in these provisions are taken into account for the determination of the net interest margin included in net banking income.

The provisions are estimated on the basis of customer behaviour statistics and market data for each generation of plans, in order to cover the future cost arising from the products' potentially unfavourable interest rate terms relative to the rates offered to retail customers for similar products for which the remuneration is not regulated. The provisions only concern obligations in respect of home savings accounts and plans in progress at the date the provision is calculated.

Provisions are calculated for each generation of home savings plan, without offsetting obligations between generations, and for all the home savings accounts, which are considered as representing a single generation.

During the saving phase, the provision is measured as the difference between expected average savings deposits and expected minimum savings deposits, determined in both cases on a statistical basis taking into account observed historical customer behaviours.

During the borrowing phase, the provision concerns outstanding loans not yet due at the reporting date and future loans that are considered as statistically probable based on statement of financial position deposits at the calculation date and observed historical customer behaviours.

A provision is recorded when the net present value of future income is negative for a given generation of loans.

The net present value of future income is assessed relative to the interest rates offered to retail customers on equivalent savings and lending products for similar periods and with similar commencement dates.

2.1.3.8 Share-based payments

Share-based payments consist of payments based on the equity instruments of Group subsidiaries that are equity settled or cash settled for amounts that reflect the value of the underlying shares.

Most of the share-based payment plans set up by Group entities are equity-settled plans.

IFRS 2 also applies to rights issues carried out under the Group's employee savings plans.

The employee benefit corresponds to the difference, at the purchase date, between the fair value of the acquired shares and the price paid by employees, multiplied by the number of shares purchased. At the end of each reporting period, the number of options likely to vest is reviewed. Where appropriate, the estimates are revised and the effect of the revision is recognised in the income statement with a corresponding adjustment to equity.

2.1.3.9 Property, plant and equipment and intangible assets

Property, plant and equipment and intangible assets recognised in the consolidated statement of financial position correspond to operating assets and are accounted for in accordance with IAS 16 "*Property, Plant and Equipment*", IAS 36 "*Impairment of Assets*" and IAS 38 "*Intangible Assets*".

Owner-occupied properties are initially recognised at cost, corresponding to their purchase price, any directly attributable expenditure and any borrowing costs.

Land is not depreciated. Other assets are depreciated from the date they are put into service by the straight-line method. This method consists of recording a constant annual charge to write off the cost of the asset less its residual value over the asset's estimated useful life.

Government grants are recorded as a deduction from the carrying amount of the assets they serve to finance.

When an asset comprises several items with different patterns of use that may require replacement at regular intervals or generate economic benefits at differing rates, each such item is recognised separately and depreciated over its estimated useful life when the amounts involved are material.

With regard to the real estate portfolio, the items of property and equipment and related depreciation periods are as follows:

- building shell: 20 to 100 years;
- roof/façade: 20 to 60 years;
- fixtures: 10 to 25 years;
- fittings and technical installations: 10 to 25 years;
- major maintenance work: 15 years.

The depreciable amount of each asset is determined by deducting the residual value from its cost, where said value is both material and measurable. Residual value is defined as the estimated amount that an entity would currently obtain from disposal of the asset, after deducting the estimated costs of disposal, if the asset were already of the age and in the condition expected at the end of its useful life.

Software and development costs (including external charges and personnel expenses directly attributable to the project) meeting the IAS 38 capitalisation criteria are recognised in assets and amortised over periods of between three and seven or ten years depending on their useful lives.

At the end of each reporting period, an impairment test is performed if there is any internal or external indication that an asset may be impaired. Impairment tests are performed by comparing the carrying amount of the asset with its recoverable amount. Where the recoverable amount of the individual asset cannot be estimated, the impairment test is performed at the level of the cash-generating unit (CGU) to which the asset belongs.

If the recoverable amount is less than the carrying amount, the carrying amount is reduced to the recoverable amount by recording an impairment loss. If the recoverable amount increases in subsequent periods, the impairment loss is reversed.

Gains or losses on the disposal of fixed assets are recognised under "Net gains and losses on other assets" in the income statement.

2.1.3.9.1 Contractual customer relationships

When an insurance business is acquired, the fair value of the future economic benefits expected to flow to the Group from the current contractual customer relationships is recognised as an intangible asset, provided that a sufficiently reliable estimate can be made of premium renewals (estimate already prepared for the calculation of MCEV). Contractual customer relationships are amortised on a straight-line method over their useful life, as estimated based on the period during which the economic benefits are expected to be consumed (as projected for MCEV calculation purposes):

- individual death & disability policies in Brazil: 10 years;
- individual death & disability policies in France: 15 years.

When an asset management business is acquired, the fair value of the future economic benefits expected to flow to the Group from the current contractual customer relationships is recognised as an intangible asset. For acquired management contracts and dedicated funds managed on behalf of institutional customers, an intangible asset is recognised under "Contractual customer relationships". The intangible asset is amortised on a straight-line basis over the estimated life of the contractual customer relationship, as determined on a runoff basis taking into account the probability of the contracts being renewed.

2.1.3.9.2 Distribution agreements

The value of a distribution agreement represents the future cash flows expected to be generated by new business written through the partner network under the agreement. The intangible asset recognised for a distribution agreement is determined based on the agreement's specific terms and conditions and is amortised over the term of the agreement taking into account a residual value where appropriate.

2.1.3.10 Investment property

Investment property is property (land or building) held to earn rental income or for capital appreciation or both, rather than for use in the production or supply of goods or services or for administrative purposes, or for sale in the ordinary course of business.

The Group has elected to measure investment property using the cost model, as allowed by IAS 40, except for properties held in portfolios underlying direct participating insurance contracts and investment contracts with discretionary participation features measured using the VFA model, which are measured at fair value.

The fair values of properties measured using the cost model are also disclosed in these notes to the financial statements. Fair value is the price that would be received to sell a property or shares in a non-trading property company in an orderly transaction.

Amortisation and impairment of distribution agreements are recognised in the income statement under "Net depreciation, amortisation and impairment of property, equipment and intangible assets".

2.1.3.10.1 Impairment

At the end of each reporting period, properties are assessed to determine whether there is any indication that they may be impaired. If there is an indication of impairment, the recoverable amount of the property concerned is estimated and an impairment test is performed.

The recoverable amount of a property is the higher of its value in use and its market price less costs to sell. An impairment loss is recognised if the recoverable amount of the property is less than its carrying amount. Otherwise, no impairment loss is recorded.

2.1.3.11 Impairment of non-amortisable intangible assets and goodwill

Goodwill and other intangible assets with an indefinite useful life are not amortised but are tested for impairment at annual intervals.

The impairment tests are performed at the level of cash-generating units (CGUs), representing the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets.

Impairment tests are performed by comparing the recoverable amount of the asset or CGU to its carrying amount.

The recoverable amount of an asset or a CGU is the higher of its fair value less the costs of disposal and its value in use.

If the carrying amount is greater than the recoverable amount, an impairment loss is recognised in the income statement for the difference between these two amounts.

Impairment losses recognised against intangible assets with an indefinite useful life are reversed in the income statement if there has been a change in the estimates used to determine the asset's recoverable amount or if there are no longer any indications of impairment. However, impairment losses recognised against goodwill relating to subsidiaries cannot be reversed.

2.1.3.12 Leases

The Caisse des Dépôts Group may be the lessor or lessee in a lease.

2.1.3.12.1 Leases in which the Caisse des Dépôts Group is the lessor

Leases are analysed based on their substance and financial reality. They are recognised as either finance leases or operating leases.

A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to ownership of the underlying asset to the lessee, regardless of whether or not ownership is ultimately transferred.

Leases are classified as finance leases in particular when:

- the lease transfers ownership of the underlying asset;
- the lessee has the option to purchase the underlying asset at a price sufficiently lower than its fair value at the date the option becomes exercisable;
- the lease term is for the major part of the economic life of the underlying asset;
- the present value of the future lease payments amounts to substantially all of the fair value of the leased asset at the inception of the lease;
- the leased asset is of such a specialised nature that only the lessee can use it without major modifications.

A lease is classified as an operating lease if it does not transfer substantially all the risks and rewards incidental to ownership of the underlying asset to the lessee.

Finance leases

Finance leases are considered equivalent to the sale of an asset to the lessee financed by a loan from the lessor. Based on an analysis of the economic substance of the finance lease transactions, the lessor:

- removes the leased asset from the statement of financial position;
- records a receivable due from the customer/lessee under “Loans and receivables due from customers at amortised cost” in an amount representing the lease payments receivable by the lessor under the lease, discounted using the interest rate implicit in the lease, plus any unguaranteed residual value accruing to the lessor;
- recognises deferred taxes for temporary differences relating to the receivable and the net carrying amount of the leased asset;
- breaks down the income corresponding to lease payments into interest and repayment of principal.

Operating leases

The lessor recognises leased assets in the statement of financial position under “Investment property” and “Owner-occupied property and equipment” depending on the nature of the underlying asset. Lease income is recognised on a straight-line basis within net banking income under “Income from other activities” in the income statement.

2.1.3.12.2 Leases in which the Caisse des Dépôts Group is the lessee

Leases are recognised in the statement of financial position on the date on which the leased asset is made available. The lessee recognises a right-of-use asset representing its right to use the underlying leased asset for the estimated term of the contract and a lease liability representing its obligation to make lease payments over the same term. Depending on the underlying leased asset, the right-of-use asset is presented either in “Investment property” or in “Owner-occupied property and equipment” in the statement of financial position. The lease liability is presented in “Accrued expenses, deferred income and other liabilities” in the statement of financial position.

2.1.3.13 Provisions

Provisions recorded under liabilities, other than those relating to losses on financial instruments, commitments to home savings contracts and employee benefits, are mainly provisions for claims and litigation, fines and tax risks.

A provision is recorded when the Group has a present obligation arising from past events, the settlement of which is expected to result in an outflow of resources embodying economic benefits without there being any expectation that economic benefits with at least an equivalent value will be received. The obligation may be legal,

The lease term is the non-cancellable period of the lease adjusted together with the periods covered by an option to extend the lease if the lessee is reasonably certain to exercise that option and an option to terminate the lease if the lessee is reasonably certain not to exercise that option. It cannot be longer than the period during which the contract is enforceable. The contract is no longer enforceable when the lessee and the lessor each have the right to terminate the lease with no more than an insignificant penalty.

The lease liability is recognised as the present value of lease payments remaining over the lease term. Lease payments include fixed payments, variable lease payments that depend on an index or rate, and amounts expected to be payable by the lessee under residual value guarantees, purchase options or penalties for early termination of the lease. Variable lease payments that do not depend on an index or a rate are excluded from the lease liability calculation and are recognised in “General operating expenses” in the income statement.

The discount rate used to calculate the lease liability and right-of-use asset is the lessee’s incremental borrowing rate over the lease term at the date the contract is signed, where the implicit rate cannot be readily determined.

Cash repayments of the lease liability are broken down into a principal portion and an interest portion.

The right-of-use asset is measured as the amount of the initial measurement of the lease liability plus any lease payments made at or before the commencement date, and any costs of restoration. It is depreciated over the estimated term of the lease.

The lease liability and the right-of-use asset may be adjusted if the lease is modified, the lease term is reassessed or the lease payments are revised due to application of indices or rates.

Deferred taxes are recognised for temporary differences related to the right-of-use asset and the lease liability.

regulatory, contractual or constructive. The amount recognised as a provision is the best estimate of the expenditure required to settle the present obligation at the end of the reporting period. Provisions are discounted when the effects of discounting are material, using a discount rate that reflects current market assessments of the time value of money and the risks specific to the liability. Increases in the provision to reflect the passage of time are recognised in “Interest expense”.

2.1.3.14 Current and deferred taxes

2.1.3.14.1 Current taxes

Current income tax expense is determined on the basis of the taxable profits of each entity or tax group, by applying the tax rates and rules in force in the country in which the entity or tax group is established.

Current tax assets and liabilities reflect the position of Group entities in relation to the payment of current taxes to the tax authorities in each host country.

2.1.3.14.2 Deferred taxes

Deferred taxes are recognised using the liability method for temporary differences between the carrying amount of assets and liabilities and their tax base. Under this method, deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period. The effects of changes in tax rates are recognised in the period in which the change is enacted or substantively enacted.

As an exception, no deferred taxes related to income taxes resulting from application of the OECD's "Pillar Two" rules are recognised (see amendments to IAS 12 "*International Tax Reform – Pillar Two Model Rules*" - EU Regulation No. 2023/2468 of 8 November 2023).

Deferred taxes are calculated at the level of each tax entity and deferred tax assets are recognised only to the extent that it is probable that future taxable profits will be available against which they can be utilised.

Certain directly or indirectly held Group entities form part of a tax group.

Income tax expense is recognised in the income statement, except for tax on items recognised directly in equity, which is also recorded in equity.

Deferred taxes are not discounted.

2.1.3.15 Share capital

In light of its status, Caisse des Dépôts does not have any share capital.

2.1.3.16 Revenue from contracts with customers

Revenue from contracts with customers has been recognised in accordance with IFRS 15 since 1 January 2018.

This standard covers the recognition of revenue applicable to all contracts with customers regardless of business sector, with the exception of leases, insurance contracts and financial instruments, which fall within the scope of IFRS 16, IFRS 17 and IFRS 9, respectively.

How revenue is recognised in the income statement must reflect the pattern of transfer to the customer of control of the goods or service sold, for the amount to which the seller expects to be entitled in exchange for the said goods or service. This recognition method applies to sales of goods and merchandise, the provision of services and long-term contracts.

The approach developed in IFRS 15 consists of a series of five steps, from identifying the contract with the customer to recognising revenue in profit or loss:

- identifying the contract;
- identifying performance obligations;

- determining the transaction price;
- allocating the transaction price to performance obligations; and
- recognising revenue when performance obligations have been satisfied.

Depending on the conditions for the transfer of control of the goods and services promised to the customer, revenue is recognised:

- at a point in time, when control of the goods and services is transferred to the customer on a given date; or
- over time, reflecting how the performance obligation is satisfied by the seller.

These provisions mainly concern the Caisse des Dépôts Group entities that conduct an industrial or commercial activity.

Revenue from contracts with customers is reported in the income statement under "Income from other activities".

2.1.3.17 Interest income and expense

Interest income and expenses are recognised in the income statement under "Interest income" and "Interest expense" for all financial instruments measured at amortised cost using the effective interest rate method, namely loans and borrowings from credit institutions and customers, the securities portfolio at amortised cost, debt securities, subordinated debt and lease liabilities. Accrued interest and interest due on debt instruments recognised in the portfolio of financial assets at fair value through other comprehensive income and hedging derivatives is also recorded, it being specified that accrued interest on cash flow hedging derivatives is recorded in the income statement together with accrued interest on the hedged item.

However, interest accrued and due on financial assets and liabilities at fair value through profit or loss (excluding hedging derivatives) is recognised in the income statement under "Net gains and losses on financial instruments at fair value through profit or loss".

In accordance with the IFRS IC decision of January 2015, interest income resulting from a negative effective interest rate on a financial asset does not meet the definition of interest revenue in the meaning of IFRS 15. Since 1 January 2021, it has therefore been recognised under "Interest expense" in the income statement, and not under "Interest income". The same applies to interest expense resulting from a negative effective interest rate on financial liabilities, which has been recognised under "Interest income" in the income statement since 1 January 2021.

2.1.3.18 Fee and commission income and expense

In accordance with IFRS 15 “*Revenue from Contracts with Customers*”, fee and commission income is recognised in profit or loss when the related performance obligations are satisfied:

- when the performance obligation (service) is satisfied over time, the fee is recognised over the service period (payment media processing fees);
- when the performance obligation is satisfied at a point in time, the fee or commission is recognised in the income statement when the service is provided or the transaction is executed (intermediary commission, payment incident fee);

- variable fees are recognised in profit or loss only when it is highly probable that the fee will not be reduced significantly compared to the recognised amount.

These fees are presented under “Fee and commission income” and “Fee and commission expense” in the income statement.

However, fees that represent additional interest (loan fees) are an integral part of the effective interest rate and are recognised in interest income and expense (“Interest income” and “Interest expense” in the income statement), and not as fees and commissions.

2.1.3.19 Cost of credit risk

The cost of credit risk includes:

For banking activities:

- impairment losses and reversals on financial assets at amortised cost and at fair value through other comprehensive income that may be reclassified to profit or loss;
- impairment losses and reversals on finance lease receivables;
- changes in provisions relating to financial guarantees given and financing commitments;
- discounts on restructured loans and recoveries of loans written down in full;
- bad debt write-offs.

The banking activities’ cost of credit risk is presented as a component of operating profit, below net banking income.

For insurance activities:

- loss allowances, reversals and write-offs on financial investments held to back insurance liabilities.

These are presented as a component of net banking income, on the line “Cost of credit risk on financial investments of insurance activities”.

2.2 Notes to the consolidated income statement

2.2.1 Interest income and expense

(in millions of euros)	31.12.2025			31.12.2024

Debt instruments	(1,592)	(1,208)
Dividend income	1,580	1,416
Equity instruments	1,580	1,416
TOTAL NET GAINS AND LOSSES ON FINANCIAL INSTRUMENTS AT FAIR VALUE THROUGH OCI	(12)	208

2.2.5 Net gains and losses resulting from derecognition of financial assets at amortised cost

(in millions of euros)	31.12.2025	31.12.2024
Gains resulting from derecognition	5	5
Losses resulting from derecognition	(102)	(20)
TOTAL NET GAINS OR LOSSES RESULTING FROM DERECOGNITION OF FINANCIAL ASSETS AT AMORTISED COST	(97)	(15)

The carrying amounts of financial assets at amortised cost derecognised during the period are as follows:

(in millions of euros)	31.12.2025	31.12.2024
Securities at amortised cost	1,850	2,454
Loans and receivables due from customers at amortised cost	242	250
TOTAL CARRYING AMOUNTS OF FINANCIAL ASSETS AT AMORTISED COST DERECOGNISED	2,092	2,704

2.2.6 Income and expenses from other activities

(in millions of euros)	31.12.2025		31.12.2024	
	Income	Expenses	Income	Expenses
Income and expenses from investment property	2,013	(1,136)	2,107	(1,506)
Income and expenses from other activities	36,642	(5,003)	41,622	(5,944)
TOTAL INCOME AND EXPENSES FROM OTHER ACTIVITIES	38,655	(6,139)	43,729	(7,450)

Until the first half of 2025, income and expenses from other activities mainly concerned the Group's industrial and commercial activities, including La Poste, Icade, Compagnie des Alpes and Transdev. Most of the change between 2024 and 2025 is attributable to the fact that Transdev has been accounted for using the equity method since 1 July 2025.

2.2.7 General operating expenses

(in millions of euros)	31.12.2025	31.12.2024
Employee benefits expense, including amounts attributable to insurance activities	(18,182)	(20,444)
Employee benefits expense attributable to insurance activities	576	502
Employee benefits expense⁽¹⁾	(17,606)	(19,942)

INCOME TAX BENEFIT (EXPENSE) FOR THE PERIOD	(1,246)	(897)

2.2.11.2 Reconciliation of theoretical and effective tax rates

<i>(in millions of euros)</i>	31.12.2025	31.12.2024
Net profit (loss) attributable to owners	2,601	3,046
Non-controlling interests	736	705
Share of profit (loss) of equity-accounted companies	(438)	(925)
Change in value of goodwill	26	(98)
Net profit (loss) from discontinued operations		(1)
Income tax benefit (expense)	1,246	897
Profit (loss) before tax, change in value of goodwill and share of profit (loss) of equity-accounted companies	4,171	3,624
Theoretical tax rate ⁽¹⁾	25.83%	25.83%
Theoretical tax expense	(1,077)	(936)
Effect of differences in tax rates	(122)	(86)
Effect of permanent differences	17	286
Effect of the SIIC regime and other exempt real estate operations	126	42
Net effect of deferred tax recognition	(93)	(243)
Tax credits	84	34
Exceptional levy on profits	(209)	
Other	28	6
EFFECTIVE INCOME TAX EXPENSE	(1,246)	(897)

⁽¹⁾ Including the 3.3% social solidarity contribution.

The effective tax rate in 2025 was 29.9%, based on pre-tax profit restated to exclude share of profit of equity-accounted companies and changes in the value of goodwill for €4,171 million, versus 24.8% at 31 December 2024.

At 31 December 2025, the tax expense includes the exceptional levy on profits introduced by the Finance Act of 2 February 2025. This contribution is calculated based on the average corporate income tax due in respect of the 2024 and 2025 financial years.

Contribution to banking resolution mechanisms

The Single Resolution Fund (SRF) is an emergency fund available to be used in the event of a crisis. It is managed by the Single Resolution Board (SRB) and contributes to the stability of the financial system within the Banking Union.

One of the principles of the resolution regime concerns the contribution of shareholders and creditors to support the cost of a resolution (“bail-in”). However, the SRF can be used to supplement the measures deployed during the resolution process following the failure of a bank, to finance certain resolution measures (i.e., asset transfers and vendor warranties) or to compensate shareholders or creditors whose loss in resolution would have exceeded that suffered in a compulsory liquidation.

The SRF was introduced by Regulation (EU) No. 806/2014 (Single Resolution Mechanism Regulation – SRMR) with the aim of establishing uniform resolution funding practices under the Single Resolution Mechanism (SRM).

In France, credit institutions headquartered in mainland France (excluding overseas countries and territories) are the main contributors to the SRF. The largest investment firms are the other contributors to the SRF. Entities subject to the resolution mechanism but not covered by the SRF contribute to France’s national resolution fund (FGDR), which can also be used to help fund a resolution.

The target amounts for the two funds – to cover at least 1% of the total guaranteed deposits of the member institutions – had been reached as of 1 January 2025, following a gradual build-up of resources.

The SRF/FGDR is financed by annual contributions paid by all participating institutions within the Banking Union. A certain percentage of the annual contributions may be settled in the form of irrevocable payment commitments (see Note 2.5.1 “Commitments given and received” under “Irrevocable payment commitments (IPCs) to the SRF”), secured by the payment of a cash guarantee deposit remunerated at the ECB reference rate.

For the 2025 contributions, no call for contributions has been made for the SRF or FGDR, as the target amounts have been achieved, according to information communicated by the resolution authorities.

At 31 December 2025, the guarantee deposit (EPI) paid to the SRF totalled €102 million, unchanged from end-2024.

Within the CDC Group, the entities contributing to the bank resolution mechanisms are the La Banque Postale group and SFIL⁽¹⁾.

2.3.9 Non-current assets held for sale, non-current liabilities related to assets held for sale and discontinued operations

(in millions of euros)

	31.12.2025	31.12.2024
Total non-current assets held for sale and discontinued operations	557	25,603
Total liabilities related to non-current assets held for sale and discontinued operations	178	22,588

The estimated market value of held-for-sale investment property recognised at amortised cost was €538 million at 31 December 2025 and €194 million at 31 December 2024.

2.3.9.1 Disposal of CNP Cyprus Insurance Holdings and CNP UniCredit Vita

CNP Cyprus Insurance Holdings and CNP UniCredit Vita were sold in the first half of 2025, representing €17,287 million in assets held for sale and €16,283 million in related liabilities at 31 December 2024.

2.3.9.2 Icade Santé

The residual stake in Icade’s Healthcare business (Icade Santé) is no longer eligible for classification under IFRS 5, as its sale is no longer considered highly likely in the next 12 months owing to the

prevailing market environment. Accordingly, the residual fair value in Icade Santé, representing €1,015 million at 31 December 2025, is now reported in financial assets at fair value through profit or loss.

2.3.9.3 Transdev

On 1 July 2025, the Rethmann group completed the acquisition from Caisse des Dépôts of an additional 32% stake in Transdev, bringing its interest in Transdev to 66%. The Caisse des Dépôts Group, with a 34% stake, significant rights and an active role in the governance, confirms its position as a long-term partner.

At 31 December 2024, the Transdev group’s assets and liabilities respectively represented €7,054 million and €6,302 million, included in “Non-current assets held for sale” and “Liabilities related to non-current assets held for sale”, respectively.

Caisse des Dépôts’ interest in Transdev has been accounted for using the equity method since 1 July 2025.

(1) Bpifrance, which is accounted for using the equity method, also contributes to the SRF.

2.4.8 Notes relating to insurance activities

2.4.8.1 Reconciliation of insurance contracts on the balance sheet and in the notes to the financial statements, for contracts valued using the BBA and VFA models

Intra-group margin

La Banque Postale distributes and manages insurance contracts on behalf of its subsidiaries. This activity generates distribution and management costs which are included in the Group's income statement.

The insurance subsidiaries pay insurance contract distribution and management fees to La Banque Postale. These fees include a mark-up charged by La Banque Postale to its subsidiaries.

Under IFRS 17, the component representing the insurance company's estimated obligation to policyholders – the present value of future cash flows or Best Estimate – incorporates all the costs associated with insurance activities, including the costs of distributing and managing insurance contracts.

The insurance subsidiaries' Best Estimates include the insurance contract distribution and management fees, with the mark-up.

At group level, the margin is not included in the Best Estimate, as it represents a profit and not a cost. It is therefore included in the CSM (representing future profits). As a result, the group vision of CSM is different from the sum of the insurance subsidiaries' CSMs, i.e., from the insurance vision of CSM. Group CSM includes a component representing the intra-group margin, which is determined by applying an estimated cost/income ratio to distribution and management fees. This margin is included in the CSM at group level.

(in millions of euros)	Present value of future cash flows	Risk adjustment for non-financial risk	Contractual service margin (CSM)	Total
Closing net balance – Group vision at 31 December 2025^(a)	357,313	1,527	17,644	376,484

Irrevocable payment commitments (IPCs) to the SRF

Irrevocable payment commitments (IPCs) given to the Single Resolution Fund (SRF) are included in "Guarantee commitments given to customers" for €102 million at 31 December 2025, unchanged from end-2024 (see Note 2.3.8 "Prepayments, accrued and deferred income and other assets and liabilities").

These IPCs represent a contractual promise to perform a payment obligation in the event of a resolution measure involving the Fund. In such cases, the Single Resolution Board (SRB) calls on all or part of the irrevocable payment commitments in order to restore the proportion of irrevocable payment commitments in the Fund's available financial resources as set by the SRB. At 31 December 2025, the Group had made no provision for the risk of a partial or total call of IPCs, as this is unlikely to occur in the foreseeable future. The SRF can call on banking institutions to settle their IPCs only in the event of resolution measures to which the SRF is required to contribute. The probability of an EU banking institution being the subject of a resolution is remote for the following reasons:

- the regulatory framework established more than ten years ago by the Banking Union, which includes capital requirements adjusted according to the profile of institutions, a high level of supervision by the ECB and stress tests, ensuring the resilience of the European banking system;

- if the resolution of a banking institution were to take place (instead of a liquidation):
 - the preferred resolution strategy would consist of a bail-in, which avoids using taxpayers' money to help banks in difficulty,
 - the MREL minimum capital requirement applicable to EU banks under European regulations ensures that these banks have sufficient resources to absorb any losses in the event of default and to recapitalise.

In view of the court decision of 13 November 2025 in favour of the SRB, the withdrawal of a licence from a banking institution represents an additional scenario in which all irrevocable payment commitments would be called (outflow of resources). However, as the CDC Group prepares its financial statements on a going concern basis, there is no foreseeable risk that any Group entity will lose or request the withdrawal of its licence. The estimated outflow of resources was therefore deemed to be zero.

2.5.2 Exposure to credit risk on financing commitments and guarantees given

- Financial instruments "Measured using observable inputs" (Level 2 of the hierarchy) concern instruments that are measured using the prices of:
 - similar-type instruments quoted on an active market, from the same issuer or guarantor. In that case, the prices and other observable market inputs are used and an adjustment may be made to account for the instrument's degree of illiquidity, or
 - identical or similar-type instruments quoted on a non-active market on which regular, observable transactions take place, or financial instruments measured using inputs other than quoted prices that are observable.

These include:

- structured products valued by the Group, arrangers or external valuers,
- OTC derivatives contracts,
- money market securities other than BTANs measured based on the zero coupon price curve plus a spread.

Derivatives are classified based on an analysis that combines the observability of the market inputs used in the valuation and the robustness of the valuation models measured in terms of effectiveness in providing a valuation within market consensus. This approach shows that the derivatives used by the Caisse des Dépôts Group to hedge its activities fall mainly into Level 2.

- Financial instruments "Measured using unobservable inputs" (Level 3 of the hierarchy) concern financial instruments measured using inputs not based on observable market data. These are defined as inputs based neither on observable market transactions involving the same instrument at the measurement date, nor on observable market data available at the same date.

These instruments are mainly unlisted participating interests, asset-backed securities and hedging derivatives.

The market value of unlisted participating interests classified as financial assets at fair value through other comprehensive income is calculated by reference to certain criteria such as net assets, future profitability and discounted future cash flows.

2.6.2 Change in value of financial instruments measured at fair value using a technique based on unobservable inputs (Level 3)

2.7 Risk factors

2.7.1 Risk factors and risk appetite strategy

To carry out its public-interest missions and fulfil its role as a long-term investor, Caisse des Dépôts has adopted risk appetite principles that meet the following objectives:

- **protect the savings and deposits** entrusted to it as a fiduciary manager of private funds;
- implement a strategy that focuses on a **long-term vision** (at least five years) to maintain the ability to take **countercyclical** action;
- support investment and financing projects **conductive to the balanced and sustainable development of the economy and society**, with the aim of generating future financial, environmental and social benefits, and develop innovation to serve the regions, their people and the economic fabric;
- apply a **financial** management and diversification policy to its investments and financing in order to **consolidate its financial base** and strengthen its equity for the benefit of its public-interest missions, especially through the integration of systemic risks such as climate change;
- **protect Caisse des Dépôts' reputation** by complying with applicable laws and regulations, adopting best ethical practices and **carefully managing non-financial risks** that might hurt its image.

The subsidiaries of Caisse des Dépôts adhere to this general framework and integrate specific measures in their own risk management policies based on the nature of their business and their business models.

Risk appetite means the level of risk of any nature that the Group or a Group entity is prepared to accept or tries to avoid in order to achieve its strategic and operational objectives. For entities governed by banking or financial regulations, their risk appetite is defined by the regulations applicable to financial institutions.

Every year, the Caisse des Dépôts Supervisory Board issues an opinion on the risk appetite levels and principles expressed in the framework documentation and risk appetite statement. For each major category of risk, qualitative principles and/or metrics are used to manage risk appetite. These metrics sometimes include thresholds and/or limits, taking into account Caisse des Dépôts'

financial objectives as well as its public-interest activities and the mandates entrusted to it by the public authorities. If these thresholds or limits are exceeded, an upward reporting process is in place so that a corrective action plan can be defined for getting such metrics back below the warning levels set.

The Group's financial entities ensure that their governing bodies discuss their own risk appetite at least once every year. This risk appetite must be compatible with the Group's risk appetite as approved by the Supervisory Board. It must be approved by the entity's executive and decision-making body.

Risk appetite is based on risk maps produced annually by the Group Risk Management division. The risk mapping exercise covers three interrelated risk maps encompassing the Caisse des Dépôts Group's entire risk universe, as represented by the Group's risk taxonomy. More detailed ESG risks have been added to the taxonomy to ensure a better link with the Group's non-financial performance statement.

The risk maps chart:

- the Public Institution's financial risks (Central Sector and Savings Funds);
- the Group's operational and compliance risks;
- the Group's consolidated risks.

They are submitted to the Executive Committee and the Supervisory Board.

The risk maps are a management tool used to identify and evaluate the significant risks faced by the Public Institution and the Group by virtue of their structure and business.

The risks arising on the activities of Caisse des Dépôts and its subsidiaries are classified according to the following risk families in the Group's risk taxonomy, which provides a common language for the Group's financial and non-financial entities:

- strategy and governance risks;
- operational and compliance risks;
- financial risks;
- insurance risks.

2.7.2 General structure of the Group's internal control, risk management and compliance system

2.7.2.1 Applicable regulations

In accordance with article 4 of Decree No. 2020-94 of 5 February 2020, as amended by Decree No. 2025-876 of 1 September 2025, the internal and external control system of Caisse des Dépôts must include:

- controls for internal procedures and operations;
- accounting and information-processing divisions;
- systems for measuring risks and results;
- systems for monitoring and managing risks;
- a documentation and information system;
- a system for monitoring cash and securities flows.

In accordance with articles 5 and 6 of the said decree, Caisse des Dépôts must ensure that this policy is applied to the entire Group, which means:

- mobilising all the resources needed to ensure that it is respected by all companies over which it exercises exclusive or joint control within the meaning of amended Regulation No. 99-07 of the French accounting standards setter (*Comité de la réglementation comptable* – CRC) of 24 November 1999 or the IFRS standards, amended Decree No. 2020-94 or any other internal control provisions applicable to these companies;
- ensuring that the systems put in place by these companies are consistent between themselves so that the risks can be measured, monitored and managed at the consolidated level;

- verifying that these companies have suitable control systems and procedures for producing relevant information and data that can be used for monitoring risks at the consolidated level.

The decree makes applicable the prudential provisions, with the necessary adjustments, of Regulation (EU) No. 575/2013 on prudential requirements for credit institutions and investment firms.

Internal control processes must also comply with the general regulations of the French financial markets authority (*Autorité des marchés financiers* – AMF) as well as with specific regulations applicable to the Group's different entities, namely:

- Government Order of 3 November 2014 on the internal control of companies in banking, payment services and investment services sectors licensed by the French banking and insurance supervisor (*Autorité de contrôle prudentiel et de résolution* – ACPR);
- Government Order of 6 January 2021 on internal controls related to the fight against money laundering and the financing of terrorism, asset freezes and bans on the provision or use of economic resources or funds, and the specialised businesses carried out by Group entities (portfolio management, insurance, etc.).

2.7.2.2 Key players in the internal control and risk management system

The Chairman and Chief Executive Officer of Caisse des Dépôts is responsible for the Group's entire internal control, risk management and compliance system. The Chairman and Chief Executive Officer defines the risk management and compliance policies for the Group, as well as the internal control principles (permanent controls and periodic controls). He receives key internal control and risk management reports.

The directors of Caisse des Dépôts and the heads of the subsidiaries are responsible for rolling out the policies defined by the Group within their own reporting scope, in accordance with any applicable regulations specific to them.

Within these entities, line managers set up effective risk management processes within their own divisions, particularly with regard to procedures and the segregation of tasks. They ensure that their operations comply with entity-specific provisions, including the applicable law and regulations, professional standards and management instructions, applied in line with the policies defined by the Group.

At Group level, the Group Risk Management division forms the second line of defence. The entities' risk management, permanent control and compliance functions implement the risk management (including compliance risk) and permanent control systems in their subsidiaries under the authority of the heads of these entities.

The Group Risk Management division is responsible for the Group risk management system. It develops and implements the risk management framework, taking into account the risk appetite defined by the Group.

Within the Group Risk Management division, the Operational Risk, Cyber and Control department manages the second-tier permanent control system that is independent of the operating entities, based on risk identification, incident monitoring, a second-tier control plan and actions to support the first line of defence. The second-tier control plan combines the principle of completeness of permanent controls with a risk-based approach. At Group level, the Operational Risk, Cyber and Control department is supported by the subsidiaries' permanent control teams and ensures that they correctly implement the Caisse des Dépôts Group's Permanent Control Charter.

Within the Legal Affairs, Compliance and Ethics division, the Ethics and Operational Compliance department, the Project Management and Digital Transformation department, the AML-CFT Financial Security department, the Group Summary and Coordination units and the Group Compliance and AML-CFT organisations are responsible for the system to prevent compliance risk, as defined in amended Decree No. 2020-94 of 5 February 2020. They monitor changes in the compliance regulations applicable to Caisse des Dépôts and how they are implemented within the Group. In addition, the Legal Affairs, Compliance and Ethics division's anti-fraud unit is responsible for defining and coordinating the Public Institution's overall anti-fraud policy, setting the Group framework and coordinating the anti-fraud organisation.

The General Inspectorate – Group Internal Audit division is responsible for periodic controls within the internal control system and works across the scope of the Public Institution and any exclusively or jointly controlled subsidiaries. It exercises a right to audit the subsidiaries and coordinates the Group's internal audit network made up of the subsidiaries' audit divisions, notably in order to coordinate actions relating to periodic controls at Group level. The General Inspectorate – Group Internal Audit division works independently, following a multi-year programme approved by the Executive Committee of Caisse des Dépôts, to which it reports on

a regular basis (performance of its engagements, implementation of recommendations). The renaming of the Group Audit division as the General Inspectorate – Group Internal Audit division highlighted the division's dual role, to conduct (i) assurance (internal audit) engagements under the multi-year audit programme, and (ii) inspection engagements which have in common that they are commissioned separately from the internal audit programme by the Group's Executive Committee or Supervisory Board.

Inspection engagements include:

- engagements specifically commissioned by the Executive Committee or the Supervisory Board to provide strategic guidance on sensitive issues;
- engagements commissioned following an incident, malfunction, breach of probity, etc.

2.7.2.3 Organisation

2.7.2.3.1 Permanent controls

The permanent control system covers all the activities of the divisions and subsidiaries and any other entities within their operational reporting scope, including activities deemed critical or important, within the meaning of banking and financial regulations, that have been outsourced to a service provider.

There are two levels of control: operational controls (first tier) and work by control function staff (second tier):

- the first tier consists of permanent controls designed to ensure that all operations processed are conducted properly. They are performed by operational teams and their respective managers, who ensure that the activities for which they are responsible are properly conducted. First-tier controls are designed around the principles of segregation of functions, delegation of power and approval limits, and the accuracy and completeness of all entries and data flows processed. First-tier controls also include controls carried out by automated transaction processing systems;
- the second-tier permanent controls are the responsibility of the Group Risk Management division and the subsidiaries' Permanent Control and Compliance Officers. This second tier contributes to the control of the compliance, security and approval of the operations carried out. It also aims to ensure that the first-tier control systems are appropriate to the risks involved and activities carried out. The controls are defined in reference to the risk maps, warning flags and events.

Caisse des Dépôts' permanent control principles are set out in the "Group Permanent Control Charter" reference document, which has been approved by the Executive Committee. The charter applies to all divisions of the Caisse des Dépôts Central Sector (the "divisions") and the entities that it controls. Permanent control is based on written procedures and formally documented control processes.

All second-tier control plans, control results, control events and corresponding action plans for the Caisse des Dépôts Central Sector are archived in a Group-wide application (PRISM). The other entities have developed applications for ensuring the reliability of the internal control audit trail as well as the traceability of any events identified.

To guarantee best practice and perform its periodic control duties by reference to the highest market standards, the General Inspectorate engages in an annual certification exercise, carried out by the French Institute of Internal Audit and Internal Control (IFACI) in accordance with the Institute of Internal Auditors' International Professional Practices Framework. On 12 December 2024, the Certification Committee certified Caisse des Dépôts' internal audit activities in accordance with the 2025 Professional Practices Framework for a further three-year period.

2.7.2.3.2 Risk management

The Group's entities are required to deploy risk management and prevention systems adapted to their businesses and the degree of inherent risk. These systems must comply with the principle of subsidiarity and be aligned with the Group's overall risk management framework, without prejudice to any specific provisions applicable to individual entities.

The risks of the Caisse des Dépôts subsidiaries are incorporated into the consolidated risk management system based on the different types of risk incurred and the nature of each subsidiary's business. In general terms, Caisse des Dépôts provides consolidated risk monitoring for:

- financial risks, covering the financial and real estate subsidiaries;
- non-financial risks, covering the main subsidiaries within the scope of consolidation.

Liquidity risk is managed by each of the Group entities.

2.7.2.3.3 Periodic controls

The third line of defence is provided by periodic controls and is performed by the General Inspectorate – Group Internal Audit division and the Audit network in accordance with the action principles and methodology set out in the Caisse des Dépôts Internal Audit Charter.

At the level of the Public Institution, IGAu has exclusive responsibility for performing periodic controls, based on the work of the other assurance functions (internal and external), following an assessment of the functions' level of maturity. In particular, IGAu uses the results of second-tier controls and the information contained in the risk maps to prioritise its audits. The first and second lines of defence can themselves be the subject of internal audits. Lastly, the conclusions of audits carried out by external bodies (ACPR, Court of Audit, Statutory Auditors, etc.) are directly taken into account for the purposes of drawing up the multi-year audit programme and defining the scope of audit engagements.

At the level of the subsidiaries, IGAu's work complements the local audits and inspections. IGAu has determined the principles of intervention in the subsidiaries, which involves covering a series of topics. In accordance with the principle of subsidiarity set out in the Group's Internal Audit Charter, IGAu may delegate responsibility for audits covering some of these topics to the local internal auditors, under certain conditions.

2.7.2.3.4 Supervision over the Group entities

The Group Risk Management division and the Legal Affairs, Compliance and Ethics division (for compliance issues) have a dotted-line reporting relationship with their counterparts in each of the Group's entities. The Head of Legal Affairs, Compliance and Ethics is responsible for the Group's AML-CFT system and acts as the Public Institution's Ethics Officer. The Legal Affairs, Compliance and Ethics division coordinates the Group's compliance function (in particular AML-CFT) and helps to monitor compliance risks at Group level.

The entities' Risk, Permanent Control and Compliance officers report back to the Group Risk Management division on their risk management systems.

Each Group financial subsidiary deploys risk monitoring applications and processes that are adapted to its own activities and structure.

Group-level indicators are monitored by the Group Risk Management division based on information provided by the subsidiaries (risk reporting, consolidated risk profile, etc.). In addition, CDC Group entities subject to AML-CFT regulations contribute to the AML-CFT reports required by the Legal Affairs, Compliance and Ethics division, deploying appropriate resources and guaranteeing the quality of the reported data, including the six-monthly AML-CFT risk exposure indicators.

Directors from Caisse des Dépôts sit on the subsidiaries' supervisory bodies and /or the audit and risk committees and ensure, working with the Group Risk Management division, that each entity complies with all of the Group's risk management measures as stated in the Group Risk Management Charter.

2.7.2.3.5 Governance bodies and reporting

Twice a year, under the chairmanship of the Chairman and Chief Executive Officer, the Risk, Permanent Control and Compliance Committee examines the status of risk management and internal control within the Group.

The Group Risk Management division presents:

- a monthly risk summary for the Executive Committee;

- a quarterly report on the Group's risk profile for the Executive Committee and Supervisory Board, mainly to verify compliance with the risk appetite levels;
- the results of the risk mapping exercise for the Executive Committee and Supervisory Board;
- the results of permanent controls are presented in half-yearly reports, in accordance with the requirements of amended Decree No. 2020-94 of 5 February 2020 on the internal and external control of Caisse des Dépôts. From 2025 onwards, these reports are organised around key processes.

The Legal Affairs, Compliance and Ethics division reports regularly to the Executive Committee on AML-CFT procedures and the compliance system as a whole, in accordance with the requirements of the Decree of 5 February 2020 on the internal and external control of Caisse des Dépôts.

The General Inspectorate – Group Internal Audit division reports regularly to the Executive Committee of Caisse des Dépôts. Its multi-year audit plan is updated every year and approved in turn by the Chairman and Chief Executive Officer (presentation to the Executive Committee) and the Supervisory Board (after a presentation to the Audit and Risk Committee and the Savings Funds Committee). In addition, it provides these same bodies with an annual report on the work of the Group's internal audit network and a progress report on the auditors' and regulators' recommendations (quarterly presentation to the Executive Committee and half-yearly to the Supervisory Board, after review by the Audit and Risk Committee and the Savings Funds Committee). Every year, the General Inspectorate – Group Internal Audit division also contributes to a presentation to the Supervisory Board on the structure and objectives of Caisse des Dépôts' internal control system.

An annual internal control report is prepared, provided to the Supervisory Board and submitted to the French Prudential Supervisory and Resolution Authority (ACPR), in accordance with amended Decree No. 2020-94 of 5 February 2020.

2.7.3 Financial risks

2.7.3.1 Credit and counterparty risk

2.7.3.1.1 Definition of credit risk and scope

Credit risk is the current or prospective risk of a loss on a receivable, due to a deterioration in the borrower's credit standing that may result in an inability to meet its payments when they fall due.

Credit risk within the Caisse des Dépôts Group is managed in accordance with Chapter IV, Section 2 of amended Decree No. 2020-94 of 5 February 2020, and specifically article 63 which requires Caisse des Dépôts to have a credit risk selection and management procedure in order to:

- centrally identify the balance sheet and off-balance sheet risks from a single counterparty or several counterparties considered to be a single group of related customers;
- establish different risk level categories based on qualitative and quantitative information, including for daily credit risk, if significant for its activity;
- understand and manage concentration risk by means of documented policies and procedures;
- understand and manage residual risk by means of documented policies and procedures;
- ensure its commitments are adequately diversified in accordance with its credit policy.

Within the Group, credit risk mainly affects the Caisse des Dépôts Central Sector, La Banque Postale and SFIL as a result of loans and receivables portfolios and securities portfolios measured at amortised cost or at fair value through other comprehensive income.

2.7.3.1.2 Credit risk management and governance

2.7.3.1.2.1 Governance

The Executive Committee set the fundamental risk management principles (strategic guidelines, values, risk appetite, governance, umbrella Group standards), which are then approved by the Supervisory Board and used by each of the regulated entities to define its own risk management system via its own governance, and by each business line of the Caisse des Dépôts Central Sector to define its priority actions and manage the associated risks, under the supervision of the Group Risk Management division.

The regulated entities have a procedural handbook covering credit, counterparty and regulation risks. These rules and procedures are consistent with the risk appetite defined at Group level and incorporated in the risk appetite of each entity.

The entities have methods for setting limits and IT systems for monitoring compliance with these limits. The procedures include rules for dealing with breaches of these credit, counterparty and regulation risk limits, and for escalating cases where necessary.

2.7.3.1.2.2 Policies for granting and securing guarantees

The processes for examining and granting guarantees within the Group are based on formal risk selection systems specific to each customer segment or type of activity, via risk analyses, credit ratings and/or scores, delegation rules and specialist committees (regional and national commitment committees, credit committees) and limit-setting rules. In terms of investment limits, third parties are systematically scored and allocated an individual limit designed to contain the total amount of the commitment. If necessary, these individual limits are combined with "group" limits which apply to exposure from a group of third parties considered to belong to the same business grouping. Individual limits and group limits may also be combined with sector or geographical limits designed to mitigate concentration risk.

The Caisse des Dépôts Group strives to minimise its credit risk. To do so, in addition to the quality of the file and of the counterparty which are essential to decision-making, the Group's entities seek guarantees to limit their losses in the event the counterparty defaults. The nature and level of the guarantees for loans vary by customer segment:

- legal professions (Caisse des Dépôts Central Sector scope): loans are usually but not always accompanied by a guarantee, either from a guarantor institution or in the form of a mortgage or personal surety. The rules for guarantees (real, personal and mixed sureties), which vary depending on the type of commitment and client, are defined in the commitments handbook and the general scale;
- home loans (La Banque Postale scope): the general principle is that any finance must be 100% covered by a guarantee, which provides an adequate level of cover that complies with the Group's risk management policy. The main forms of cover are first-ranking mortgages, pledges of financial products (life insurance policies, securities accounts, REIT units) and guarantees from organisations authorised and approved by La Banque Postale's Guarantor Referencing Committee, which uses three main organisations in France: Crédit Logement, CNP Caution and *Fonds de garantie de l'accession sociale* (FGAS);
- consumer credit (La Banque Postale scope): generally granted without guarantees or collateral;
- business loans (La Banque Postale scope): every commitment must be covered by a guarantee except where risk management rules provide otherwise. Their role is to limit La Banque Postale's loss in the event of a borrower default (LGD). The guarantees taken must comply with the risk management rules and, insofar as possible, security rights must qualify in prudential terms;
- export credit, customer loans (SFIL scope): the main providers of personal surety (guarantees) are sovereign institutions and local authorities.

Guarantees for market activities cover either the issuer risk or the counterparty risk:

- issuer risk (Caisse des Dépôts Central Sector scope): issuer, issue or transaction guarantees are recorded in the IT systems and used to calculate the credit risk exposure for the guarantors in question;
- counterparty risk: the Caisse des Dépôts Group is exposed to potential counterparty risk on its over-the-counter market transactions. The Group manages this risk through the systematic use of standard contractual arrangements requiring counterparties to put up collateral or to offset trades. For credit risk for its market activities, La Banque Postale group's standard requires securities borrowed or received as part of repo transactions to be accounted for as collateral in accordance with TARC principles when the following eligibility criteria are met: sufficiently liquid assets included in the list of CRR assets (art. 194.3); right to liquidate (art. 194.4) and match between the credit quality score (CQS) and the assessments of the external organisation (art. 197.1).

If the transactions are eligible, the Group clears the derivatives through clearing houses.

The Caisse des Dépôts Group does not use securitisation techniques to attenuate its risk exposures.

2.7.3.1.2.3 Credit risk monitoring (Watchlist and identification of non-performing exposures)

The governance and oversight of the Caisse des Dépôts Group's risks are underpinned by a group of committees, specific to the Caisse des Dépôts Central Sector and its subsidiaries, which enable them to comply – from the highest levels of responsibility down – with the applicable laws and regulations, and to ensure that all risks are managed in a healthy and independent manner. Each entity has committees for:

Risk monitoring:

- Counterparty Risk Committee or Counterparty Watchlist and Defaults Committee for the Caisse des Dépôts Central Sector;
- Watchlist Committees for SFIL;
- Watchlist Committee and Group Provisions Committee for La Banque Postale.

These committees monitor any assets that require special surveillance due to a deterioration in their credit risk.

Default monitoring and identification:

- Counterparty Watchlist and Defaults Committee and Provisions Committee for the Caisse des Dépôts Central Sector;
- Customer Vision Watchlist Committees and Disputes Committees for La Banque Postale;
- Defaults, NPE and Forbearance Committee and Provisions Committee for SFIL.

One of the key roles of these committees is to decide whether to apply or remove default status from borrowers, classify non-payments as a true default or technical non-payment, approve the list of counterparties with non-performing exposures and approve the list of restructured exposures.

2.7.3.1.2.4 Credit risk provisions

Impairment is calculated using IFRS 9.

Significant increase in credit risk

Group principles

The Caisse des Dépôts Group has defined seven principles for assessing a significant increase in credit risk, one of which is specific to retail customers and is applicable only to La Banque Postale.

Principle 1 – Monitoring of credit risk: in accordance with IFRS 9, credit quality is assessed from the beginning of the commitment. Credit quality is measured at each reporting date after initial recognition in order to determine the classification of the asset concerned.

A financial instrument is classified as sensitive when there has been a significant deterioration in credit quality since initial recognition (comparison of the asset's credit quality versus when it was first recorded in the balance sheet or recognised as an off-balance sheet commitment).

Principle 2 – Rating indicator to monitor credit quality: the Group monitors the credit risk of each contract using a system for rating the credit quality of the counterparty. The rating of a contract at a given time is determined on the basis of the counterparty's rating at that time.

The Group's entities have a rating system derived from the internal rating models used to manage and monitor risks.

If no internal or external rating is available for a given customer and the related exposure, other methods are used to assess whether there has been a significant increase in credit risk since inception. For portfolios that do have an internal or external rating, assessment of a possible significant increase in credit risk is based on the rating, supplemented where appropriate by quantitative and/or qualitative analyses by the entity's Risk Management division.

Principle 3 – Monitoring of credit quality with the addition of a backstop: to supplement Principle 1, the Group's entities may use an absolute threshold criterion based on payments that are more than 30 days past due. In accordance with IFRS 9, payments more than 30 days past due are considered as an indicator of a significant increase in credit risk as they point to a decline in credit quality. La Banque Postale and SFIL also use a rating indicator to take into consideration an absolute quality level beyond which there is considered to be a significant increase in the assets' credit risk. The level is set by customer segment and/or type of asset.

Principle 4 – Use by La Banque Postale of a 12-month indicator for retail customers: assessment of a significant increase in credit risk, which involves assessing at each reporting date the probability of a default occurring over the remaining life of the asset. Rather than basing the assessment on the lifetime probability of default, IFRS 9 allows the use of a 12-month probability of default if this is a reasonable approximation of the lifetime probability and supported by adequate documentation.

Principle 5 – Application of the low credit risk exemption: IFRS 9 allows entities to assume the low credit risk concept at the reporting date. A financial instrument is considered to represent a low credit risk when there has been no significant increase in its credit risk since initial recognition. “Low credit risk” can be equivalent to a widely accepted definition such as “investment grade”, which according to the CRR scale would correspond to a rating below or equal to 3.

Principle 6 – Consideration of qualitative information: for the Group’s portfolios, excluding La Banque Postale retail customers, the presumption of a transfer to Stage 2 may be subject to a specific qualitative analysis by the Watchlist or Monitoring Committee to confirm or reject the assessment that a significant increase in credit risk has occurred.

Principle 7 – Transfer to Stage 2 before default: wherever possible, assets exposed to a significant increase in credit risk are identified before they default. Exceptionally, some commitments can be exempted from being reclassified to Stage 2 before they are recorded in default.

Process for assessing a significant increase in credit risk

The operational procedures in place enable events indicating a possible deterioration in the credit quality of a counterparty to be monitored/detected.

The criteria for classifying a commitment in Stage 2 are described by category of exposure:

- customer portfolios (Caisse des Dépôts Central Sector scope);
- sovereign debt and equivalent, central administrations and central banks;
- financial institutions, credit institutions;
- corporate debt;
- corporates (La Banque Postale scope);
- retail customers – individuals (La Banque Postale scope);
- retail customers – businesses (La Banque Postale scope);
- public sector entities (La Banque Postale and SFIL scope).

The main criteria used to place the contracts of a counterparty in Stage 2 if not yet eligible for Stage 3 are as follows:

- counterparty placed on the Watchlist by an Asset Monitoring Committee due to a deterioration in credit risk or placed in forbearance following a concession made by the entity in question to a counterparty in financial difficulty;
- counterparty with instalments that are between 31 and 89 days past due;
- counterparty whose rating falls below the absolute level considered to be representative of a severely weakened situation.

These criteria do not represent an exhaustive list and the relevance of the information depends on the category of exposure concerned. Other events leading to a deterioration in credit quality or generating risk can be taken into account following an analysis by the Risk Management division of the entity concerned, in conjunction with the operating divisions responsible for monitoring their customers.

The operating divisions are responsible for the exposures they have generated and must detect immediately any events that indicate a deterioration in the credit quality of their customers.

All assets that are not in Stage 3 or Stage 2 are classified in Stage 1. These are assets that show no significant increase in credit risk since initial recognition.

An asset moved to Stage 2 following a significant increase in credit risk may be moved out of Stage 2 and reclassified in Stage 1 if all the criteria that led to this classification are no longer met and any arrears have been settled. Depending on the circumstances, an observation period (the exact duration of which is to be defined by the entities in accordance with their own procedures) may be required for vulnerable debtors to prevent recurrence.

Credit-impaired loans in Stage 3

IFRS 9 does not provide any definition of default, but it encourages the use of a definition that is consistent with the one used by the entity for the purpose of its risk management policy. The Group applies the definition of default set by article 178 of Regulation (EU) No. 575/2013 and the provisions of Regulation (EU) No. 2018/1845 of the European Central Bank in relation to the threshold for assessing the materiality of credit obligations past due. The definition of defaulted loans is therefore clarified by the introduction of a relative threshold and an absolute threshold to be applied to payments past due for the purpose of identifying situations of default, by clarifying the criteria for reclassifying loans as performing after a probationary period, and introducing explicit criteria for classifying restructured loans as defaulted loans.

In addition to identifying defaulted loans on the basis of regulatory criteria applicable to payments past due, a financial asset is considered to be credit-impaired when one or several credit events have occurred that are indicative of financial difficulties:

- risk of non-payment (unlikely to pay): it is unlikely that the counterparty will pay all or part of its debt without recourse to actions such as realising security;
- the loan is considered high-risk under the Group’s risk management policy;
- an application for relief from excessive levels of consumer debt has been made to the Banque de France, even if no payment incident has occurred (La Banque Postale scope);
- etc.

Removal from “default” status is subject to a probationary period, which may be no shorter than the period defined by the applicable regulations.

Impairment – methodological approach – expected credit losses (ECLs)

Expected credit losses

Expected credit losses (ECLs) are measured in a way that reflects an unbiased and probability-weighted amount determined by evaluating a range of possible outcomes, the time value of money and all available information.

12-month expected credit loss (ECL_{12 months})

At each reporting date, when there is no significant increase in the credit risk associated with a commitment since initial recognition, the provision is measured at an amount equal to the 12-month expected credit loss.

ECL_{12 months} represents the portion of the lifetime cash shortfalls that will result if a default occurs in the 12 months after the reporting date.

This formula applies to all commitments classified in Stage 1.

**Lifetime expected credit loss (ECL_{lifetime})**

At each reporting date, when there is a significant increase in credit risk associated with a commitment since initial recognition, the provision is measured at an amount equal to the lifetime expected credit loss.

This formula applies to all commitments in Stages 2 or 3.

Definition of ECL calculation parameters

Expected credit losses are calculated using three main components: probability of default (PD), loss given default (LGD) and exposure at default (EAD). For contracts in Stage 2, the maturity of the exposure must also be taken into account.

Probability of default (PD): IFRS 9 introduces the notion of expected credit losses and, indirectly, that of the probability of default adjusted to the situation at the reporting date (point-in-time probability of default – PiT PD). This parameter does not correspond to the average over the cycle (through-the-cycle probability of default – TTC PD) applicable under the Basel framework for the internal ratings-based approach. This variable is used to estimate the probability that a commitment will go into default over a given period of time. A PiT PD estimate is based on future and current assessments and depends on the counterparty category.

PiT PD is used for all the Group's portfolios, excluding the Caisse des Dépôts Central Sector's customer portfolios, which are subject to specific treatment, based on the historical average of defaults.

Loss given default (LGD): the ratio between contractual and expected cash flows taking into account the effects of discounting and other expenses incurred at the time that an instrument goes into default. LGD is expressed as a percentage of exposure at default.

This input under IFRS 9 differs from the Basel definition. For Basel II purposes, loss given default is adjusted to include a prudential buffer and to reflect losses occurring during a downturn in the business cycle and other effects.

As the Caisse des Dépôts Central Sector's portfolios do not have internal loss given default models, LGD is established by experts, based either on observed historical collections (customer portfolios) or on the levels generally used under the Basel standard (securities portfolios).

La Banque Postale has opted to use modelled LGDs adjusted in accordance with IFRS 9 for portfolios that have a loss given default model by type of product and guarantee, and to determine an LGD based on expert analyses for the other portfolios by segment, product and type of guarantee.

SFIL uses a new IFRS 9-compliant LGD model for its largest local authority portfolio, i.e., that of municipalities and inter-municipal associations with their own tax status. For other types of local authority, it continues to use the LGDs modelled in the prudential framework (adjusted in accordance with IFRS 9) for relevant portfolios. For other counterparty categories, SFIL has defined an LGD validated by experts.

Exposure at default (EAD): the basis for calculating the expected credit loss. It is based on the value exposed to credit risk taking into account the type of repayment schedule, the passage of time and expected early repayments (projected cash flows).

The loss allowance is based on the outstanding amount recorded on-balance sheet and off-balance sheet (undrawn portion) converted to its credit exposure equivalent using the credit conversion factor (CCF).

Maturity refers to the final payment date for a loan commitment or a financial instrument on which the principal and interest must be settled in full or the date when the authorised amount or authorisation period expires.

It corresponds to the maximum contractual period including extension options, except in the case of revolving lines of credit, renewable credit card facilities and overdrafts for which a behaviour-based maturity is to be used (La Banque Postale scope).

For commitments within the scope of La Banque Postale without a contractual maturity, a 12-month maximum maturity is used as, in the case of insolvency of the debtor, the overdraft facility is cancelled within 12 months, in accordance with French banking law. Revolving lines of credit are financial instruments that do not have a fixed maturity, repayment schedule or cancellation period. The maturity taken into account for these instruments depends on their lifetime estimated by La Banque Postale, which can be greater than the duration of the contractual commitment. The maturity used is based on observed behaviours.

Forward looking

In accordance with IFRS 9, expected credit losses take into account the effects of future economic conditions through the use of forward-looking data models and informed judgement. Macroeconomic rules apply to all the entities of the Caisse des Dépôts Group, but each entity is responsible for rolling them out to each of their exposure segments in order to reflect the future risk as accurately as possible. Some segments require the Group scenarios to be supplemented with *ad hoc* variables due to their specific nature, such as SFIL for its exposure to French local authorities, for which the forward-looking models used are designed to forecast the main variables likely to affect local authorities' accounts (tax bases, French State payments, investment trends, etc.).

The macroeconomic framework used within the Group is based on four scenarios: a central scenario, two adverse scenarios (the use of which is at Group entities' discretion) and an upside scenario. They are defined by the Economic Research departments at Caisse des Dépôts and La Banque Postale. Five-year economic projections are used, with the following principles:

- consistent global scenarios are applied across all exposure segments with potentially opposite impacts on certain counterparty segments, to reflect the diversification of the portfolio;
- the proposed scenarios are not stress scenarios; the aim is not to use IFRS 9 scenarios to quantify the risk of losses in a highly adverse environment that are very unlikely to occur in light of the prevailing macroeconomic situation at the estimation date, but rather to develop generally plausible scenarios whose probability of occurrence is within one standard deviation of the occurrence of the central scenario;
- the scenarios used are generally the same as those used in the Public Institution's other corporate processes (multi-annual financial planning process, etc.) to ensure a high degree of overall consistency in financial management and strong consolidation capabilities at the Group level.

These scenarios are documented and contain projections for all the macroeconomic variables needed to run the models developed to obtain lifetime PDs.

The system uses a significant number of models, allowing each Group entity to assess as accurately as possible the risks specific to its portfolios. All of the models used for IFRS 9 purposes are subject to an independent review by the Model Validation team of the entity concerned and are formally validated (Model Validation Committee, Audit division, etc.) before use.

For 2025, the Caisse des Dépôts Group used the following scenarios to calculate impairment under IFRS 9:

Central scenario

The central growth scenario includes growth of 0.7% by the end of 2025. For 2026, the lack of visibility as to the contents of the Finance Act and Social Security Finance Act supports the caution already built into the previous projections, with a forecast of 0.8%, slightly below the market consensus of 0.9%/1.0%.

Prices continued to decline at a faster rate than was expected at the start of the year due to the sharp fall in energy prices and the appreciation of the euro. Although there are still points of concern (inflation inertia in services, high energy price baseline, political and geopolitical uncertainties), it is estimated that total annual average inflation in 2025 was lower than expected in the last forecast, at 1.1%. For 2026, uncertainty is very high and the forecast has also been revised downwards, to an annual average of 1.5%.

With regard to the ECB deposit rate, monetary normalisation at the beginning of 2025 before an extended period of unchanged policy rates, together with the latest developments, confirm the prospect of the deposit rate ending the year at 2.00%, representing 200 basis points of rate cuts over 2024/2025. Given the prevailing inflationary forces in the coming medium- to long-term economic cycle, the long-term equilibrium rate was maintained at 2.25% and is now projected to be reached one year earlier than in the previous forecasts.

Concerning long-term rates, in the short term, the forces keeping the 10-year OAT rate at around 3.5% are expected to remain strong, particularly given the pressure on France's sovereign risk premium and the expected increase in calls on the market following the lifting of the German debt brake. The forecast ten-year OAT rate has been revised slightly upwards compared with the January forecast. In the longer term, the decision to raise the equilibrium rate for previous forecasting exercises remains a central question, particularly given that inflation and short-term interest rates are structurally higher than in the past. The updated forecast includes a further increase in the long-term equilibrium rate, from 3.1% to 3.4%.

With regard to interest rates, the geopolitical environment and resulting uncertainties make impacts difficult to quantify. Our forecasts assume that the Federal Reserve's policy rates will fall by less than initially expected, and that the upward pressure on US long-term rates will have a knock-on effect on European rates.

This scenario and the projections for its main metrics are presented below:

Central scenario variables	2026	2027	2028	2029	2030
French GDP	0.8	0.9	1.0	1.0	1.0

Downside and upside scenarios

- **Downside scenario based on an L-shaped recovery:** the downside scenario based on an L-shaped recovery is designed to stress the Group's financial activities. It includes a recessionary shock to GDP (health, geopolitical, financial or economic crisis), with a sharp fall in stock markets and interest

rates in the year of the shock. Global potential growth is weakened after the crisis for an extended period, curbing economic recovery, such that the rally in equity markets would be limited and interest rates would remain structurally low. This scenario and the projections for its main metrics are presented below: La Banque Postale does not use this scenario.

L-shaped scenario variables	2026	2027	2028	2029	2030
French GDP	(1.5)	0.0	0.5	0.5	0.5
Unemployment rate (mainland France)	8.7	9.2	9.5	9.6	9.6

- **This downside scenario** combining a steep fall in the bond market and an inflationary shock includes, for the year of the shock, new pressure on commodity prices due to geopolitical tensions, leading to severe recessionary pressures on global GDP. A persistent spiral of price and wage increases would take hold in the eurozone, leading to a rise in core inflation, with headline inflation remaining above central bank targets. The

central banks would respond by setting their key rates above neutral, without managing to stabilise price momentum, leading to very high bond yields. Under this scenario, the ecological and energy transition would be more disorganised than under the central scenario, contributing to pressure on prices and interest rates, and a loss of potential growth in the medium term (loss of productivity).

The scenario and the projections for its main metrics are presented below:

Bond crash scenario variables	2026	2027	2028	2029	2030
French GDP	(1.5)	0.0	0.5	0.5	0.5

- **Upside scenario:** this scenario assumes that uncertainty will ease in France and the international environment will become more buoyant. In France, consumer and business confidence would be less oppressed than expected, providing more support for a recovery in economic activity during the first few years than in the central scenario. At international level, the increase in US customs tariffs would be controlled. US inflation would continue to ease, allowing the Fed to cut its Fed Funds rate, with a knock-on effect on US long-term rates. The phenomenon would spread to the major economies and

European long-term rates (including the OAT) would also fall. This latter factor would also play a role in the long term. Increased US oil production would weigh on oil prices, offsetting the upward pressure on French inflation from stronger economic activity. In China, the government's support policies would deliver a few benefits. All of these phenomena (less uncertainty, increased foreign demand, controlled inflation and lower interest rates) would be additional factors supporting French growth compared with the central scenario. This would lead to a more dynamic jobs market and reduce unemployment.

Upside scenario variables	2026	2027	2028	2029	2030

SFIL scenarios

Based on the Group scenarios, SFIL uses scenarios that are specifically adapted to the local authorities sector, designed to forecast the macroeconomic impacts and decisions taken in the French Finance Acts on changes in tax receipts, income from services and other revenue, French State payments and planned investment expenditure. It uses three scenarios:

- a central scenario that takes into account global indexation assumptions for the main operating and investment income and expense items, as well as the elements of the 2026 French Social Security Finance Act (LFSS). In terms of investments, the scenario takes into account the effects of the electoral cycle, as well as projected needs linked to the climate challenges facing local authorities, in terms of the risks of transition to a low-carbon economy and physical risks;
- an optimistic scenario which differs from the central scenario through more favourable macroeconomic assumptions (changes in GDP, inflation and unemployment) and the indexation of certain budget items:
 - indexation of French State subsidies at 50% of inflation (versus a freeze on French State subsidies in the central scenario),
 - slightly more moderate growth in personnel costs,
 - a reduced level of capital expenditure compared to the central scenario;
- a pessimistic scenario based on macroeconomic assumptions under CDC's downside scenario, with a recession in 2026, high inflation and a rise in unemployment. Tax revenues and income from services are indexed to inflation at 100%, but operating revenues are affected by the continuation of the DILICO mandatory levy in 2027 and 2028. The scenario also assumes a freeze on investments in value terms, owing to the decline in savings, as well as a postponement of climate-related investments.

Changes in the macroeconomic indicators corresponding to these three scenarios are presented below:

Central scenario variables	CDC central scenario (November 2025)		
	2026	2027	2028
Inflation	1.5	1.8	1.9
GDP growth	0.8	0.9	1.0
Unemployment	7.5	7.6	7.6
Local Public Sector interest rate ⁽¹⁾	2.9	3.0	3.2
10-year OAT	3.6	3.5	3.4

(1) Calculation based on the 10-year OAT.

Upside scenario variables	LBP optimistic scenario (November 2025)		
	2026	2027	2028
Inflation	1.4	1.6	1.7
GDP growth	1.2	1.5	1.4
Unemployment	7.4	7.2	7.1
Local Public Sector interest rate ⁽¹⁾	2.8	3.0	3.1
10-year OAT	3.4	3.3	3.2

(1) Calculation based on the 10-year OAT.

Downside scenario variables ⁽²⁾	CDC worst-case scenario		
	2025	2026	2027
Inflation	5.5	4.0	3.5
GDP growth	(1.5)	0.0	0.5
Unemployment	8.7	9.2	9.5
Local Public Sector interest rate ⁽¹⁾	3.6	3.8	4.1
10-year OAT	6.0	5.5	5.5

(1) Calculation based on the 10-year OAT.

(2) The forward-looking scenarios used in 2025 were developed on the basis of the Group's macroeconomic assumptions available in September 2024.

**Summary of scenarios used by Group entities**

The probability of occurrence for each of the scenarios used by the Group's entities is summarised in the table below. The weighting of SFIL's scenarios in the table concerns the SPL France portfolio, which represents the majority of the loan book:

Scenarios	2026-2030			2025-2029 (Y-1)		
	Caisse des Dépôts Central Sector	La Banque Postale	SFIL ⁽¹⁾	Caisse des Dépôts Central Sector	La Banque Postale	SFIL ⁽¹⁾
Central	60%	60%	N/A	60%	60%	N/A
L-shaped alternative	5%	N/A	N/A	5%	N/A	N/A
Bond crash	20%	30%	N/A	20%	30%	N/A
Upside	15%	10%	N/A	15%	10%	N/A
Central (SFIL)	N/A	N/A	60%	N/A	N/A	55%
Downside (SFIL)	N/A	N/A	25%	N/A	N/A	30%
Upside (SFIL)	N/A	N/A	15%	N/A	N/A	15%

(1) SFIL's forward-looking scenarios apply to French local authorities (excluding public hospitals), which account for the majority of outstanding amounts, but also to the banks and sovereign issuers in their portfolios.

Use of the new macroeconomic scenarios and their new weighting did not materially change the probability of default for the Caisse des Dépôts Central Sector scope. Ultimately, there is almost no impact on ECLs, with changes being due to fluctuations in exposure at default (EAD) and modifications in individual profiles (ratings, change in buckets, or Stages).

For the Caisse des Dépôts Central Sector IFRS 9 scope, the sensitivity of ECLs to the weightings of the macroeconomic scenarios is measured by calculating the maximum deviation between ECLs computed under the various scenarios weighted at 100% and the weighted ECL. This deviation ranges from [-11% to +32%].

In the case of SFIL, the maximum deviation of the ECLs computed under the various scenarios weighted at 100% and the weighted ECL is between [-6% and +10%].

La Banque Postale: sensitivity analysis of expected losses to macroeconomic scenarios

Analyses were conducted to gauge the sensitivity of statistical ECLs (i.e., excluding loss allowances for corporate customers based on expert judgement) to credit risk on corporate customer scopes.

The sensitivity of retail ECLs is relatively moderate in this segment, ranging from [0% to +3%] of ECL based on the central scenario, depending on the scenario and before weighting.

The sensitivity of ECLs to corporate customers is more pronounced in this segment, ranging from [-3% to +52%] of ECL based on the central scenario, depending on the scenario and before weighting.

Change in credit risk

In 2025, the risk management divisions of the Caisse des Dépôts Group entities continued their work to determine a cost of risk reflecting the actual risk on their customer loan and debt security portfolios.

Their work consisted of applying the current procedures for identifying significant deteriorations in risk (IFRS 9 Stage classification rules) and performing specific assessments of the potential impacts of changes in the macroeconomic environment (inflation, interest rate hikes, growth, etc.).

Based on this work, the impacts on the credit risk assessment for the Caisse des Dépôts Group can be divided into two major categories:

- the general impact of updating macroeconomic scenarios and incorporating them into the associated statistical provision models;
- individual or industry-specific impacts, determined based on an analytical review of customer and securities portfolios.

The impact of climate risks on the ECLs of the Caisse des Dépôts Central Sector is mainly captured through the rating systems used, in particular the rating adjustment ("override") capabilities designed to take into account the transition and/or physical vulnerability risks to which counterparties are exposed. This case-by-case approach is validated during the rating reviews.

SFIL also includes an investment assumption related to the implementation of France's national low-carbon strategy and to measures aimed at mitigating climate change physical risks in their IFRS 9 forward-looking scenario for their "municipalities and inter-municipal associations with their own tax status" portfolio.

Since 2024, La Banque Postale added climate risks to the risks covered by provisions. While the general dimension was already reflected in the downside scenarios, a specific dimension was added for the Retail Banking business's home loan portfolios and for corporate loans.

In addition to existing sector-specific provisions, climate risk provisions are now defined for the two main portfolios:

- Corporate portfolio: provisions for transition risk based primarily on the estimated impact of higher carbon prices on the counterparties' solvency;
- Retail home loan portfolio: provisions for physical flood risk and the impact this may have on expected recoveries of loans subject to legal collection procedures.

Incorporating climate risks into the cost of risk is based on two complementary dimensions:

- **General dimension**

This dimension is an integral part of the development of macroeconomic scenarios for emerging risks in the broadest sense (climate, geopolitical, etc.). As the core dimension cutting across the entire economy, it enables account to be taken of the impacts of transition risks on the macroeconomic indicators that affect the solvency of economic actors. It is therefore a systemic dimension which cannot be considered separately from other macroeconomic factors such as inflation, interest rate trends, geopolitical crises, etc., and consequently applies to all economic actors;

- **Specific dimension**

This is the dimension that is specific to each customer segment and customer business. It enables account to be taken of the sensitivity to climate risks of each segment or customer. The specific dimension is determined in addition to the general dimension and can be applied at different levels depending on the risks being estimated (at the level of counterparties, business sectors, products, etc.).

Calculating the provisions is a complex task which, in some cases, requires the creation of databases for the reporting of observed climate hazards, in order to integrate this component in the Expected Credit Loss (ECL) calculation.

As regards the general measures for adjusting statistical provisions, the probability of default models used when calculating the IFRS 9 provisions took full account of the likely developments in key economic indicators, and all models were recalibrated in order to incorporate the new macroeconomic scenarios described above.

Customer portfolios

The sharp interest rate hikes over recent years have led to a paradigm shift, with financing issues returning to the fore.

While the Caisse des Dépôts Group does not expect a massive deterioration in the risk profile of its customer portfolios, but rather a return to long-term average loss ratios, the development of non-performing exposures needs to be closely monitored.

For La Banque Postale, cost of credit risk amounted to €250 million at 31 December 2025.

- **Corporate customers**

During 2025, no major losses were recorded on the corporate loan portfolio. However, the number of corporate loans subject to special measures continued to increase. The main indicator of a gradual decline in credit quality was the transfer to the “watchlist” or to special measures of several loans with significant real estate exposure and loans to SMEs/mid-caps. Increases in sector-specific provisions in the second half of 2024 absorbed the expected growing exposure to credit risks in the real estate sector.

Corporate and Investment Banking cost of risk amounted to €117.5 million at 31 December 2025, compared to €132 million at end-2024.

- **Retail customers**

The Corporate and Investment Banking cost of risk amounted to €131.9 million in 2025 (of which €7.4 million corresponded to professional customers) against €99 million in 2024.

There were no major changes in the retail loan book’s credit quality, which remained under control throughout the year, especially for home loans.

Concerning consumer loans, the decline in credit quality observed since summer 2024 (illustrated by rising arrears, growth in the number of overindebted borrowers seeking Banque de France protection and the increased incidence of credit score downgrades) continued in 2025.

For both types of customer, the options adopted for the 2025 accounts close include a review of statistical provisioning parameters and an update of collective provisioning. Adjustments have been made to the level of individual provisions for corporate customers.

- **Legal professions (Caisse des Dépôts Central Sector scope):** expected credit losses in Stage 2 remain insignificant (€2 million) for this customer segment, which historically has a very low loss ratio. Activity reported by notaries is closely correlated to housing market transactions, which continued to decline in 2024. This trend was in line with expectations, given the inflationary pressures and the rising mortgage rates. Nonetheless, the demographic impact combined with the interest rate trajectory enabled the market to stage a moderate recovery in 2025.

- **French local authorities (SFIL scope):** according to provisional data from the Directorate General for Public Finances (DGFIP), the gross savings of local authorities (municipalities and intermunicipal associations with their own tax status, departments and regions), excluding groups without their own tax status and excluding ancillary budgets, rebounded sharply in 2025 (up 21.5%), making it possible to offset the decline seen in 2024 and therefore to record savings slightly higher than those in 2023. This growth in savings was seen at each level of local government.

Local authorities’ net cash balances fell overall (down 3.7%), with all types of local government reporting a decline except departments.

In 2024, public healthcare institutions’ finances worsened, with 61% of institutions reporting a loss, compared with 56% in 2023. As in previous years, the decline in net profit in 2024 is attributable to the deterioration in the operating cycle.

Outstanding debt (€29.9 million) was down for the third year running, but the decrease was smaller than in 2023. However, debt servicing capacity continues to deteriorate sharply, rising from 10.6 years in 2022 to 16.8 years in 2023 and 26.4 years in 2024.

- **Export credit (SFIL scope):** changes in cost of risk mainly reflect revised internal ratings, transfers to and from the watchlist and the amortisation of outstanding debt. Cost of risk remains low on account of the guarantee obtained from BPIAE on all financing granted.

Securities portfolios (Caisse des Dépôts Central Sector scope)

The cost of credit risk for 2025 reflected:

- the portfolio exposure oversight procedure;
- specific decisions to downgrade internal ratings or include exposures on the Watchlist (resulting in classification in Stage 2) following reviews of financial analyses;
- the update of the macroeconomic scenarios in 2025 (see forward-looking inputs), which enabled the probabilities of default to be adapted to the reality of the cycle.

Reviews carried out in 2025 showed that the portfolio's counterparties were extremely resilient.

Thanks to the overall resilience of internal bond issuer ratings, the breakdown of counterparties between Stage 1 and Stage 2 did not change significantly over the year; at 31 December 2025, ECLs in Stage 2 were particularly low at €4 million.

Changes in management practices

The Caisse des Dépôts Group generally left its management procedures and rules for both commitment decisions and portfolio monitoring unchanged.

For the Caisse des Dépôts Central Sector and SFIL, no material changes or adjustments were made to the rating or provisioning models, and no changes were made to the back-testing procedures used in the ongoing assessment of the models' robustness.

In 2025, La Banque Postale group's Risk Management division incorporated into the provisioning process the various adjustments mentioned above and also in La Banque Postale's financial report.

2.7.3.1.3 Group exposure to credit risk (excluding sovereign debt)

2.7.3.1.3.1 Maximum exposure to credit risk, including risk mitigation and hedging measures after impairment

Maximum exposure to credit risk corresponds to the carrying amount of loans and receivables, debt instruments and derivative financial instruments, after the effect of any netting agreements and impairment losses.

2.7.3.1.3.2 Concentration risk

Concentration risk is defined in article 8 of Decree No. 2020-94 of 5 February 2020 as the risk arising from exposure to a single counterparty, including central counterparties, to several counterparties considered to be a single group of related customers, or to counterparties operating in the same economic sector or region, or from granting credit to the same sector of activity, or from applying credit risk reduction techniques, especially sureties issued by a single issuer.

Each Group entity manages its own concentration risk in accordance with its risk framework, in line with the concentration indicators monitored at Group level, namely:

- nominal concentration: defined as the risk of an increase in the default or impairment risk on a portfolio due to a large amount from a single counterparty or several counterparties from the same group;
- sector concentration: defined as the risk of an increase in the default or impairment risk on a portfolio due to lack of sector diversification in that portfolio, in the event of a specific event

affecting a given sector and simultaneously impacting the activity of several counterparties. This can trigger several defaults or impairment losses for associated counterparties due to their involvement in or sensitivity to a given sector;

- geographic concentration: defined as the risk of an increase in the default or impairment risk on a portfolio due to lack of geographic diversification in that portfolio, in the event of a specific event affecting a given geographic area and simultaneously impacting the activity of several counterparties. This can trigger several defaults or impairment losses for associated counterparties due to their involvement in or sensitivity to a given region.

Aware of the importance of concentration risk, the Group has introduced monitoring and reporting procedures for nominal, sector and geographic concentration, which notably break down exposures by credit quality (financial rating). In order to contain concentration risks, the Group has set warning thresholds and limits to ensure its exposures remain consistent and appropriate for the amount of equity.

Movements during the period in gross value and impairment

Movements during the period on Stage 1, 2 and 3 exposures and impairment are presented in Notes 2.3.5 “Loans and receivables due from credit institutions and related entities at amortised cost”, and 2.3.6 “Loans and receivables due from customers at amortised cost”.

2.7.3.1.4 Exposure to credit risk on sovereign debt – Breakdown of the sovereign portfolio by country

Sovereign debt comprises all loans, receivables, debt securities and off-balance sheet commitments given for which the counterparty is a given country, i.e., a national government or one of its agencies

(including regional governments or local authorities and public sector entities as defined by the European Banking Authority (EBA) in articles 115 and 116 of the Capital Requirements Regulation).

The net direct exposures shown below correspond to all such amounts carried on the balance sheet (marked to market and less any impairment losses).

Indirect exposures correspond to amounts recognised as financing and guarantee commitments given to sovereign counterparties within the meaning of IFRS 9.

This table excludes exposures to non-sovereign counterparties that are otherwise fully or partially guaranteed by a sovereign.

2.7.3.2 Market risks

2.7.3.2.1 Definitions and scope

Market risk is defined as the risk of loss (whether recorded in the income statement or directly in equity) resulting from fluctuations in the prices of the financial instruments held in a given portfolio.

The Caisse des Dépôts Group is exposed to market risks mainly through three portfolios:

- La Banque Postale exposures recognised at fair value and including its trading book within the regulatory meaning, as well as assets in the banking and insurance portfolio recognised at fair value through profit and loss or through other comprehensive income;
- a variable-income securities portfolio mainly managed by the Caisse des Dépôts Central Sector;
- certain positions or activities in the SFIL banking portfolio that, despite not presenting any market risk in the regulatory meaning of the term, are recognised at fair value through profit and loss or through other comprehensive income. They are mainly assets that do not meet the SPPI criteria.

2.7.3.2.2 Market risk governance and management

2.7.3.2.2.1 Market risk indicators

The risk management divisions of the Group's entities are responsible for monitoring market risk, mainly using one or more of the following indicators.

Sensitivities

Sensitivities are used to measure the exposure of the Group's portfolios to fluctuations in risk factors. The risk management divisions validate the method for calculating sensitivities and ensure that all risk factors identified as relevant and material have been taken into account.

Value at Risk (VaR)

VaR is an indicator of loss exposure that gives an estimate of the maximum potential losses over a specified period with a given probability. Each Group entity calibrates its VaR models in order to encompass the risks inherent to their portfolios as accurately as possible. They apply a certain number of shared principles, such as use of a prudent confidence interval (1-day 99% VaR for trading portfolios, 1-day or 1-month 99% VaR for other portfolios) and the application of higher weightings to recent market movements.

The risk management divisions back-test the results of the model used to calculate the VaR, in order to assess its robustness.

Stress scenarios

VaR is estimated under current market conditions and does not provide any information on the amount of the potential loss in extreme and targeted market conditions (geopolitical shock, bankruptcy of a systemically important group, pandemic, etc.). That is why stress scenarios are defined. A distinction is made between two major stress families:

- historical stresses based on past financial crises;
- hypothetical stresses determined using changes that are considered plausible and are calibrated with assumptions based on historical statistics drawn from market data.

2.7.3.2.2.2 Market risk governance: limits and information

Depending on the portfolio in question, the risk indicators are subject to limits or are reported to the governance bodies of the entities concerned. A distinction is made between three levels of limits:

- limits set or metrics provided for information only by the supervisory body of the entity concerned (Caisse des Dépôts' Supervisory Board, La Banque Postale's Supervisory Board and SFIL's Board of Directors) in the Risk Appetite Statement (RAS);
- limits rolled down to each business unit in the entities' central risk management documents (e.g., their Risk Management Policy), and information for the executive bodies (Caisse des Dépôts' Executive Committee via the monthly risk report, La Banque Postale's Management Board and SFIL's Executive Committee and Risk Committee);
- detailed operational limits and compliance reporting to monthly meetings of portfolio management committees (market risk committees for La Banque Postale and SFIL's Risk Committee).

Limit overruns trigger an alert procedure and related corrective actions and the maximum duration of the overrun are assessed by entities' risk management divisions based on the nature of the overrun and the operating and market context.

Detailed information about market risks is provided by La Banque Postale and SFIL in their respective annual financial reports.

2.7.3.2.2.3 Market risk for the equity portfolio of the Caisse des Dépôts Central Sector

The Group Risk Management division performs VaR (SVaR) calculations (1-month 99% VaR) on the equity portfolio, using the Monte Carlo method.

The indicator uses pseudo-Gaussian distribution assumptions with fat-tailed distributions. This provides an accurate estimate of the maximum risk for the chosen holding period and confidence interval under actual market conditions, assuming the Group will continue as a going concern.

The VaR calculation method uses a large number of risk factors and a high-dimension Monte Carlo model that involves choosing from among these risk factors in the light of volatilities and historical correlations. The historical returns used for the Stressed-VaR (SVaR) calculations are spread over a stressed historical window.

The SVaR gives a maximum potential loss in a particularly stressed economic environment.

If the price of an instrument does not vary in line with the primary risk factor – as is the case with options – the calculation tool remeasures it under each of the scenarios using integrated pricing formulas.

Caisse des Dépôts Central Sector's equity portfolio risk can be broken down by industry using the Industry Classification Benchmark (ICB2), which makes it possible to break out marginal SVaR and to analyse the contribution of each industry to overall SVaR.

Equity fund risk is calculated in the local currency, but does not factor in the underlying currency risk, and is then revalued at the equivalent euro amount. In fact, Caisse des Dépôts Central Sector's currency risk is measured for the Group as a whole and not at individual portfolio level.

▼ Caisse des Dépôts Central Sector indicators – 31 December 2025

	Portfolio (in millions of euros)	SVaR (in millions of euros)	SVaR %
Equity portfolio	31,283	8,541	27.30%
International equities	1,564	436	27.89%
Exchange-traded funds	1,606	397	24.69%
CDC Croissance	1,949	463	23.73%

▼ Monthly changes in the Caisse des Dépôts Central Sector's equity portfolio SVaR over a rolling 12-month period

Since the indicator went live in November 2022, the Stressed-VaR has remained in a narrow range around 25%. Increases and decreases are due to changes in the weighting of portfolio positions and sectors over time.

▼ Breakdown of the Caisse des Dépôts Central Sector's equity portfolio SVaR by sector at 31 December 2025

	Weighting in the Stressed-VaR	Weighting in the portfolio

Commodities	0.4%	0.3%

2.7.3.2.2.4 Market risk for La Banque Postale asset portfolios

La Banque Postale is exposed to market risks due to its cash management and surplus liquidity management activities (portfolio of assets available for sale and hedging transactions), and through the transactions undertaken on behalf of customers. The market risk portfolio comprises the trading portfolio, and also banking portfolio transactions measured at fair value, including transactions in available-for-sale securities and certain securities lending and borrowing transactions. The associated risks are assessed using:

- sensitivity, which measures the exposure of La Banque Postale's portfolio to change in risk factors;

- VaR: La Banque Postale uses a parametric VaR, calculated using a variance-covariance matrix that covers La Banque Postale's interest rate, spread, exchange rate, volatility and equity risks. The resulting VaR partly covers option-related risks, with second-degree risks not being taken into account. Although they are not currently material in relation to total positions, an increase in option positions could lead La Banque Postale's Risk department to adopt a more appropriate methodology. Moreover, option risk monitoring indicators are deployed.

La Banque Postale is primarily exposed to interest rate, credit spread and equities risks. Currency risks, particularly related to international mandates and financial activities, along with volatility risks, are moderate.

▼ Trading book VaR

(in millions of euros)

The trading book's VaR averaged €1.78 million over one year, with a peak of €3.21 million. No limits were exceeded.

2.7.3.2.2.5 Market risk for SFIL asset portfolios

As a public development bank, SFIL does not conduct any trading transactions and is therefore not exposed to market risks in the regulatory sense of the term. Similarly, CAFFIL, as a *société de crédit foncier* (mortgage bank), is prohibited from holding trading portfolios or equity investments and is therefore not exposed to regulatory market risk. However, certain positions or activities in the banking book are nonetheless sensitive to the volatility of market parameters and they are monitored as non-regulatory market risks. These are:

- risks arising from fluctuations in the value of the loan book carried at fair value through profit or loss. At 31 December 2025, the fair value of this portfolio was €1.44 billion, compared with €1.68 billion at 31 December 2024. This change includes a

€50 million increase in the credit value of loans, mainly due to the fall in the Iboxx AA index used to estimate credit risk on SPL loans and to a change in the reference curve used for the Iboxx AA;

- changes in fair value adjustments to derivatives including credit valuation adjustments (CVA) and debt valuation adjustments (DVA), recognised in the income statement under IFRS. At 31 December 2025, the CVA was unchanged at a negative €1.5 million, while the DVA increased by €1 million, from €8 million to €9 million;
- the French GAAP provision for marketable securities;
- risks that may affect SFIL's separate financial statements related to the derivatives intermediation activity carried out on behalf of CAFFIL, if the derivatives set up by SFIL with external counterparties are not perfectly replicated with CAFFIL.

2.7.3.3 Structural risks

2.7.3.3.1 Liquidity risk

2.7.3.3.1.1 Definition, scope and governance

Liquidity risk is the risk that a company cannot meet its commitments or cannot unwind or cover a position either because of the market situation or idiosyncratic factors, within a specific period or at a reasonable cost.

Liquidity risk is managed under the framework established by article 2 of Decree No. 2020-94 of 5 February 2020, as amended by Decree No. 2025-876 which enacts Capital Requirements Regulation 3 (CRR3) measures. There is no liquidity pool at Group level.

Group governance

Common principles for all Caisse des Dépôts Group entities are set out in the Group's financial risk management policy. First, the policy underlines the fact that there is no liquidity pool at CDC Group level. Each entity is therefore responsible for managing its own liquidity and financing.

Given its mission of supporting the country's economic development and its role as a trusted third-party manager, the Group's liquidity policy is designed to protect its financing capacity in the long term in all market conditions. As a shareholder, Caisse des Dépôts ensures that its subsidiaries apply a prudent liquidity policy that reflects the Group's objectives, their own objectives and their autonomous management.

Each entity is therefore required to have a documented liquidity policy setting out in risk terms its approach to the Caisse des Dépôts' liquidity policy. The policy should be reviewed at least once a year by the Entity's governance body.

The policy should cover the following main points:

- liquidity governance at the entity;
- indicators and their limits;
- operational roll-down of the liquidity policy;
- stress tests and contingency procedures.

Regulated entities have a set of procedural documents that set out their liquidity risks, the liquidity risk indicators and their limits. Each entity asks its governance bodies to validate its financing plan at least once per year, specifying the nature of the target funding and the value of its issuance programmes.

Entities have IT systems for monitoring liquidity balances and financing transactions, as well as procedures for guaranteeing the diversification of their financing sources. If necessary, the entities document the method used to set limits. The document sets out the rules for dealing with and escalating limit overruns.

2.7.3.3.2 Liquidity risk management and governance

2.7.3.3.2.1 Liquidity management in the Central Sector

Given the importance of managing balance sheet liquidity throughout the Caisse des Dépôts Group, a number of mechanisms have been set up that are designed to:

- match sources to uses of funds as effectively as possible by controlling maturity mismatch risk on the balance sheet and therefore by limiting the need to refinance long-term investments with short-term liabilities (in both euros and foreign currencies);

- maintain conservative amounts of liquid assets to cover upcoming Public Institution repayment obligations;
- limit dependency on market-based financing.

Liquidity is managed in accordance with the prudential model (reference document updated every year), supplemented by the ILAAP (Internal Liquidity Adequacy Assessment Process), which demonstrates the Group's robust mechanism for assessing and managing liquidity. It contains the documentation relating to Caisse des Dépôts' liquidity policy, as well as its operational deployment, governance and risk management.

The prudential model defines a series of indicators for assessing the Central Sector's exposure to liquidity risk, quantifying the overall risk and managing it. These indicators are monitored at monthly and quarterly meetings of the Balance Sheet Management Committee, in order to:

- track the level of resources (statutory and regulated deposits, volume of issues);
- manage the level of the liquidity reserve;
- measure the mismatch between assets and liabilities;
- produce balance sheet projections according to various assumptions;
- measure the Central Sector's resistance to liquidity stress;
- manage the NSFR and LCR regulatory liquidity ratios; and
- more generally, manage short- and medium-term liquidity risk.

In the absence of a liquidity pool at Caisse des Dépôts Group level, these indicators are calculated at entity level and are generally accompanied by management thresholds. The limits and thresholds are reviewed each year and validated by dedicated governance bodies. Under the Central Sector's ILAAP, the contingency plan and associated procedures will be triggered if any of these thresholds is crossed.

Main liquidity risk indicators

Liquidity gaps

Liquidity gaps, which are presented at monthly meetings of the Balance Sheet Management Committee, correspond to the monthly differences in maturities of liabilities and assets measured over the next five years. Gaps are calculated on a static and dynamic basis:

- static gap analysis measures the difference between the natural maturities of liabilities (including deposit maturities) and assets, excluding new lending;
- dynamic gap analysis measures the reinvestment and new lending impacts.

Warning thresholds and limits (based on different time horizons) applied to the static liquidity gap analysis are set in relation to the components of the liquidity reserve.

On average, warning thresholds are around €24 billion and limits around €30 billion.

Maximum liquidity requirements at 31 December 2025 were lower than at end-2024, while maximum liquidity gaps remain well below the Group's trigger threshold or overall risk limit.

Liquidity reserve

The liquidity reserve held by the Central Sector is managed on a daily basis and its level and composition (in particular by regulatory component, type of counterparty and haircut) are reviewed at the monthly meetings of the Balance Sheet Management Committee. The liquidity reserve corresponds to the amount of liquidity likely to be obtained at short notice (a few hours to a few days) even under high-stress conditions. The liquidity reserve is composed of:

- an intraday limit plus a trigger threshold, calibrated to meet intraday liquidity needs;
- a target management level, calibrated to permit the financing, over one month, of the commitments and forecast business volumes set out in the Five-Year Financing Programme without borrowing on the interbank market, taking into account customer deposit runoff assumptions.

At 31 December 2025, the liquidity reserve was higher than at end-2024 and comfortably exceeded the thresholds and limits.

Survival horizon

Liquidity risk management was strengthened in 2023 by the introduction of a survival horizon indicator, calculated quarterly as part of the liquidity stress tests. This new indicator reflects the period during which the Central Sector is able to honour all its financial commitments under a stressed scenario. It measures the Central Sector's resilience to liquidity stress, in line with market practice. The Central Sector's survival horizon remains very comfortable over the Financing Programme's multi-year projection period, under the various stress scenarios.

Regulatory liquidity ratios

In application of France's PACTE Law, the Central Sector has been reporting its LCR and NSFR ratios since the beginning of 2023.

These ratios are significantly above the regulatory minimum of 100% for the LCR and 80% for the NSFR applicable to Caisse des Dépôts.

To support the management of these ratios, estimates are prepared at given dates, along with projections under the three macroeconomic and financial scenarios of the Multi-year Financial Programme, covering five years in the case of the NSFR ratio and one year in the case of the LCR ratio. For the LCR, a static projection is calculated daily with a 90-day horizon.

The system for monitoring liquidity risk indicators has been enhanced by the introduction of a business line monitoring target for the LCR and NSFR ratios.

At 31 December 2025, LCR and NSFR ratios remain at very comfortable levels.

Financing capacity

At 31 December 2025, outstanding long-term issues were up on 31 December 2024, and were established in accordance with the financing plan validated by the Balance Sheet Management Committee.

2.7.3.3.2.2 Liquidity management at La Banque Postale

Liquidity risk reporting and assessment systems

The limits and indicators used to manage liquidity risks refer to the Group's individual business units, notably La Banque Postale, which is the largest Group entity.

The liquidity risk prudential reporting systems cover the entire prudential consolidation scope. Some La Banque Postale group entities are also subject to reporting requirements at the individual level.

La Banque Postale's overall liquidity risk management

La Banque Postale has a strong liquidity position based on:

- an excess of customer deposits over customer loans. La Banque Postale has a significant and diversified deposit base consisting primarily of deposits from French retail customers;
- a large high quality liquidity assets (HQLA) portfolio: La Banque Postale has traditionally invested a significant portion of its balance sheet in sovereign securities due to its historical activity as a deposit-taker. The customer credit business only began to develop in 2006. This portfolio contains only high-quality liquid assets, in accordance with Delegated Regulation (EU) No 2015/61;
- proven access to capital markets and money markets.

Since funds from customers mostly have no fixed maturity and may be payable at any time (deposits, passbook accounts), their runoff is modelled to determine their profile over time. La Banque Postale has adopted a conservative approach to assessing its liquidity positions.

Liquidity risk management

The Balance Sheet Monitoring Committee is responsible for managing liquidity risk in accordance with the principles and limits approved by the Group Risk Management Committee. Part of this responsibility is delegated to the ALM and Treasury Committee for liquidity risk.

In operational terms, La Banque Postale has implemented an Internal Liquidity Adequacy Assessment Process (ILAAP) which combines all of its liquidity limits, assessment, monitoring, reporting and management procedures. The process includes:

- a system of risk indicators associated with regulatory or internal limits, published at monthly intervals;
- daily monitoring of changes in the buffer consisting of unencumbered high-quality liquid securities and a proxy LCR;
- a financing plan which ensures the equilibrium of La Banque Postale's refinancing position on an ex-ante basis in La Banque Postale group's budget planning universe;
- twice-yearly market access tests to verify market access in different currencies and actual liquidity tests on securities;
- the Emergency Funding Plan (EFP), which is primarily intended to:
 - define alert thresholds to enable early detection of liquidity stress, whether specific to La Banque Postale or systemic,
 - identify all available liquidity-generating capacities (liquidity reserves and financing capacity),
 - mobilise governance to manage potential crises in a timely manner,
 - measure La Banque Postale's room for manoeuvre via a stress test system in the context of historically high stress.

**Liquidity risk measurement**

The main indicators of liquidity risk are presented below.

Liquidity Coverage Ratio (LCR)

The LCR is a monthly short-term liquidity ratio which measures La Banque Postale's capacity to withstand a severe deterioration in its financial situation for up to 30 days in a global crisis scenario. This ratio is calculated by dividing the sum of unencumbered, high-quality liquid assets by the liquidity requirement in a stress environment over a 30-day period. In order to be able to ensure that a sufficient liquidity cushion is available at all times using a daily internal liquidity risk metric, an LCR proxy is calculated daily.

Under banking regulations, the LCR must be greater than 100%. La Banque Postale's internal LCR target is higher than this, and it met this minimum level, with an LCR of 164.6% at end-December 2025, compared with 165% at end-December 2024.

Survival horizon

This indicator measures the number of days during which La Banque Postale would be able to meet its payment obligations in a crisis situation, solely by using its liquidity buffers and assuming that it continues to operate normally (*i.e.*, without extraordinary management action such as a lending freeze).

It is determined based on stressed dynamic gaps calculated for each crisis scenario (systemic, specific to La Banque Postale or both) and corresponds to the horizon observed under the least favourable scenario for La Banque Postale.

The survival horizon is expressed as a number of months (up to a maximum of six months, which corresponds to the crisis scenario horizon), plus the observed liquidity surplus or shortfall corresponding to the horizons set for risk management purposes.

Liquidity gap

La Banque Postale assesses its long-term liquidity level by reference to a liquidity gap. The liquidity gap includes static gap forecasts by maturity at 1-, 3- and 5-year horizons. The assumptions used correspond to a stressed approach, resulting from a conservative view of La Banque Postale group's liquidity position.

The liquidity gap assessment approaches are determined according to the type of asset (or liability) on the balance sheet:

- outstanding loans with fixed maturities (contractual runoff that may or may not be adjusted by a model);
- outstanding loans with no fixed maturities (conventional runoff);
- liquidity profile of the transferable assets;
- off-balance sheet items (liquidity commitments and guarantees).

Transactions with no contractual maturity (including customer deposits and passbook savings accounts) are included based on runoff conventions approved by the Balance Sheet Management Committee and the Group Risk department. Off-balance sheet transactions are included, taking into account drawdown assumptions. The transferability of certain transactions may be taken into account where appropriate.

▼ Long-term static liquidity gap at 31 December 2025

Average spot gaps (in millions of euros)	1 year	3 years	5 years
Uses	(231,512)	(172,056)	(131,740)
Resources	236,005	174,513	135,438
Off-balance sheet	(6)	(14)	4
Liquidity gap at 31 December 2025	4,487	2,443	3,703
Liquidity gap at 31 December 2024	7,768	12,203	11,836
Adjustments	(3,281)	(9,760)	(8,133)

The liquidity gap at 31 December 2025 is narrower than at end-2024 mainly due to the inclusion of calls on structured EMTNs (change in methodology) and changes in commercial balance sheet items, with a funding gap effect resulting from the rise in outstanding loans and the fall in outstanding deposits and savings. This effect was partly offset by sales within the ALM securities portfolio.

Net Stable Funding Ratio (NSFR)

The NSFR corresponds to the amount of available stable funding in relation to required stable funding. This ratio should be at least 100% at any time. "Available stable funding" (ASF) refers to the portion of resources that are not payable within the time frame considered, *i.e.*, one year within the context of the NSFR. The amount of "required stable funding" (RSF) of a business depends on the characteristics of its liquidity and the residual maturity of its assets (and off-balance sheet positions). At 31 December 2025, the NSFR was 118%, lower than at the end of the previous year.

Excluding management decisions, the fall in the ratio is mainly the result of a change in methodology regarding risk weightings under the CRR3 programme, as well as a technical change relating to the inclusion of accrued interest on deposits.

Liquidity reserve

The purpose of the liquidity reserve is to quantify the amount of cash and liquidity readily available through the sale or repurchase of securities in order to withstand a liquidity crisis.

The liquidity reserve is composed of:

- cash deposited with the Central Bank (excluding the average mandatory reserves calculated over the incorporation period);
- ECB-eligible securities with a satisfactory rating;
- retained covered bonds and covered bonds issued by La Banque Postale through its subsidiary La Banque Postale Home Loan SFH.

▼ Liquidity reserve at 31 December 2025

(in millions of euros)	31.12.2025
Cash and central banks	10,700
High quality liquid assets	23,300
Other ECB-eligible securities	10,200
TOTAL LIQUIDITY RESERVE	44,200

In addition, La Banque Postale is potentially also in a position to issue €8.8 billion worth of covered bonds eligible for central bank refinancing in accordance with the authorisations given in its Financing Plan, by collateralising its home loans.

Emergency Funding Plan (EFP)

The EFP is monitored by the Group's funding governance bodies (the ALM and Treasury Committee and the Refinancing Sub-Committee of the Group Risk Management Committee) and implemented by the Corporate and Local Development Banking Division (CLDB).

The EFP is part of the internal liquidity assessment process on which La Banque Postale reports each year. The EFP sets out the leading indicators selected to gauge the robustness of the (financial or banking) markets impacting the liquidity of La Banque Postale. These indicators can be broken down into two major groups:

- systemic indicators;
- entity-specific ("idiosyncratic") indicators.

A specific threshold (comfort, vigilance or warning) is defined for each indicator.

The EFP also makes provisions for a mechanism to be implemented in the event of a proven systemic or entity-specific crisis. This mechanism mainly takes the form of an inventory of the various sources of funds (or liquidity) available to La Banque Postale, based on the amounts involved and the speed with which they can be accessed. The EFP also makes provisions for specific governance through committees, which will monitor the leading indicators. The purpose of this governance organisation is to increase oversight of liquidity risk. In normal times, the indicators are presented at meetings of the ALM and Treasury Committee and periodically to the GRMC. They are also tracked during weekly meetings of the Refinancing Committee. The indicators selected, and the actions proposed, are tested on the markets in order to gauge their suitability along with market liquidity.

The funding test involves testing the market by issuing short-term debt. The aim of this type of test is to regularly verify La Banque Postale's ability to quickly raise funds on the markets to ensure that its estimated borrowing capacity remains valid.

This type of test is carried out at least twice a year.

Ability to access external financing

In line with the ALM Committee and the GRMC's healthy and prudent liquidity management, La Banque Postale has secured diversified sources of financing, including:

- a €20 billion NEU CP (Negotiable European Commercial Paper) programme and a €10 billion ECP (European Commercial Paper) programme to refinance a portion of La Banque Postale's short-term financing requirements and satisfy demand from institutional customers;
- a €2 billion NEU EMTN programme to refinance a portion of La Banque Postale's short-term financing requirements and satisfy demand from institutional customers;
- a €20 billion retail EMTN programme enabling the issue of senior (vanilla and structured), non-preferred senior and Tier 2 debt;
- a €10 billion retail structured senior debt programme;
- a €30 billion EMTN programme for the issue of home loan bonds (*Obligations de financement de l'habitat* – OFH) via its secure financing vehicle, La Banque Postale Home Loan SFH, a La Banque Postale SA subsidiary created in 2013;
- access to European Investment Bank (EIB) refinancing under La Banque Postale's eligible funds commitment;
- a portfolio of HQLA (high-quality liquid asset) securities, consisting mainly of rapidly accessible, high-quality government bonds which represent a stable source of eligible assets enabling access to ECB refinancing operations or to the securities repo market;
- access to the Brokertec, Eurex Repo and Eurex GC Pooling, NGT Bondlend, MTS Repo and GLMX Repo platforms and the €GCPlus triparty repo market via MTS;
- access to the interbank market and a customer base of asset managers and European or international government agencies.

La Banque Postale also has access to a secured financing vehicle via the Caisse de Financement Local (CAFFIL), to which it regularly sells originated local public sector loans.

▼ Encumbered/unencumbered assets at 31 December 2025

Other assets	29,418				234,787			

La Banque Postale group's encumbered assets consist of the following:

- securities delivered under repurchase agreements with other financial counterparties;
- securities pledged for the Central Bank and Crédit Logement;
- home loans pledged as collateral for La Banque Postale Home Loan SFH's covered bond issues;
- margin calls on securities and derivatives;
- collateral deposits.

2.7.3.3.2.3 Liquidity management at SFIL

Governance

Liquidity risk appetite represents the level of risk that SFIL is authorised to assume, given the expectations of stakeholders (shareholders, regulators, rating agencies, customers, etc.), in order to be able to carry out its corporate missions. The risk appetite is defined by the Board of Directors based on the recommendation of SFIL's Executive Committee.

It takes the form of a series of monitoring indicators and limits defined by the Market and Balance Sheet Risk division, which set the framework for the management of liquidity risk in its various forms. These indicators and limits are reviewed annually.

They are managed by the ALM team in the Finance and Financial Markets division, which produces monitoring indicators, performs first-level controls and proposes management measures to ensure compliance with limits.

The team's management is overseen by the Market and Balance Sheet Risk division, which performs second-level controls on the most significant indicators and checks compliance with the established limits.

This activity is organised around three committees:

- the Board of Directors, which delegates the definition of risk appetite to the Risk and Internal Control Committee (RICC);
- the Asset-Liability Management Committee (ALCO), which decides on the ALM strategy and oversees its correct implementation based on the management indicators produced for its review;
- the ALM Liquidity Committee, which prepares all relevant information for the ALCO and implements the ALCO's decisions.

Liquidity risk measurement

Refinancing risk is monitored using the dynamic one-year borrowing requirement indicator (funding required to refinance static liquidity needs over the next 12 months, plus the amount derived from origination assumptions). This indicator is subject to a set of limits, including a first threshold (early warning Risk Appetite Framework limit), set at €10 billion. In view of the Group's financing capacity, the early warning RAF limit has been raised to €12 billion, leading in turn to an increase in the RAF limit to €13.5 billion and in the recovery plan limit to €15 billion.

At 31 December 2025, the dynamic one-year funding requirement stood at €5.3 billion, €3.3 billion lower than at end-2024. This improvement is mainly due to a fall in the export credit business compared to the assumptions made one year earlier, which is not reflected in the 2026 assumptions.

Refinancing risk (in billions of euros)	31.12.2025	31.12.2024	RAF limit	Early warning RAF
Dynamic one-year funding requirement	5.3	8.6	13.5	12.0

Regulatory risk is monitored through the LCR and NSFR indicators, which are subject to threshold and limit controls.

Regulatory ratios (SFIL consolidated, %)	31.12.2025	31.12.2024	RAF limit	Early warning RAF
LCR	313%	440%	140%	150%
NSFR	125.1%	125%	107%	110%

Compliance with these limits is guaranteed by a set of management rules defined by the ALCO, which are also subject to limits. These rules concern the concentration of debt maturing within one month (LCR management indicator) and debt maturing within 12 months (NSFR management indicator). The principle consists of ensuring that the accumulation of debt maturities over these horizons does not lead to a funding requirement (in terms of amount and/or duration) that is incompatible with the Group's operating capacity. The one-month limit is €2 billion and the 12-month limit is €9 billion.

Spread risk is monitored using two indicators, one designed to measure and control the Group's exposure up to the extinguishment of balance sheet liabilities and the other to measure and control its medium-term exposure (five years), over a realistic management horizon.

Spread risk	31.12.2025	31.12.2024	RAF limit	Early warning RAF
Average 5-year gap (in billions of euros)	3.7	3.8	8.0	6.0
Percentage of unfunded assets	18%	16%	30%	25%

In addition, SFIL has developed a stress testing system based on stress scenarios (systemic shocks and a combination of systemic and idiosyncratic shocks) and an assessment of their impact on SFIL's activities. They form part of the Liquidity Adequacy Assessment Process (ILAAP) and co-exist with other risk measurement processes (ICAAP, recovery plan) in order to ensure that all stress factors are coherent and applied to the various types of risk.

The scenarios are reviewed at least once a year. They are applied to SFIL and CAFFIL, incorporating the management specificities and regulatory restrictions applicable to each entity. The main stress factors used are:

- prolonged closure of the interbank market and mortgage bond market;
- a general decrease in the value of the securities in the liquidity reserve, plus in some cases an additional discount for climate risk;
- an increase in the payment of collateral on derivatives;
- default of a derivatives counterparty;
- unpaid receivables to customers.

At 31 December 2025, a survival period of one year is respected in each of the stress scenarios.

Financing capacity

In normal circumstances, the Group's activity is financed by:

- covered bond issues at CAFFIL, secured by assets eligible for the cover pool (CAFFIL);
- long-term EMTN issues at SFIL;
- short-term NEU CP issues at SFIL.

The main features of the economic environment in 2025 were:

- at international level, a turbulent geopolitical climate since Donald Trump took office, leading to considerable market volatility;

- Total exposure to spread risk is monitored based on the proportion of unfunded assets, calculated as the ratio between the liquidity gap (excluding excess liquidity) up to maturity and the liquidity gap on total balance sheet assets. This measurement is used to assess spread risk as a function of both the size of the refinanced balance sheet and its maturity profile.
- Medium-term exposure to spread risk is monitored based on the five-year average of the static gap. This indicator gives an idea of both the maximum funding requirement over the next five years (around double the level of the indicator) and the loss that would be incurred in the event of an increase in the Group's refinancing costs, due to spread risk sensitivity.

- at national level, continued political uncertainty stemming from the dissolution of the National Assembly in 2024 leading to a slight increase in the cost of French OAT, SFIL and, to a lesser extent, CAFFIL, the latter being protected by its status as a specialised credit institution (SFC). In contrast, France's credit rating downgrades by Fitch, DBRS and S&P did not have a significant impact on OAT, SFIL and CAFFIL, as the impacts of the downgrades had been largely expected. Spreads eased towards the end of 2025.

Against this backdrop, the SFIL group finalised its 2025 financing programme in October and was then able to take advantage of renewed investor appetite for longer maturities at affordable prices to bring forward part of its 2026 programme.

The SFIL group issued a total of €9.2 billion worth of long-term bonds in 2025, with an average maturity of 8.5 years and an average spread of 72 basis points versus three-month Euribor. Year-end issues (€0.7 billion) ahead of the 2026 programme had an average maturity of 13.1 years and an all-in cost of 77 basis points.

Impact of climate risk

As part of its review of climate-themed issues, SFIL identified several stress scenarios to which it could be exposed. These included:

- a fall in ESG issuances due to insufficient green or social loan originations;
- conversely, impossibility for SFIL to satisfy very strong demand for local public sector loans due to the market being flooded with ESG issuances;
- the risk of SFIL falling out of favour with the capital markets due to its reputation being tainted by the financing of unsustainable activities;
- a fall in SFIL's liquidity reserves due to a deterioration in the quality of its assets, mainly sovereign debt and equivalents.

The probability of occurrence of these risks is considered to be both low and remote.

2.7.3.3.3 Group exposure to liquidity risk

The tables below show the maturities of the Group's financial assets and liabilities by contractual maturity date.

Fixed-income securities, loans and debt are broken down by contractual maturity date. Equity investments and mutual funds are included in the "No fixed maturity" column. Demand deposits

(assets and liabilities) are shown in the "< 3 months" column. The amounts presented in this table correspond to the balance sheet amounts (including the effects of discounting).

These tables present the balance sheet position at the reporting date; they do not take into account management decisions dealing with maturity mismatches, or the future production of assets and liabilities.

2.7.3.3.4 Overall interest rate risk

2.7.3.3.4.1 Definition, scope and governance

Interest rate risk arising from non-trading book activities – or overall interest rate risk – is defined as the potential risk resulting from changes in interest rates for all balance sheet and off-balance sheet transactions, with the exception, if applicable, of transactions subject to market risk as described in 2.7.3.2.

Overall interest rate risk is managed and monitored at Caisse des Dépôts in accordance with article 54 of amended Decree No. 2020-94 of 5 February 2020, which requires the Group to have risk measurement systems in place across its entire scope of consolidation, i.e., for each of its relevant entities, and for these systems to be adapted to the nature and volume of their transactions.

Group governance

The ALM teams at Caisse des Dépôts Central Sector and the subsidiaries manage overall interest rate risk within their respective scopes (interest rate gaps, trajectories, NPV sensitivity).

The supervision of interest rate risk is the responsibility of each entity's ALM Committee, which monitors indicators and forecasts trends based on multi-year trajectories and commitment and/or investment policy guidelines. Interest rate risks are generally reviewed on a monthly basis.

Common principles for all the Caisse des Dépôts Group's regulated entities are set out in the Group's financial risk management policy.

The regulated entities of the Caisse des Dépôts Group have a set of procedural documents that set out the interest rate risk indicators and their limits, which must reflect an interest rate risk appetite consistent with the interest rate risk appetite defined at Group level. In order to incorporate their own interest rate risks within the Group's risk appetite, each entity estimates the impacts of multi-year scenarios in the Group's macroeconomic framework.

Entities have IT systems for monitoring their interest rate risk. If necessary, the entities document the method used to set limits. The document sets out the rules for dealing with and escalating limit overruns.

2.7.3.3.5 Measuring and managing overall interest rate risk

2.7.3.3.5.1 Measuring and managing interest rate risk at the Central Sector

The Central Sector analyses assets and liabilities based on three types of interest rates: fixed, variable and contractual. The fixed-rate position is monitored based on the fixed-rate gap – corresponding to the excess of fixed-rate liabilities over fixed-rate assets – and changes in the gap over time as assets and liabilities fall due. The fixed-rate position mainly comprises deposits originating from the legal professions on the liabilities side and fixed-rate medium-term and long-term bond portfolios and fixed-rate loans on the assets side. Deposits are taken into account based on the same runoff assumptions and models as for liquidity calculations.

▼ NIM sensitivity

(in millions of euros)	31.12.2025
200-bp decrease	275
100-bp decrease	137
100-bp increase	(137)
200-bp increase	(275)

Given the specific nature of the Central Sector's balance sheet, which includes a large proportion of non-interest-bearing assets (equities, strategic investments, property), the NIM gives only a partial snapshot of the Sector's results. The Central Sector's balance sheet structure is unusual in that interest-bearing liabilities always exceed interest-bearing assets.

2.7.3.3.5.2 Interest rate risk measurement and management at La Banque Postale

Overall interest rate risk is overseen and monitored by the Balance Sheet Risk department, a cross-business risk management unit which reports to La Banque Postale's Group Risk Management division. The department has several goals:

- to map liquidity, interest rate and foreign exchange risks, assess the risk management system and propose limits in line with La Banque Postale's risk appetite;
- to provide periodic monitoring of the ALM indicators used to manage La Banque Postale's overall consolidated interest rate risk and that of its banking and insurance subsidiaries;
- to carry out audits of the calculation processes for the various indicators (static and dynamic) and control the integrity of calculated exposures;
- to audit the methodologies used.

The current environment driven by rising interest rates has resulted in an improvement in the margin on fixed-rate investments on the assets side of the balance sheet, while the interest on fixed-rate borrowings on the liabilities side remains constant.

Since 30 September 2023, the Central Sector has produced quarterly net interest margin (NIM) projections and sensitivity calculations, based on quarter-end balance sheet data (including swaps), which are used to monitor and manage the interest rate position. These calculations are based on a constant balance sheet, using rolling 12-month data. The results are presented to the Balance Sheet Management Committee (BSMC).

The NIM indicator is calculated as the difference between the institution's interest income and interest expense. It therefore only concerns interest rate instruments (fixed and variable rate) and does not include significant components of the Central Sector's business model (in particular, recurring dividends from its equity portfolio and strategic investments, and recurring rental income from its rental property portfolio).

The NIM calculation at a given date is based on a constant balance sheet, i.e., it takes into account the contractual maturities of assets and liabilities and assumes that matured assets and liabilities will be replaced by items with the same characteristics for which the interest rate is the market rate on the replacement date. This means that the structure and size of the balance sheet remains unchanged over the NIM calculation period.

NIM sensitivity corresponds to the difference between the results obtained by applying the central scenario and those obtained from stressed scenarios assuming 200- and 100-bps increases/decreases in interest rates.

This risk is monitored using various ALM indicators, including indicators showing the sensitivity of future margins and economic value to interest rates, and by modelling scenarios which assess the entity's capacity to withstand exogenous shocks. The interest rate movements tested affect both uncertain cash flows from financial products and earnings from Retail Banking operations via behavioural models – particularly implicit options available to customers.

The supervision of interest rate risk is the responsibility of the ALM Committee, which monitors ALM indicators and forecasts trends based on commercial policy guidelines and observed customer behaviour. The interest rate risk indicators are also monitored by the Group Risk Management Committee. Interest rate risks are generally monitored on a monthly basis.

Objectives

Interest rate risk is managed so as to hedge the sensitivity of La Banque Postale's future net interest margin while ensuring compliance with value sensitivity indicators. A dynamic approach based on the business plan is used, applying interest rate derivatives (hedges) or adjusting commercial policies.

The balance sheet includes implicit and explicit options, leading to non-linear economic values based on interest rates. In this context, ALM proposes the regular rebalancing of structural positions using hedging instruments.

Scope

As required by the Basel Committee, significant interest rate risks the banking book are identified and measured. Some of these risks may give rise to a specific follow-up procedure.

Interest rate risk is measured by maturity and by type of index for products dependent on variable or adjustable rates (Euribor, inflation, €STR, etc.), taking into account likely run off conventions, which are themselves dependent on market conditions.

Interest rate risk includes several risk factors:

- risks relating to the term-based structure of interest rates on interest-sensitive instruments, which in turn stems from differences in the timing of rate revisions. This risk differs depending on whether changes in the term-based structure of interest rates are identical over the entire yield curve (parallel risk) or differ from period to period (non-parallel risk);
- risks linked to changes in the inflation rate for products tied to this index, either directly and/or through the impact of inflation on regulated rates and on savings products with inflation-linked pricing;
- baseline risks: these are related to the use of multiple baseline interest rates and arise from the imperfect correlation of different curve rates;
- risks caused by positions exposed to inflation and regulated interest rates;
- option-related risks (contractual or behavioural);
- CSRBB (credit spread risk in the banking book) risk;
- scale risk related to the mismatch between the interest rates for new loans and their hedged rate.

The change in the net interest margin is therefore measured by reference to several interest rate scenarios. The interest rate risk on the balance sheet is simulated with dynamic modelling, taking into account future changes in outstanding amounts (early repayments, loan originations, etc.), in accordance with behavioural models and the business plan.

▼ Interest rate gap by maturity at 31 December 2025

(Negative amount = Surplus uses at fixed rates) (in millions of euros)				
	0-1 year	1-5 years	5-10 years	> 10 years
Uses	(161,014)	(100,037)	(51,405)	(7,012)
Resources	135,595	80,374	41,794	4,415
Off-balance sheet	12,252	11,039	5,499	1,241
Interest rate gap at 31 December 2025	(13,166)	(8,624)	(4,112)	(1,356)
Interest rate gap at 31 December 2024	(12,084)	(10,784)	(6,330)	(1,891)
ADJUSTMENTS	(1,082)	2,160	2,218	535

At 31 December 2025, there was a lending (asset) position over the entire timescale. The gap beyond one year was narrower than at 31 December 2024 due to a reduction in fixed-rate home loans, the securities position (sale of securities to reduce asset-liability mismatches) and the implementation of hedging through fixed-rate borrower swaps.

EVE (Economic Value of Equity) sensitivity

EVE sensitivity corresponds to the change in economic value resulting from different interest rate shock scenarios. It is calculated statically from the contractual maturities of existing balance sheet items, taking into account behavioural models and runoff conventions for items without contractual maturities. The following shock scenarios were modelled:

1. parallel 200-bp increases in short- and long-term rates;

Trading operations executed by the trading desk do not fall within the scope of overall interest rate risk management as the risk associated with these transactions is monitored and managed according to the individual limits for each portfolio. These specific trading desk portfolios are subject to market risk-type limits.

Assessing overall interest rate risk

Agreements and models

The interest rate gap and interest rate sensitivity valuation methodologies used are determined according to the type of assets or liabilities comprising the balance sheet:

- outstanding loans with fixed maturities (contractual runoff that may or may not be adjusted by a model);
- outstanding loans with no fixed maturities (conventional runoff);
- off-balance sheet items (liquidity commitments and guarantees).

Transactions with no contractual maturity (including customer deposits and passbook savings accounts) are included based on runoff conventions approved by the Balance Sheet Management Committee and the Group Risk department. Off-balance sheet transactions are included, taking into account drawdown assumptions.

Interest rate gap

The nominal interest rate gap is calculated for fixed-rate transactions and for variable-rate and adjustable-rate transactions up to the next rate review or reset date. The nominal interest rate gap does not take into account interest rate payments.

The interest rate gap is the difference between average fixed-rate liabilities and average fixed-rate assets, including the effects of off-balance sheet items, by maturity.

2. parallel 200-bp decreases in short- and long-term rates;
3. steeper yield curve (decrease in short-term rates, increase in long-term rates);
4. flattening of yield curves (increase in short-term rates, decrease in long-term rates);
5. increase in short-term rates;
6. decrease in short-term rates.

EBA guidelines also require banks to apply a regulatory floor for the risk-free rate after a shock. The floor starts at -1% and is increased in steps of 0.05% to 0% at 20 years.

**Supervisory shock scenarios****EVE****▼ Changes in economic value**

<i>(in millions of euros)</i>	31.12.2025	31.12.2024
Parallel increase	-1,817	-1,963
Parallel decrease	+773	+1,408
Steepening	-236	-368
Flattening	-284	-248
Rise in short-term rates	-750	-713
Decrease in short-term rates	+259	+458

The least favourable interest rate scenario for La Banque Postale is a 200 basis-point parallel increase in the yield curve (€1,817 million reduction in EVE, representing -9.5% EVE sensitivity vs. Tier 1 capital). The regulatory limit is -15%.

EVE sensitivity decreased in 2025 due to the fixed-rate borrower swaps put in place, the sale of fixed-rate securities and the increase in Tier 1 capital.

Net interest margin sensitivity

Net interest margin (NIM) sensitivity is defined as the difference between NIM in an interest rate shock scenario and NIM in a baseline interest rate scenario. NIM sensitivity is calculated for each interest rate scenario taking into account interest rate-dependent behavioural models, and by integrating levels of loan

origination and deposits from the commercial business, along with assumptions related to equivalent financial transactions in the central scenario. Only behavioural models and floating rate transactions show a reaction to the shock scenario. Their impacts on amounts outstanding modify the level of short-term financing.

NIM sensitivity is also calculated after applying the six regulatory shocks (listed above).

The net interest income standard outlier test (NII SOT) is a regulatory indicator and corresponds to the worst-case decline in the one-year net interest margin (NIM) in the event of a +/- 200-bp shock, on a constant balance sheet basis.

EBA guidelines also require banks to apply a regulatory floor for the post-shock risk-free rate.

▼ Changes in net interest income

<i>(in millions of euros)</i>	31.12.2025	31.12.2024
Parallel increase	39	(41)
Parallel decrease	(121)	21

Projected NIM sensitivity to a -200-bp shock on a constant balance sheet basis moves from positive territory (asset-sensitive) at 31 December 2024 to negative territory (liability-sensitive) at 31 December 2025. This can be explained by the overexposure to fixed-rate liabilities related to the sale of fixed-rate securities, and a fall in outstanding fixed-rate customer deposits and savings (demand deposits and PEL home savings accounts) that outpaced the increase in outstanding fixed-rate home loans.

Note that the data presented here correspond to regulatory sensitivity (NIM SOT) on a constant balance sheet basis, whereas the previous sensitivity data were based on a dynamic balance sheet.

2.7.3.3.5.3 Measuring and managing interest rate risk at SFIL**Governance**

Interest rate risk appetite is defined at SFIL-CAFFIL group level by the Board of Directors based on the recommendation of SFIL's Executive Committee.

It is rolled down into a set of monitoring indicators and limits defined by the Market and Balance Sheet Risk division, for the management of fixed-rate risk, basis risk and floor risk. These indicators and limits are reviewed annually.

Risks are managed by the Finance and Financial Markets division's ALM team, which produces monitoring indicators, performs first-level controls and proposes management measures to ensure compliance with limits.

The team's management is overseen by the Market and Balance Sheet Risk division, which performs second-level controls on the most significant indicators and checks compliance with the established limits.

This activity is organised around three committees:

- the Board of Directors, which delegates the definition of risk appetite to the Risk and Internal Control Committee (RICC);
- the Asset-Liability Management Committee (ALCO), which decides on the ALM strategy and oversees its correct implementation based on the management indicators produced for its review;
- the ALM Interest Rate Committee, which prepares all relevant information for the ALCO and implements the ALCO's decisions.

Hedging strategy

Interest rate risk management processes are designed to (i) protect the value of the Group's capital over the long term by monitoring net present value (NPV) sensitivity and (ii) limit short-term income volatility by managing 12-month NIM sensitivity.

Interest rate risk is managed differently at SFIL and CAFFIL in order to take into account the specific characteristics of each entity's balance sheet and businesses.

- SFIL does not accept interest rate risk as an entity. The interest rate risk hedging strategy therefore consists of a quasi-perfect micro-hedge, achieved through:

- €STR swaps;
- export credit transactions carried out by SFIL, for the stabilisation mechanism;
- perfectly matching asset and liability transactions with CAFFIL.

- CAFFIL implements two different interest rate hedging strategies, depending on the nature of the transactions on its balance sheet:
 - a micro-hedging strategy for balance sheet items that are not natively at euro-adjustable rates and that generate a significant interest rate or currency risk due to their nature (currency, interest rate type, notional value, term, etc.). The micro-hedged items are all currency transactions and structured rate securities and loans managed off-the-run. The items hedged are swaps against Euribor or €STR;
 - a macro-hedging strategy for other euro-denominated transactions: SPL loans, cash investments, public and private issues, etc. The macro-hedging strategy is mainly to unwind swaps (liability positions to cover asset positions and vice versa) and set up additional swaps if necessary. These hedges are set up on the market by CAFFIL either directly or through SFIL.

Interest rate risk measurement

Interest rate risk is managed using two types of indicator:

- NPV sensitivity, which measures exposure to fixed-rate risk and, since 1 January 2024, exposure to Euribor floor risk. It is calculated on all fixed-rate and adjustable-rate transactions in the accounts of SFIL + CAFFIL, without any assumptions concerning future originations;

- 12-month NIM sensitivity, which is measured for all fixed-rate and adjustable-rate transactions in the accounts of SFIL + CAFFIL based on the assumption that each transaction is rolled over at maturity so as to maintain a constant balance sheet.

Net present value (NPV) sensitivity

NPV sensitivity is calculated according to eight stress scenarios (the six regulatory scenarios used to calculate outlier sensitivity + two internal scenarios combining both a yield curve inversion risk and a slope risk). A +25% volatility shock is applied to the option risk associated with floors, in accordance with the recommendations of the regulator, and a -25% shock is applied for internal management purposes, ensuring prudent treatment of SFIL's option risk exposure. The level of the sensitivity indicator, covered by a limit, corresponds to the maximum loss observed in the eight scenarios.

The sensitivity limit was defined by the ALCO at a loss of €80 million, with an RAF early warning triggered at a loss of €70 million.

At 31 December 2025, the maximum decrease in NPV was €33.1 million under internal scenario #2 (bull steepening due to rising long-term rates) versus a maximum decrease of €16.9 million at 31 December 2024 under internal scenario #1 (downward movement of the yield curve along with bear steepening resulting from a fall in short-term rates).

▼ NPV sensitivity at 31 December 2025

(in millions of euros)	31.12.2025	31.12.2024	RAF limit	Early warning RAF
200-bp increase	12.4	(6.7)	(80.0)	(70.0)
200-bp decrease tiered floor	(5.5)	19.3	(80.0)	(70.0)
Increase in short-term rates	2.3	(14.4)	(80.0)	(70.0)
Decrease in short-term rates, tiered floor	(24.8)	4.9	(80.0)	(70.0)
Tiered floor flattening	(1.5)	(11.6)	(80.0)	(70.0)
Tiered floor steepening	(14.3)	3.2	(80.0)	(70.0)
Internal scenario #1	31.1	(16.9)	(80.0)	(70.0)
Internal scenario #2	(33.1)	4.3	(80.0)	(70.0)

Net interest margin sensitivity

The risk to interest income is monitored through the NIM (net interest margin) sensitivity indicator, calculated for (i) a parallel shock of +200 bps and (ii) a parallel shock of -200 bps with a -100 bps floor. NIM sensitivity is calculated on a constant balance sheet over a one-year horizon, by offsetting each repayment or maturity with a new transaction having the same characteristics (amount, maturity, interest rate type) as the original transaction. The interest rates applied to rolled-over transactions are pre- and post-shock forward rates, plus a spread corresponding to budget assumptions.

NIM sensitivity is subject to a loss limit of €37 million, with an RAF early warning triggered at a loss of €33 million.

At 31 December 2025, the potential loss was €7.8 million for a 200-bp decrease in interest rates, compared to a €10 million loss for a 200-bp increase in interest rates 31 December 2024. In any event, the potential loss was below the €37 million limit.

▼ NIM sensitivity at 31 December 2025

(in millions of euros)	31.12.2025	31.12.2024	RAF limit	Early warning RAF
200-bp increase	7.0	(10.0)	(37.0)	(33.0)
200-bp decrease (tiered floor)	(7.8)	9.1	(37.0)	(33.0)

**Management of Euribor basis risk**

The basis risk is measured in relation to €STR. It is monitored using index gaps, calculated as the difference between Euribor-indexed assets and Euribor-indexed liabilities. These gaps are subject to a

limit for each index tenor, calculated on the average of the various 12-month gaps.

At 31 December 2025, the limits were respected.

▼ Exposure to Euribor basis risk at 31 December 2025

Average gap over one year	31.12.2025	31.12.2024	Limit
1-month Euribor	184.0	235.8	[0; 1,000]
3-month Euribor	352.1	(424.4)	[(2,000); 2,000]
6-month Euribor	(1,092.7)	(818.2)	[(2,000); 2,000]
12-month Euribor	723.8	745.2	[0; 1,000]

Impact of climate risk

The climate transition may have a significant impact on certain macroeconomic indicators (growth, inflation, etc.) or financial indicators (rise in interest rates, increased interest rate and exchange rate volatility, etc.).

However, the impact of climate risk on the management of interest rate risk is considered as low due to:

- systematic micro-hedging of structured loans likely to be affected by increased market volatility. In addition, this business is in runoff;
- SFIL's interest rate hedging policy, which consists of limiting the interest rate risk on new flows as much as possible.

2.7.3.3.6 Structural currency risk**2.7.3.3.6.1 Definition, scope and governance**

Structural currency risk, excluding trading, is defined as the risk of volatility in profit or equity, whether recognised or unrealised, due to changes in the exchange rate against a reference currency.

Currency risk is managed and monitored at Caisse des Dépôts in accordance with article 54 of amended Decree No. 2020-94 of 5 February 2020, which requires the Group to have risk measurement systems in place across its entire scope of consolidation, i.e., for each of its relevant entities, and for these systems to be adapted to the nature and volume of their transactions.

Group governance

Common principles for all the Caisse des Dépôts Group's regulated entities are set out in the Group's financial risk management policy:

- Caisse des Dépôts entities apply a prudent currency risk management policy. The list of authorised currencies is pre-approved by their governing bodies;
- the entities formalise their currency risk appetite and set their operational limits accordingly. The entities formalise their currency risk hedging strategy and ensure that it is both retrospectively and prospectively effective;
- exposure to currency risk from holding monetary and non-monetary assets and liabilities that are not hedged against currency risk must be contained. Such exposure is deemed to be contained when it can be demonstrated that measures have been implemented such that any impacts from currency fluctuations are low. Any residual sensitivity to currency risk must be reported to the governing bodies;
- the hedging methods are documented and tested using the accounting standards applicable to the Entity. The currency risk documentation sets out the rules for dealing with and escalating currency risk overruns.

The ALM teams at Central Sector and the subsidiaries manage currency risk within their respective scopes.

The supervision of currency risk is the responsibility of each entity's ALM Committee, which monitors indicators and forecasts trends based on multi-year trajectories and commitment and/or investment policy guidelines. Currency risks are generally reviewed on a monthly basis.

2.7.3.3.7 Measuring and managing currency risk**2.7.3.3.7.1 Measuring and managing currency risk at Caisse des Dépôts (Central Sector)**

The most significant currency positions held by Caisse des Dépôts (Central Sector) concern USD, GBP, CHF and JPY.

The Caisse des Dépôts' (Central Sector) currency risk hedging policy is to systematically finance foreign currency asset positions through real borrowing (issues) or synthetic borrowing (swaps). Exposure to currency risks on the carrying amount of foreign currency items is therefore fully neutralised. However, unrealised gains and losses on these positions are not hedged. This gap is monitored by:

- performing monthly VaR calculations that take into account extreme risk scenarios, for presentation at meetings of the Balance Sheet Management Committee;
- checking that the impact of exchange rate fluctuations on unrealised foreign exchange gains and losses on the equity portfolio is marginal (see section 2.7.3.2.3.2 "Market risk for the equity portfolio of the Caisse des Dépôts Central Sector", based on annual studies presented to the Balance Sheet Management Committee.

Residual flows paid or received in foreign currencies are monitored daily by ALM, with a limit per currency of €30 million and a limit for all currencies combined also of €30 million. Hedging orders are sent by ALM to the treasury desk, which executes them on the markets.

2.7.3.3.7.2 Measuring and managing currency risk at La Banque Postale

The operational foreign exchange risk, related in particular to customer bank transfers and financial activities, is moderate. La Banque Postale's banking balance sheet is managed almost exclusively in euros. Foreign currency market activities carried out by the cash management unit and portfolio-related activities are systematically hedged beyond a specified exchange rate position threshold.

The residual foreign exchange risk arising from the outcome of these transactions is reflected in the book foreign exchange position, which is reported daily. These positions are subject to limits in order to reduce the related risks by clearing them at least once a month with the Treasury Department.

The retail bank's foreign currency operations, which mainly involve international fund transfers, are fairly small.

At 31 December 2025, La Banque Postale's foreign exchange position represented a net asset of €0.1 million, including a net liability of €5.8 million in USD and a net asset of €5.2 million in GBP.

2.7.3.3.7.3 Measuring and managing currency risk at SFIL

The reference currency of SFIL group is the euro; currency risk therefore reflects the change in value of assets and liabilities in any currency other than the euro due to that currency fluctuating against the euro.

The management of transactions denominated in foreign currencies aims to limit exposure to currency risk as far as possible. Debt issues and assets denominated in foreign currencies are hedged by cross-currency swaps at the latest on initial recognition and until their final maturity, thus hedging the currency risk on the nominal value of these assets and liabilities and the related interest streams.

As an exception to this policy, foreign exchange positions that are limited in duration and volume are accepted for operational reasons, particularly in the context of export credit refinancing. This applies in the following situations:

- when the operational cost of processing hedging swaps is too high in relation to the risk to be hedged (the amount of drawdowns recognised in the balance sheet is low, the index to be hedged is not a standard index, etc.);

- when drawdowns made off-balance sheet cannot be perfectly micro-hedged, since the amount and timing of the drawdowns are by definition unknown;
- for unhedged currency margins.

This is monitored through the **sensitivity of euro/forex basis gaps** to a 10-basis-point shock and is controlled by a series of limits. These limits were reviewed in 2025 to take account of the rise in export credit activity in GBP and the possibility of entering into contracts in CHF and JPY. At this stage, however, there is no exposure to these two currencies.

At 31 December 2025, the limits were respected.

▼ Euro/currency risk sensitivity at 31 December 2025

(in millions of euros/10 bps)	31.12.2025	31.12.2024	RAF limit	Early warning RAF
USD	0.1	0.3	5.0	4.0
GBP	0.1	0.0	5.0	4.0

The monitoring process is supplemented by quarterly checks of the foreign exchange position to take account of transactions not monitored in the management system (payment of a commission

in a foreign currency, settlement of invoices, etc.). The net positions of the main currencies are subject to a very low currency limit.

At 31 December 2025, the limits were respected.

▼ Economic foreign exchange position at 31 December 2025

(in thousands of euros)	31.12.2025	31.12.2024	Limit
USD	175	749	3,000
GBP	185	291	2,000
CHF	89	133	500

2.7.4 Hedging transactions

A large proportion of the Group's balance sheet items generate interest income and expenses, the amounts of which are exposed to changes in interest rates and, to a lesser extent, foreign exchange rates. This may lead to a risk of changes in the cash flows received by the Group or in the fair value of its assets.

The Caisse des Dépôts Group's Multi-annual Financial Planning Process defines the Group's five-year investment policy by major asset class and by business line (Central Sector and subsidiaries),

with a view to managing the resulting changes in the financial ratios (solvency, liquidity, earnings). The multi-annual financial planning process is approved every year by a committee chaired by the Chairman and Chief Executive Officer of Caisse des Dépôts and by the Supervisory Board. The risk appetite procedure (also approved by the Supervisory Board) rounds out the multi-annual financial planning process, establishing hedging thresholds and limits where necessary, approved by the governing bodies.

2.7.4.1 Risk hedging strategy and objectives

2.7.4.1.1 Type of hedge – management of associated risks

As part of its management of the interest rate and currency risks linked to the asset/liability balances on the balance sheets of its entities, the Group may use derivatives.

Accounting hedge documentation is generally prepared for such economic hedges, except when the hedged items are recognised at fair value through profit and loss. In the latter case, derivatives

that are economic hedges of transactions recognised at fair value through profit and loss are not classified for accounting purposes as hedging derivatives but as derivatives held for trading.

Derivatives that form part of a hedging relationship which qualifies for hedge accounting under IFRS 9 and, where applicable, the provisions of IAS 39 concerning portfolio fair value hedges, are classified as either fair value hedges or cash flow hedges.

2.7.4.1.2 Fair value hedges – micro-hedging

A fair value hedge (micro-hedge) is a hedge of the exposure to changes in the fair value of specifically identified financial assets or liabilities.

In a fair value hedge of a financial asset or liability, the effective portion of the gain or loss on the hedging instrument offsets the loss or gain on the hedged item. The difference between the two amounts corresponds to the ineffective portion of the gain or loss on the hedging instrument, which is recognised in the income statement.

The economic relationship between the hedged item and the hedging instrument, to ensure the effectiveness of the hedging relationship that has been established, is created on inception of the hedging transaction. This hedging relationship is generally naturally effective insofar as one of the two legs of the swap accurately reflects the hedged item in terms of amount, maturity and interest rate.

2.7.4.1.3 Fair value hedges – macro-hedging

The Group applies the provisions of IAS 39 adopted by the European Union to macro-hedging transactions carried out as part of the asset/liability management of fixed-rate positions. Macro-hedging is mainly used to hedge entities' structural interest rate risk on fixed-rate financial assets and liabilities. Macro-hedging instruments are mainly interest rate swaps designated as fair value hedges of the Group's fixed-rate assets and liabilities.

2.7.4.1.4 Cash flow hedges and all-in-one cash flow hedges

A cash flow hedge is a hedge of the exposure to variability in cash flows from financial assets or liabilities, firm commitments or future transactions. Cash flow hedges are used to hedge the interest rate risk on adjustable-rate assets and liabilities. Derivatives used for cash flow hedging fix the amount of future cash flows.

In the particular case of forwards, they act as an "all-in-one" cash flow hedge which is automatically effective because the contract covers both the derivative and the underlying to be delivered (hence the term "all-in-one").

2.7.4.1.4.1 Hedging instruments

The Group uses several types of hedging derivatives to manage the interest rate and currency risks on its balance sheet items. These are mainly interest rate swaps (exchange of a fixed rate for a variable rate such as Euribor or €STR) and foreign exchange swaps (currency swaps and cross-currency basis swaps).

2.7.4.1.5 Hedged items

The Group hedges balance sheet transactions (both with financial counterparties and customers) using derivatives set up with market counterparties.

These transactions stem from different hedging strategies that aim primarily to hedge the interest rate and, to a lesser extent, currency risk.

2.7.4.1.5.1 Hedged assets

The hedged risk corresponds to the amount represented by the interest rate risk on fixed-rate bonds and loans, and by the interest rate risk on future cash flows (purchases of long-term bonds).

2.7.4.1.5.2 Hedge liabilities

The hedged risk corresponds to the amount represented by the interest rate risk on fixed-rate customer deposits (demand deposits, PEL home-saving plan) and fixed-rate bond issues.

2.7.4.1.6 Sources of hedge ineffectiveness

2.7.4.1.6.1 Hedging of a security with a swap

There are two types of fair value hedges:

- **Euribor hedges:** Euribor hedges are valued using a Euribor discount curve for the securities and an €STR curve for derivatives. The use of two different discount curves creates ineffectiveness that will become greater when the €STR-Euribor spread varies over time (ineffectiveness stemming from the changes in fair value of the variable leg of the swap, when this rate is not an overnight rate (like the €STR) but a pre-set rate (like the Euribor)).
- **€STR hedges:** €STR hedges are valued using an €STR discount curve for both the securities and the derivatives. The mathematical hedge is thus perfect between the security and the swap (security discounted using €STR with adjustment of the credit component and swap discounted using €STR), which is why this type of hedge is considered to be 100% effective and no effectiveness test is required.

2.7.4.1.6.2 Macro-hedging

Macro-hedging can become ineffective particularly if any of the hedged items are sold or settled, especially if the early repayment rate exceeds the estimates used when initially setting up the hedges.

Effectiveness tests

Tests are conducted on a regular basis to assess hedge effectiveness.

2.7.4.2 Impact of hedging transactions in the Group's consolidated financial statements

The impacts of hedge accounting are presented in the consolidated financial statements and in Notes 2.2.1 "Interest income and expense", 2.2.3 "Gains and losses on financial instruments at fair value through profit or loss", and 2.3.2 "Hedging instruments".

2.7.4.3 Impact of hedging transactions on the amount and timing of cash flows

The contractual maturities of the notional amount of the hedging instruments are presented in Note 2.3.2 "Hedging instruments".

2.7.5 Risks specific to the insurance sector

2.7.5.1 Insurance risk management and monitoring of the financial conglomerate

All of La Banque Postale group's subsidiaries that operate in the insurance sector must meet the applicable regulatory requirements at all times. As head of a financial conglomerate, La Banque Postale group is responsible for ensuring that each of its subsidiaries respects all such requirements. More generally, for all of its insurance businesses, La Banque Postale group makes sure that the risk management procedures in place are consistent with the principles of the Risk Management Operational Policy (RMOP) set out in its Risk Appetite Statement and Risk Organisation Charter.

Insurance is La Banque Postale's largest business line. Exposure to insurance risks mainly concerns CNP Assurances Holding, comprising CNP Assurances SA, CNP Assurances de Bien et de Personnes (composed of the three legacy insurance subsidiaries of La Banque Postale) and CNP Assurances Protection Sociale since 31 December 2024, which was created by CNP Assurances and La Mutuelle Générale.

CNP Assurances sells insurance policies to non-La Banque Postale customers either through its partners' distribution networks, or directly in the case of group insurance, both in France and internationally. As a parent company and head of a conglomerate, La Banque Postale is exposed to risks related to its insurance business in France and internationally.

In life insurance, changes in interest rates affect the market values of financial instruments, which in turn may affect CNP Assurances' income statement and/or its solvency ratios. They also have an impact on CNP Assurances' current and future profitability by affecting the terms on which policyholders' savings are reinvested or financing is raised, as well as influencing the behaviour of policyholders who may transfer their savings to products offering a more attractive yield or exercise their contractual surrender options.

The main insurance technical risk to which the Group is exposed is surrender risk.

Surrender risk is defined as the loss of or an adverse change in the value of insurance liabilities resulting from a change in policyholder surrender behaviour. Savings contracts include a surrender option for a contractually fixed amount. Surrender rates depend on how the financial markets perform, the yield offered by competing financial products, policyholder behaviour and their confidence in CNP Assurances and its subsidiaries, and the tax rules applicable to investments in life insurance products. This risk is particularly significant for CNP Assurances SA and its subsidiaries. High surrender rates could have a significant adverse effect on earnings or solvency ratios in unfavourable environments.

Currency risk is the risk of losses caused by adverse movements in exchange rates and their volatility. A distinction is made between structural currency risk arising on investments in subsidiaries whose functional currency is different from that of the parent company and transactional currency risk.

CNP Assurances SA and its subsidiaries have major undertakings in Latin America, mainly in Brazil, and procedures are in place to manage the exposure of profits generated in the region to fluctuations in the relevant exchange rates. The potential impacts of this risk are the volatility of IFRS capital, the potential effect on solvency and funding capacity, and the effect on consolidated profitability in the event of a lasting decline in the value of the Brazilian real.

Currency risk is limited on financial portfolios due to comparatively low exposure.

Non-life insurance: the main risk to which the Group's non-life insurance subsidiaries are exposed is underwriting risk, defined as the risk the insurer takes by providing insurance policies to natural persons and legal entities. An increase in the number of claims and/or a mismatch between the claims anticipated by the insurance subsidiary and the amounts actually paid out to the insured could have a negative impact on the results of La Banque Postale group whose materiality would be contained given the weight of non-life insurance at the level of La Banque Postale group.

Non-life insurance catastrophe risk is the risk of the occurrence of extreme, uncertain and one-off events that may cause substantial damage to insured property. These events, which are playing an increasingly central role, can be caused by the abnormal intensity of a natural hazard or by human intervention.

The CNP Assurances group is exposed to this risk through the property and casualty insurance products sold by its subsidiaries in mainland France and the French overseas departments and regions (CNPAI), as well as its subsidiaries in Brazil.

Nevertheless, given the potentially heavy impact of climate-related property damage claims, a series of risk prevention and mitigation measures have been introduced. These measures include reinsurance programmes that transfer part of the risk to reinsurers in order to efficiently manage the Group's exposure to climate-related property damage claims (comprehensive home-owner insurance, auto insurance, etc.), especially in high-risk areas.

As the head of a conglomerate subject to additional supervision, to support the integrated management of its businesses, La Banque Postale group reassesses its risk map annually to take into account the change in its consolidation scope and risk profile.

2.7.5.2 Types of insurance risks

La Banque Postale's insurance business risks are classified in seven risk families aligned with the risk classification in Solvency II and the La Banque Postale conglomerate risk map:

- strategic and business risks (including solvency risk);
- credit and counterparty risks;
- market risks;
- structural balance sheet risks;
- operational (including compliance risks);
- insurance underwriting risks;
- ESG risks.

The insurance activities of La Banque Postale group's insurance companies expose them to specific technical risks corresponding to the risk of losses or an unfavourable change in the value of insurance liabilities and the risk of a change in expenses. Insurance technical risks include:

a. life/long-term health underwriting risk:

- life catastrophe risk,
- termination (surrender) risk,
- mortality risk,
- longevity risk,
- morbidity risk,
- revision risk;

b. non-life underwriting risk:

- pricing and reserve risk,
- termination (surrender) risk,
- catastrophe risk;

c. health risk (excluding long-term);

d. expense risk.

Depending on the category, these risks evolve in response to macroeconomic developments, the characteristics of the insured portfolios, changes in customer behaviour, changes in climate risk, the occurrence of accidents and public health or regulatory decisions.

The disclosures required by IFRS 17 on risks relating to insurance activities are presented in note 2.4.9 "Insurance risks".

2.7.6 Non-financial risks

2.7.6.1 Operational and compliance risk

2.7.6.1.1 Definition and scope

Operational risk is the risk of losses stemming from inadequate or failed processes, people and systems, or from external events. Operational risk notably includes risks related to low-probability but high-impact events, internal and external fraud risks as defined in article 324 of the aforementioned Regulation (EU) No. 575/2013, and model-related risks (article 8 of Decree No. 2020-94 of 5 February 2020 as amended). Caisse des Dépôts et consignations implements policies and processes to assess and manage its exposure to operational risk. For the purposes of these policies and processes, the Company specifies what constitutes an operational risk. It has contingency and business continuity plans, which it ensures are consistent and effective. It has a risk committee for each business, and resources adapted to operational risk management (article 133 *et seq.* of the aforementioned Decree).

For Caisse des Dépôts, compliance risk is defined in article 8-13 of the Decree of 5 February 2020 as amended as the risk of legal, regulatory or disciplinary sanctions or significant financial losses due to failure to comply with provisions relating to banking and financial activities, regardless of whether these provisions are legal or regulatory, directly applicable national or European provisions, professional or ethical standards, or compliance-related decisions by Caisse des Dépôts. For its banking subsidiaries, compliance risk also includes reputational risk and failure to comply with instructions from the persons who effectively run the undertaking, given in accordance with the guidelines of the supervisory body (Decree of 3 November 2014 as amended, adapted to their businesses accordingly).

2.7.6.1.2 Main operational and compliance risk factors related to the conduct of business

2.7.6.1.2.1 Banking and financial non-compliance

The risk of non-compliance with banking and financial regulations creates a reputational risk for Caisse des Dépôts and the Group. In particular, these regulations include:

- regulations governing financial security (anti-money laundering and terrorist financing – AML-CFT), know-your-customer (KYC) obligations, financial sanctions and embargoes;
- rules governing financial ethics (market abuse) and customer protection.

In order to protect itself against this risk, the Caisse des Dépôts Group continues its efforts to strengthen the management of the main causes of this risk (lack of AML-CFT due diligence in business relationships, insufficient training on regulatory requirements, failure to monitor systems and malfunctioning detection tools).

At the Group level, the following risk management measures are deployed:

- ongoing work on its compliance projects;
- continuing to raise employee awareness of the issues;
- close monitoring by Caisse des Dépôts of AML-CFT measures in place at its subsidiaries, with the implementation of specific resources for managing AML-CFT risk management (definition of norms and standards, measurement of risk and monitoring of the operation of systems, organisation of AML-CFT information-sharing to strengthen due diligence with regard to customers common to several Group entities, etc.).

More generally, Caisse des Dépôts pays particular attention to the risk of non-compliance with the standards applicable to it. Caisse des Dépôts' ongoing compliance efforts are part of a process of continuous improvement, both within the Public Institution and within the Caisse des Dépôts Group.

2026 Group risk mapping

Three compliance risks remain significant: financial security risk, personal data protection risk and the risk of non-compliance with customer protection obligations.

2.7.6.1.2.2 External and internal fraud

External and internal fraud is a concern for all Group entities. External fraud (payment media fraud, document fraud, identity theft, data theft) is of particular importance for financial entities whose activities are more exposed (account management, lending, investment, payment media). The Group has a zero-tolerance policy towards internal fraud.

The fraud risk management systems cover a very broad range of initiatives adapted to the many different types of fraud and business activities. They cover the three aspects of prevention, detection and cure, and are based in particular on:

- the definition of a normative framework through a Group-level anti-fraud procedure and an anti-fraud procedure at the level of the Public Institution;

- mapping of operational risks, including fraud risk, based on identified processes, activities and potential risk events;
- segregation of tasks, to ensure that responsibilities are shared at process level;
- the definition of a system of delegations of authority that improves accountability, specifies the decision approval chain and is adapted to employees' level of expertise and experience;
- training and initiatives to raise employee awareness of fraud risks;
- organisation of first-tier controls, including managerial controls, at key stages of processes, and verification of their effectiveness by independent second-tier controls.

2025 Group-level risk rating

Fraud risk – mainly resulting from external fraud – remains critical, although it is gradually decreasing owing to improvements in risk management systems. The fraud prevention function managed by CDC's Legal and Compliance department became fully operational in 2025. "Recurring" losses reported through the Group's event log process remained high at €22.7 million in the first half of 2025 (€52 million in 2024), with detected fraud cases involving individual amounts exceeding the risk appetite. At La Poste Groupe level, fraud continues to be rated as a major concern, with risk management measures being constantly improved. However, payment fraud at LBP remains higher than the market average. The fraud insurance taken out by the Central Sector has been in effect since November 2025.

2.7.6.1.2.3 Cyber security

Cyber risk is the risk of a cyber attack or cyber crime leading to a critical fault or failure in the IT systems, potentially resulting in a leak of confidential information, a partial or complete halt in production, a loss of strategic opportunity or reputational damage.

In addition, with the exponential growth in cyber risks, linked to various factors and contexts (political, geopolitical, events, etc.) and the development of cybercrime in recent years, systems security crises are becoming increasingly diverse.

The size of the Group and its activities mean that every Group entity must be aware of the cyber threat.

At Group level, the following risk management measures have been deployed:

- roll-out of the Group's information systems security (ISS) policy based on the risk appetite of the Public Institution and its subsidiaries;
- increase in the teams operating on the three lines of defence;
- organisation of regular technical tests (intruder detection tests/ bug bounty/Red team) on Caisse des Dépôts' mission-critical assets, in accordance with an audit programme drawn up at the beginning of the year;
- execution of subsidiaries' ISS control plans;
- strategic cyber threat intelligence gathering, covering economic, geopolitical and cyber intelligence.

The main risk management measures deployed at the level of the Public Institution are as follows:

- the development of procedure manuals and documentation describing processes and procedures, including:
 - the Public Institution's ISS policy,
 - addition of an ISS policy covering cloud computing,
 - multi-factor authentication and password procedures;
- an AI management (AIM) tool (GIGA) for reviewing security clearances, offering new functions and the option of implementing segregation of duties (SoD) matrices;

- security alert processing by the Cyber Security & Information Systems department, as part of the process for monitoring sensitive data leaks, using Data Leak Prevention (DLP) or Internet surveillance mechanisms;
- proposing and managing cyber solutions for the Public Institution and its subsidiaries, using secure communication tools designed to protect exchanges of information;
- execution of the Public Institution's ISS control plan.

The Group Risk Management division's Cyber Security department leads a network of CISSOs in the subsidiaries. This network is operational and enables expertise and solutions to be shared, in particular through seminars held twice a year and regular workshops.

2026 Group-level risk rating

The gross level of threats remains as high as ever owing to the geopolitical environment and the spread of new AI-powered technologies. However, there has been an ongoing enhancement of risk management measures over the past two years. The multi-year projects to strengthen cyber security and ensure compliance with European regulations continue apace (NIS2 Directive and DORA Regulation) and should make it possible to reduce the net criticality of the risk in 2026.

2.7.6.1.2.4 IT efficiency

IT efficiency is the risk of a fault in an IT system or an IT project, aggravated by the age of certain systems that have undergone a number of internal upgrades, or by the fact that the Group is the last user of some external tools.

The risk is major due to the complexity of IT project implementation, which involves certain challenges in terms of organisational efficiency. It especially applies to BtoC activities such as pension payments at the level of the Caisse des Dépôts Central Sector. It also affects the interface between the Group IT systems and overall systems coordination.

The risk management measures deployed include improving the reliability of processes for IT projects and their implementation (use of indicators, documentation) and better coordination, especially via tools such as mapping (IT providers and software) and incident monitoring.

2.7.6.1.2.5 Model risk

This risk corresponds to the potential loss resulting from decisions that may be based primarily on the results of internal models, due to errors in the models' development, deployment or use.

A governance framework is in place in all entities (CDC Group Model Risk Management Principles, regular meetings of model validation committees, independent reviews) and the risk is monitored through a number of indicators (follow up of action plans to implement recommendations made after each review, indicator of the volume of models not covered or not validated).

2.7.6.1.2.6 Human resources risk

This risk covers (i) the unavailability of people, which would have an impact on business continuity in the event of a loss of key resources or if inadequate resources were available in terms of numbers or skills, and (ii) employee health and safety issues.

All the Group's entities are concerned by human resources risk. Particular attention is paid to the safety of employees working in non-financial activities who are exposed to the risk of accidents and attacks. Recruitment risk is another focus of attention, due to the lack of suitable candidates for certain jobs in the financial entities or in the services and healthcare sectors.

2.7.6.1.2.7 Third party and outsourcing risk (rating downgraded to moderate)

This risk has been assessed as moderate since 2025 (it was previously classified as major) thanks to improved risk control systems at Group entities. Action plans are also being deployed, in particular to meet the requirements introduced by the Digital Operational Resilience Act (DORA), especially as regards service providers.

This risk arises from possible dependency on software suppliers or key subcontractors, especially in the event of default by a supplier or a change in prices.

The risk also relates to the ability to maintain control over activities that are entrusted to third parties on a long-term and routine basis. For Group entities subject to banking regulations, the challenge is also for them to be able to meet their obligations with regard to outsourced services, particularly in terms of the level and quality of formal relations with third parties and the ability to audit the service providers who carry out these services.

2.7.6.1.2.8 Risk of business interruption

Business interruption is assessed as a major risk in 2026 (moderate risk in 2025) because it has materialised more often and with a high impact, for example major climate-related incidents particularly in overseas territories, labour unrest, IT incidents linked to internal system malfunctions (e.g., data centres and applications shared by La Poste and LBP) and failures of third-party IT systems (market-wide incidents). This automatically leads to an increase in other operational risks, including safety and security risks impacting individuals and property, and process execution risks. Entities have improved their crisis management procedures in recent years, but there is still room for improvement.

2.7.6.1.2.9 Legal risk

Legal risk, which was classified as major in 2025, is now assessed as moderate (Group 2026 risk mapping). Legal risk corresponds to the risk of disputes with counterparties. The legal risks to which the Group is exposed may involve it in various legal actions, including civil, administrative, criminal and arbitration proceedings, with a potential impact on its financial position and reputation. Operations outside France call for enhanced vigilance with respect to local requirements.

Redefined in 2024 on the basis of pre-existing risks and now including a new risk, business interruption risk corresponds more specifically to any failure (i) in complying with legal and regulatory rules applicable or likely to be applicable to Group entities in the context of non-banking and financial activities (excluding GDPR), (ii) in monitoring developments in applicable laws and regulations (regulatory intelligence), (iii) in the preparation, drafting and monitoring of legal documents, including archiving, and (iv) in the management of disputes or inspections by administrative or regulatory authorities.

This risk is assessed as major at Group level due to the risk of non-compliance with legal and regulatory obligations unrelated to banking and financial activities, amid increased transparency obligations under the new European requirements (CSRD).

2.7.6.1.3 Structure and governance of the operational and compliance risk management system

2.7.6.1.3.1 Operational risk management

The Group Risk Management division is responsible for analysing and measuring Group risks.

The Operational Risk Management department, which reports to the Group Risk Management division, brings together operational risk management, permanent control and cyber security teams. A Group operational risk management plan has been formally documented and a network of operational risk correspondents has been created, spanning the Public Institution's divisions and the Group's entities.

Permanent control teams within the Operational Risk Management department of the Group Risk division help manage operational and compliance risk through continuous improvement of permanent controls (standards, reporting and compliance controls), in liaison with the Public Institution's divisions and the Group's entities.

The Chief Executive Officer has designated the Group Risk Director as the person responsible for the permanent control of Caisse des Dépôts' AML-CFT system (pursuant to Government Order of 6 January 2021 on AML-CFT systems and controls, articles 15 and 18).

The Legal Affairs, Compliance and Ethics division is responsible for the Group's anti-money laundering and terrorist financing (AML-CFT) programme and anti-bribery and corruption ("ABC") programme. It also tracks compliance with the principles set out in the Group's Code of Ethics.

2.7.6.1.3.2 Internal control system

The risk management system is based on three lines of defence that constitute the internal control framework.

First line of defence

The first line of defence consists of the operational divisions. The operational divisions are responsible for the risks arising on their activities. Therefore, based on the respective scopes of the other lines of defence, they are responsible for:

- identifying their risks;
- ensuring they comply with the entity's risk appetite;
- introducing risk management procedures and corrective actions if necessary.

Second line of defence

The second line of defence consists of a specialist unit whose role is to oversee and coordinate risks. It also comprises one or more units specialised in second-tier permanent controls.

At Group level, the second line of defence consists of the Group Risk Management division and the Compliance department of the Legal Affairs, Compliance and Ethics division.

Each Group entity has a specialist unit that oversees and coordinates its risks. The entities' risk management units together form the Group Risk Control Function.

The Risk Control Function has sufficient hierarchical authority to carry out its duties in full. If and when it performs tasks not related to the second line of defence, the Function ensures that proper segregation of duties is implemented, so that it can provide the second line of defence with full autonomy.

Third line of defence

The third line of defence consists a specialised unit whose main role is to provide governance with objective, independent and overall assurance as to the efficacy of the governance and risk management procedures and internal controls and the achievement of risk management and control objectives by the first and second lines of defence.

At Group level, the third line of defence is provided by the General Inspectorate – Group Internal Audit division. See section 2.7.2.3.3. for details.

Operational risk monitoring tools

The risk management, permanent control and compliance divisions of the Group entities, in collaboration with the operational divisions, ensure that adequate control measures are in place to provide reasonable assurance that all operational risks inherent to these processes are managed. A number of different tools have been developed:

Risk maps

For the Caisse des Dépôts Central Sector, the Group Risk Management division works with the operational divisions to produce operational and compliance risk maps, which are updated every year.

The Legal Affairs, Compliance and Ethics division's Compliance department contributes to the mapping of Group Risk Management division's operational and compliance risks and produces two granular compliance risk maps specifically to meet regulatory AML-CFT requirements.

Using their own methods, the Group entities also map their operational and compliance risk, in order to identify the major risks to be matched to permanent controls and the action plans to reduce their probability of occurrence and/or their potential impact.

The major risks identified for the Group are consolidated by the Group Risk Management division and presented to the Caisse des Dépôts Management Committee.

These maps and an assessment of the intensity of the risks (priority zones) provide the foundation for defining the risk appetite and for the Internal Capital Adequacy Assessment Process (ICAAP).

From 2026, three consolidated operational and compliance risks maps are to be drawn up for use by the governance team:

- Savings Funds;
- Group (Central Sector);
- Social Policy division, which performs mandates on behalf of third parties that are not consolidated for accounting purposes.

"Event" databases

All control events reported within the Caisse des Dépôts Central Sector are recorded in the PRISM centralised database published by Enablon and significant events are monitored by the Group Risk Management division, with the Legal Affairs, Compliance and Ethics division in the case of compliance events.

Significant events are reported by the subsidiaries to the Group Risk Management division and also to the Legal Affairs, Compliance and Ethics division in the case of compliance events (these events are also recorded in PRISM). The aim is to consolidate all types of events impacting the Caisse des Dépôts Group, highlight identified system failures, assess the potential or actual related losses and draw up appropriate corrective action plans. The action plans are implemented by the subsidiaries, at their own responsibility.

The second-tier control plan

The Group Risk Management division's second-tier control plan, which uses a risk-based approach, has been deployed in the Caisse des Dépôts Central Sector.

This control plan is designed to test the appropriateness of permanent control and compliance processes in terms of the risks involved and activities performed.

An assessment of the Group Risk Management division's permanent control and compliance processes is presented to the Caisse des Dépôts' Executive Committee and Supervisory Board.

The second-tier control plan is designed using the risk map validated by each operational division of the Central Sector, which identifies the major operational and compliance risks.

The second-tier control plans for the subsidiaries are produced and implemented by their respective permanent control and compliance departments. The Group Risk Management division oversees the correct application of the Permanent Control Charter, particularly in terms of the execution of second-tier controls.

Beyond the second-tier control plan, which assesses the first-tier controls (CN1), in 2025 the Group Risk Management division was involved in improving the first line of defence: identifying all CDC CN1s using a standardised format, formally documenting the expectations for CN1s in a procedure, and leading the network of operational risk correspondents at the level of the Public Institution and the subsidiaries.

Warning flags

The Caisse des Dépôts Central Sector and the Group subsidiaries have devised a series of indicators, including warning thresholds, to anticipate any deterioration in the quality of permanent controls or operational risk monitoring and control.

2.7.6.1.3.3 Coordinating the AML-CFT compliance programme

In accordance with the French Monetary and Financial Code, Caisse des Dépôts is responsible for setting up an anti-money laundering and terrorist financing (AML-CFT) programme.

The Legal Affairs, Compliance and Ethics division is in charge of the Group's AML-CFT system. It devises the guidelines that must be applied throughout the Group. Caisse des Dépôts has a zero-tolerance policy with respect to AML-CFT compliance risk. A new CDC Group policy on compliance with international sanctions and embargoes describes the general framework of obligations to be implemented in this regard by Group entities falling within the scope of this policy.

The Permanent Control department of the Group Risk Management division performs AML-CFT compliance checks within the Caisse des Dépôts Central Sector and the subsidiaries at least once a year.

Caisse des Dépôts has drawn up a country classification of AML-CFT risk based on a series of objective criteria and a pre-determined methodology. Accordingly, more stringent controls are applied to any files relating to high-risk countries.

Caisse des Dépôts has also compiled a blacklist to prohibit investments in Non-Cooperative Countries and Territories (*États et territoires non coopératifs* – ETNC) (see French government and EU blacklist) or countries on the Financial Action Task Force's (FATF) List no. 1 and subject to counter-measures.

2.7.6.1.3.4 Ethics compliance system

As it has no appetite for compliance risk, Caisse des Dépôts strictly applies the ethical guidelines set out in the Group Code of Conduct, Group Anti-Corruption Policy and Group Policy on the Prevention and Management of Conflicts of Interest, and the Public Institution's Code of Conduct. The guidelines have been revised and are accompanied by implementation procedures contained in the ethical standards compendium available on the Caisse des Dépôts Intranet.

2.7.6.2 Contingency and business continuity plan

2.7.6.2.1 Coordinating the contingency and business continuity plan

Continuity planning at Caisse des Dépôts is led by:

- the Group Risk Management division, which develops policies for the Caisse des Dépôts Central Sector to ensure business continuity and maintain operational readiness, sets continuity standards and makes sure they are properly implemented;
- the Operations and Transformation Management department, which is responsible for the operational management of the contingency and business continuity plan;
- the divisions, which develop, implement and test their business continuity plans.

CDC's contingency and business continuity plan aims to anticipate and manage the inherent risks associated with a major incident, ensuring the safety and protecting the health of CDC employees. It also aims to ensure the continuity of critical or important activities within the meaning of Decree 2020-94 of 5 February 2020 as amended, and of public-interest missions in the event of a major incident, in particular by limiting the legal and financial impacts in order to protect the Public Institution's reputation.

CDC's contingency and business continuity plan addresses four types of "major incidents" likely to cause partial or total interruption of activities:

- building damage: fires, power cuts, cyclones, earthquakes, etc.;
- incidents involving individuals: terrorist attacks, pandemics, industrial action, etc.;
- IT incidents: loss of data, loss of data center access, cyber attacks, loss of access to information systems, etc.;
- incidents impacting third-party service providers (outsourced critical services and critical services).

The September 2025 update of the Decree on internal control incorporated the changes introduced by DORA on digital operational resilience. Impacts on the contingency and business continuity plan were identified and include the introduction of ICT continuity measures in business contingency plans, business impact studies and stronger controls over outsourced critical services that now include ICT services. Against this backdrop, a methodological framework was adopted to define critical or important activities ("key processes") under the contingency and business continuity plan, in line with activities falling within the scope of DORA and the process mapping framework ("operational obligations") deriving from this classification: a maximum acceptable downtime of four hours and a high IT service commitment enabling the Group to focus on the real continuity issues and maintain robustness in the event of a crisis. A list of 21 critical or important activities has been drawn up.

Caisse des Dépôts has also adopted an anti-corruption policy for the Group and implemented a whistleblowing facility for all subsidiaries concerned, in accordance with law No. 2016-1691 of 9 December 2016 on transparency, anti-corruption and economic modernisation (the "Sapin II" law).

2.7.6.2.2 Cyber security

Cyber security means all organisational measures and controls and all resources (e.g., human, technical) used to protect the Group's IT assets, comprising its information assets on the one hand and its communication networks and IT systems on the other, from logical attacks via physical or logical security breaches.

The Group Risk Management division defines the Group's IT systems security policy, which applies to Caisse des Dépôts and all subsidiaries within the scope of the risk appetite.

Each entity develops its own security policy incorporating the principles of the Group's IT Security Policy within its own scope, including its subsidiaries and any operational entities. The entities' policies are adapted to the entities' activities, the extent of the risks incurred and their context. They do not affect any of the legal, statutory or contractual provisions applicable to the Group entity or the entities within its scope, especially any secrecy or non-disclosure rules. Within each entity, divisions may design their own specific IT systems security policy, based on the Group policy. These local policies must, at a minimum, comply with the rules established in the Group policy and comply strictly with the reference framework.

IT systems security is focused on system availability, data integrity and confidentiality, and proof (or non-repudiation) of transmission, represented by the acronym AICP (i.e., availability, integrity, confidentiality, proof).

The IT Charter establishes the cyber security principles applicable within the Caisse des Dépôts Central Sector and is binding for every employee. After consulting with the employee representative bodies (CSSCT and CUEP), the charter became effective through a decree signed by the Chairman and Chief Executive Officer.

IT systems security deployment is overseen by the Information Systems Strategy Committee, which meets twice a year.

In addition to internal cyber security measures, the Group also uses an external cyber rating tool to round out its assessment of the external cyber risks threatening its information assets.

2.7.6.2.2.1 Application of new European regulations Digital Operational Resilience Act (DORA)

The Digital Operational Resilience Act (DORA) is an EU regulation on the financial sector (banking, insurance) that came into effect on 16 January 2023 and has applied since 17 January 2025.

Banks and insurance companies are increasingly dependent on Information and Communication Technologies (ICTs) to provide their financial services. This leaves them vulnerable to cyber attacks and incidents.

The aim of DORA is to strengthen the operational resilience and security of financial entities by making sure that they are able to stay resilient in the event of serious operational disruption.

DORA (Regulation (EU) 2022/2554) is implemented specifically for CDC through the Decree published on 1 September 2025 (Decree No. 2025-876 amending Decree No. 2020-94 of 5 February 2020) and is effective from 1 January 2026. What is new is that the regulations will apply not only to CDC, but also to its information and communication technology (ICT) service providers. This means that an information system is now considered holistically, including services that are outsourced and interconnected with the principal's information system.

As far as the scope of the new regulations is concerned, they apply to financial activities as a whole, which are classified as critical.

DORA will also apply to ICDC as a CDC ICT service provider.

The new regulations are based on five pillars:

1. Information and communication technology (ICT) risk management
The challenge is to establish a robust and documented ICT risk management framework, including identification, assessment and proactive management of technological threats in order to minimise disruption to essential services.
2. Management, classification and reporting of ICT-related incidents
This pillar consists of establishing processes to detect and classify ICT-related incidents, manage their rapid resolution, and notify relevant stakeholders and regulators in a timely manner to guarantee the required transparency.
3. Digital operational resilience testing
This pillar consists of designing and regularly executing a programme of operational resilience tests, including advanced tests such as simulated attacks (penetration tests), to ensure that the response to cyber threats is adequate. These advanced tests will be carried out on the entire information system, including outsourced services interconnected to our system, under the supervision of the ACPR, which will determine the tests' scope and timing.

4. Management of risks related to third-party ICT service providers (critical and non-critical)

This pillar consists of developing an ICT risk management strategy related to third-party service providers, including a centralised register of contracts, integration of specific security clauses and pre-engagement risk assessments, as well as ongoing monitoring and regular audits.

5. Systems for sharing information between establishments

The challenge is to establish secure mechanisms for sharing information between trusted financial institutions, encouraging the exchange of intelligence on cyber threats and emerging vulnerabilities to improve collective security.

Defining critical functions will be essential in order to determine the scope of application of these new DORA regulations. It will enable us to focus compliance efforts on these functions, ensuring that resilience measures prioritise those areas with the greatest impact in the event of disruption.

A function is critical if it determines:

1. the entity's survival;
2. the entity's compliance with regulatory obligations;
3. the preservation of the entity's B2B image and reputation;
4. the entity's ability to comply with the maximum allowable downtime of 48 hours.

At issue is a subset of the activities covered by the contingency and business continuity plan, which we have grouped into two families: banking activities and cross-business activities.

Our ICT Risk documentation was completely overhauled in 2025, according to schedule. A compliance update concerning risk analyses will be carried out in 2026, taking into account emerging risks, monitoring and the digital resilience strategy.

The DORA major incident reporting procedure has been put in place to ensure prompt notification to the regulator, in line with our commitment to the ACPR.

Our technical testing system already largely meets DORA requirements. End-to-end testing of critical functions will be prepared in 2026 (mock test), with a view to an ACPR audit in 2027.

Pillar 4 (Third-Party Risk Management) represents the most significant effort for all financial entities, involving a comprehensive review of the 400 or so ICT contracts to be listed in a special register that will be issued in March 2026. Contractual amendments are part of the long-term process of renegotiating contracts.

Pillar 5 (Information Sharing Arrangements) is already in place.

Some subsidiaries are also subject to the new DORA regulations, including Bpifrance, La Banque Postale, CNP Assurances and SFIL. The DORA programme set up at CDC is also monitoring the progress of subsidiaries' programmes and proposing ways of capitalising on the work already completed, in particular regarding the management of third parties that provide ICT services to more than one Group entity.

2.7.7 Other risks

2.7.7.1 Tax and legal risks

Legal risk is defined by article 8 of Decree No. 2020-94 of 5 February 2020 as applicable at 31 December 2025, as the risk of any dispute with a counterparty.

Tax and legal risk comprises all risks related to ignorance, to non-compliance or to misinterpretation of current legislation and may result in lawsuits arising from erroneous application of procedures or regulations.

The Legal Affairs, Compliance and Ethics division analyses and clarifies legal and tax guidelines in order to streamline processes and tighten up management practices. These guidelines apply to all Group operating activities. It is also involved in designing key projects to boost Group-wide legal compliance. It helps the operating divisions and subsidiaries with legal and tax matters in all aspects of their businesses as well as with cross-disciplinary issues such as secure IT development.

Lastly, the Legal Affairs, Compliance and Ethics division monitors litigation risk for both the Public Institution and the Caisse des Dépôts Group as a whole.

2.7.7.2 Environmental risks

Environmental, social and governance (ESG) risks are the risks of any actual or future negative financial impacts of ESG factors on its counterparties or invested assets. ESG risks encompass climate change, biodiversity and social risks as well as risks deriving from counterparties' governance practices.

The assessment and management of ESG risks is a major priority for the Caisse des Dépôts Group.

For the Caisse des Dépôts Group, sustainable development and responsible investment are central to its values and missions. Its goal is to support all regions in their efforts to drive sustainable development and social cohesion. These challenges are described in the Group's Business Review and Sustainable Development Report and Responsible Investment Report.

Faced with the climate emergency, the Caisse des Dépôts Group is committed to actively supporting the Paris Agreement, in the form of national objectives for combating climate change, as set out in the French National Low Carbon Strategy, which has set a goal of carbon neutrality by 2050.

The aim is to finance an economy compatible with limiting global warming to 1.5°C by 2050, which is reflected in five core principles:

- increasing green financing;
- reducing financing that is harmful to the climate;
- supporting the decarbonisation of companies and asset portfolios;
- assessing and managing climate risk;
- steadily neutralising emissions from internal operations.

2.7.7.2.1 Climate risks

There are two main categories of climate risk:

- physical risks correspond to the risk of financial loss caused by the occurrence of extreme climate events or by the consequences of gradual climate change;
- transition risk represents the risk of financial loss caused by the transition to a low-carbon economy. This can take the form of tax incentives (carbon tax, emissions trading scheme), sector-specific regulations (ban on new internal combustion vehicles from 2035) or changes in consumer preferences.

2.7.7.2.2 Focus on climate risk management within the Public Institution

The Public Institution has drawn up a climate risk roadmap with three priority objectives:

- developing harmonised methodologies for identifying and measuring climate risks across the Public Institution's entire balance sheet;
- integrating climate and environmental risks into all its financial risk management processes;
- drafting a climate risk management policy, in line with the Group's climate policy. This policy increases the Group's resilience to climate risks through commitments to mitigate and adapt to climate change, which reduce Caisse des Dépôts' exposure to transition and physical risks.

In 2025, the climate risk team worked on the effective rollout of the climate risk measurement tool within the Public Institution's businesses and in particular in the Banque des Territoires network. Rolling out the tool among operational staff enables the Public Institution to adopt a climate risk management approach based on three lines of defence and to fine-tune its risk measurement by taking into account the specific characteristics of our counterparties. This system is part of a broader risk management framework designed to:

- refine and update inventory of the Public Institution's balance sheet exposures to climate risk (stock view) and include new climate risk indicators in the risk appetite framework;
- provide information on climate risks by counterparty (flow view): the tool will provide estimates of the potential impact on the balance sheet, the income statement and the counterparty's credit score that will enhance the financial analysis. This information is used to inform investment and financing decisions and determine whether the project takes these risks into account and, if necessary, to propose measures to reduce these risks.

The physical risk scoring tool combines:

- future climate data according to three climate scenarios (Representative Concentration Pathways 2.6, 4.5 and 8.5) for nine climate hazards and three time horizons (2020-2040, 2041-2070, 2071-2100) depending on the geographical location of the assets;
- sector-specific vulnerabilities to different hazards, with some sectors being structurally resilient to the occurrence of a climate event, while others are structurally vulnerable;
- the adaptation measures deployed by the counterparty to reduce its risks and refine the score.

The transition risk scoring tool combines:

- an analysis by sector, including a measurement of each sector's average emissions, comparing their current carbon intensity with the decarbonisation effort that each sector will have to make to achieve net-zero emissions in 2050;
- the transition efforts of the counterparty's host country or the country where the project is located;
- factors specific to the counterparty's actual emissions and its decarbonisation strategy, if any, which are taken into account to adjust the score in order to reflect the level of risk represented by the counterparty as accurately as possible.

These scoring tools were finalised in 2023 and gradually deployed in the business lines as from 2024. The deployment phase was completed in December 2025. All of the Public Institution's appraisers have received training in the use of scoring tools and have been made aware of the impacts of climate change on portfolios. **Since 1 January 2026, the use of the tools has been mandatory** for all funding and investment projects to be approved by a committee ahead of the Public Institution's commitment. The climate risk measurement tools will support implementation of the Public Institution's adaptation and mitigation strategies and ensure that these risks are systematically taken into account when awarding financing.

Results: at 31 December 2025, a very small proportion of Central Sector assets (0.4%) were exposed to a very high risk of occurrence of physical risks and 28% were exposed to a high risk.

At the same date, 3% of assets were exposed to a very high transition risk and 10% were exposed to a high transition risk, mainly due to exposure to the heavy industry, energy and real estate sectors.

An internal climate stress test covering the period to 2050 was again carried out in 2025 on the listed securities portfolio and on the portfolios of infrastructure and real estate assets included in the Group's prudential model, and also on the Savings Funds' portfolios of listed securities. Three scenarios were used: an orderly transition scenario, a disorderly transition scenario and a scenario based on over 4°C global warming by the end of the century. The physical risk scenario has the greatest impact across all asset classes. This scenario assumes that the transition would not take place or would not be sufficiently ambitious. These impacts are consistent with the economic consequences of climate change in a scenario of sustained greenhouse gas emissions.

A climate risk management policy applicable to the Public Institution and its financial subsidiaries came into force on 1 January 2024. This policy sets out the general framework for measuring and controlling climate risks, through the inclusion of climate risks in the Group's risk map, the development of tools to identify and measure risks when the investment or financing decision is made, the organisation of controls into three lines of defence and the phased roll-out of climate risk management measures. Two successive reviews of the implementation of the policy were carried out at the end of 2024 and again at the end of 2025 involving all subsidiaries. These reviews highlight the Group's growing maturity in terms of measuring and managing climate risks.

2.7.7.2.3 ESG risk management at La Banque Postale

A materiality analysis was carried out in to identify the short-, medium- and long-term impacts of ESG factors on financial risks. At this stage, the analysis only concerns climate factors. Social and governance factors are due to be added in the target vision. Work has also been carried out on biodiversity-related risks in order to measure the impacts and dependencies of the Bank and its main business portfolios. La Banque Postale has published its first Climate-Nature report, which complies with the standards of the Taskforce on Nature-related Financial Disclosures (TNFD) and its counterpart, the Taskforce on Climate-related Financial Disclosures (TCFD).

La Banque Postale has also continued its work to measure the financial impact of climate risks and since 2024, for the first time, it has included this impact in its provisions. In addition to existing sector-specific provisions, climate risk provisions are now set aside for the two main portfolios:

- Corporate portfolio: provisions for transition risk based primarily on the estimated impact of higher carbon prices on the counterparties' solvency;
- Retail home loan portfolio: provisions for physical flood risk and the impact this may have on expected recoveries of loans subject to legal collection procedures.

These dimensions will be refined and expanded at the end of each reporting period and as the system matures.

2.7.7.2.4 Climate and environmental risk management at SFIL

SFIL has defined a climate and environmental risk rating methodology to rate the climate and environmental risks of the local authorities (municipalities, groups of municipalities with their own tax status, groups without their own tax status, departments and regions) and healthcare institutions in its portfolio by applying a rating grid separately to each one.

2025 saw the continued operational deployment of this rating system, particularly in the development of ICAAP stress tests and local authority loan approval procedures.

SFIL has also implemented a number of initiatives in this area, including:

- validation of a 2025-2026 ESG roadmap designed to embed ESG risk considerations more deeply within its governance, strategy and risk management framework, while adopting a global and coherent approach to the management of sustainability matters, in line with its strategic priorities;
- implementation of a training plan for the bank's teams and directors to raise awareness and understanding of climate and environmental risks.

At the same time, the climate risks associated with export credit transactions have been assessed since the beginning of 2024 using scoring methodologies developed by the Public Institution. The scores are fed into the ESG risk analysis tool (ESG grid). This ESG risk assessment grid is structured into three sections: environmental, social and governance, and takes into account double materiality (project impact as well as project risks).

2025 also saw completion of the thematic review of all supervised institutions, including SFIL, launched in 2022 by the European Central Bank. The aim of this review was to assess how well climate and environmental risk considerations were embedded within the institutions' strategy, governance and risk management systems. This key step is part of SFIL's ongoing strategy to pursue a trajectory in line with prudential expectations and to sustainably strengthen the integration of climate and environmental risk considerations into all its activities.

2.8 Related party transactions

Related parties include consolidated companies, the Savings Funds, the funds managed by Caisse des Dépôts' Social Policy and the funds managed by Caisse des Dépôts on a discretionary basis in connection with the 2030 Recovery Plan.

2.8.1 Relations between consolidated companies

Transactions and balances existing at year-end between fully consolidated companies are eliminated in consolidation. The following information therefore only concerns intra-group transactions with jointly controlled companies (accounted for by the equity method), and with associates over which the Group exercises significant influence (accounted for by the equity method).

<i>(in millions of euros)</i>	31.12.2025	31.12.2024
Loans	1,949	1,446
Other financial assets	964	765
Other assets	5	40
Total assets	2,918	2,251
Borrowings	501	342
Other financial liabilities	51	24
Other liabilities	5,113	5,300
Total liabilities	5,665	5,666
Commitments given	488	232
Commitments received	10	
Net interest income (expense)	46	23
Net fee and commission income (expense)	(14)	
Net income (loss) from financial transactions	232	164
Net income (expense) from other activities	(550)	(598)
General operating expenses, net of rebillings	4	(2)
Gross operating profit (loss)	(282)	(413)

2.8.2 Related parties not controlled by the Group

2.8.2.1 Savings Funds

Caisse des Dépôts manages the centralised Savings Funds entrusted to it by the French State.

<i>(in millions of euros)</i>	31.12.2025	31.12.2024
Loans ⁽¹⁾	73,714	78,120
Other assets	77	59
Total assets	73,791	78,179
Borrowings	7,917	6,089
Other financial liabilities	2,504	2,322
Other liabilities	7	180
Total liabilities	10,428	8,591
Commitments given	7,262	8,106
Commitments received	18,566	19,696
Net interest income (expense)	1,532	1,946
Net fee and commission income (expense)	1	
Net income (expense) from other activities	(33)	(24)
General operating expenses, net of rebillings	253	210
Gross operating profit (loss)	1,753	2,132

(1) Including €59.5 billion in La Banque Postale loans at 31 December 2025 and €63.4 billion at 31 December 2024.
Including €14.2 billion in Central Sector loans at 31 December 2025 and €14.7 billion at 31 December 2024.

2.8.2.2 Funds and mandates managed by Caisse des Dépôts

Caisse des Dépôts' Social Policy division manages around 60 funds and mandates, mainly in the fields of pensions, vocational training and social cohesion.

<i>(in millions of euros)</i>	31.12.2025	31.12.2024
Other assets	27	44
Total assets	27	44

Commitments given	9	9
Net interest income (expense)	(20)	(30)
Net income (loss) from financial transactions		(3)
Income and expenses from other activities	5	4
General operating expenses, net of rebillings	260	269
Gross operating profit (loss)	245	240

2.8.2.3 Funds managed in connection with the France 2030 Plan

Caisse des Dépôts was entrusted with the management of agreements and shares of the Investments for the Future Programme (PIA), also known as the National Loan or, since 2022, the “France 2030 Plan”. The French State has entrusted the operational management of these funds to Caisse des Dépôts with payment into a specific Caisse des Dépôts account at the French Treasury.

At 31 December 2025, these packages break down as follows after payments and after deducting management fees:

(in millions of euros)	Assets		Liabilities	
	Amounts receivable in respect of current or future cash investments		Amounts payable to the French State in respect of the National Loan	
	31.12.2025	31.12.2024	31.12.2025	31.12.2024
France Brevets (French patents)	96	96	96	96
Développement technologie (Technological development)	283	372	283	372
Économie sociale et solidaire (Social and solidarity economy)	17	19	17	19

Allocated to the PIA4 funds	1,147	1,527	1,147	1,527
PIA3 Plan Innovation Outre-mer (Innovation plan for the French overseas territories)	5	7	5	7
ACCRUED EXPENSES AND DEFERRED INCOME	3,919	4,459	3,919	4,459

2.8.3 Remuneration of members of the Supervisory Board, the Chief Executive Officer and the Deputy Chief Executive Officer

For the application of IAS 24, the key management personnel of the Caisse des Dépôts Group are the members of the Supervisory Board and the members of the Executive Committee.

The amounts received by the Supervisory Board members are qualified as indemnities and not remuneration, in accordance with article L. 518-7 of the French Monetary and Financial Code, which

stipulates that “these fixed and variable indemnities shall be capped by decree after consulting the Supervisory Board”.

For the year ended 31 December 2025, indemnities paid to members of the Supervisory Board amounted to €176,471.

The remuneration of the members of the Executive Committee amounted to €7 million for the year ended 31 December 2025.

2.9 Non-consolidated structured entities

Structured entities are entities that have been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity. This is particularly the case where voting rights relate solely to administrative tasks and the relevant activities are governed by contractual agreements.

A structured entity often has certain characteristics, such as a narrowly defined activity, a precise and clearly defined purpose, and insufficient equity capital to finance its activities without resorting to subordinated debt. Structured entities can take a variety of legal forms, including limited companies, partnerships, securitisation vehicles, collective investment schemes and unincorporated entities.

The following disclosures concern entities structured but not controlled by the Group. They are organised by group of entities with the same or similar business: securitisation, mutual funds and other activities.

Securitisation

Securitisation covers securitisation funds and similar structures that issue financial instruments with inherent credit risk that may be acquired by investors and may be organised in tranches. Securitisation is a financial technique that converts receivables that are illiquid and held to maturity, into negotiable liquid securities.

Investment funds

This activity seeks to meet investor demand by:

- managing funds via structured entities such as collective investment undertakings, real estate investment funds or equivalent vehicles;
- investing insurance premiums received by insurers from policyholders in accordance with the regulatory provisions of the French Insurance Code. The insurance companies' asset portfolios guarantee their ability to fulfil their obligations towards policyholders throughout the life of the insurance policy and both the value of the investments and the investment yield are correlated to the related obligations.

Other activities

This category covers all other activities.

2.9.1 Interests in non-consolidated structured entities

The Group's interest in a non-consolidated structured entity concerns contractual or non-contractual ties that expose it to a risk of variable returns linked to the entity's performance. Its interest may be in the form of equity instruments or debt securities, but may also take the form of a loan, a cash facility, credit enhancement or the provision of collateral or structured derivatives.

The following table provides cumulative information by activity about all entities in which the Group has unrestricted interests:

(in millions of euros)	Carrying amount at 31.12.2025		
	Securitisation	Investment funds	Other activities
Financial assets at fair value through profit or loss	8,508	114,187	17
Financial assets at fair value through OCI	2,400	48	3
Financial assets at amortised cost		615	4,309
Other assets		3	
Total recognised assets in non-consolidated structured entities	10,908	114,853	4,329
Financial liabilities at fair value through profit or loss			195
Financial liabilities at amortised cost		29	
Other liabilities	14	1,341	
Total recognised liabilities in non-consolidated structured entities	14	1,370	195
Financing commitments given			1,510
Total commitments given to non-consolidated structured entities			1,510
Gross maximum loss exposure	10,908	114,853	5,839
Loss mitigation items			
Net maximum loss exposure	10,908	114,853	5,839

The maximum loss exposure corresponds to the interest recognised in assets and commitments given, less provisions recognised in liabilities and guarantees received.

(in millions of euros)	Carrying amount at 31.12.2025		
	Securitisation	Investment funds	Other activities
Financial assets at fair value through profit or loss	9,159	106,429	68
Financial assets at fair value through OCI	1,945	43	3
Financial assets at amortised cost		484	3,752
Other assets		3	
Total recognised assets in non-consolidated structured entities	11,104	106,959	3,823
Financial liabilities at fair value through profit or loss			152
Financial liabilities at amortised cost		3	
Other liabilities		913	
Total recognised liabilities in non-consolidated structured entities		916	152
Financing commitments given			4,091
Total commitments given to non-consolidated structured entities			4,091
Gross maximum loss exposure	11,104	106,959	7,914
Loss mitigation items			
Net maximum loss exposure	11,104	106,959	7,914

2.9.2 Disclosures concerning non-consolidated structured entities sponsored by the Group

Sponsored non-consolidated structured entities are defined as funds that are structured by a management company controlled by the Group.

A structured entity is considered to be sponsored by the Group if it has or has had a role in structuring, promoting to potential investors, managing under a discretionary management agreement or implicitly or explicitly guaranteeing the structured entity's performance. In addition, a structured entity is considered to be sponsored by the Group when its name includes either the name of the Group or one of its subsidiaries.

Income received by the Group from these entities, in which it did not hold any interest at 31 December 2025, amounted to €14 million in 2025 and consisted mainly of non-recurring commissions. In 2024, total income received by the Group amounted to €11 million.

2.10 Employee benefits

2.10.1 Employee benefits expense

<i>(in millions of euros)</i>	31.12.2025	31.12.2024

Equities	11	10
Bonds	96	96
Other assets	89	94
TOTAL PLAN ASSETS	196	200

2.10.3.6 Other information on employee benefit obligations

2.10.3.6.1 Weighted average discount rates used to measure retirement benefits

Average discount rate for each consolidated entity	31.12.2025	31.12.2024
Caisse des Dépôts Central Sector	3.37%	3.18%
La Poste Groupe	3.90%	3.30%
Compagnie des Alpes group	3.75%	3.35%
Icade group	3.80%	3.28%
Informatique CDC	3.94%	3.28%
CDC Habitat group	3.80%	3.10%

The discount rate is determined by reference to the iBoxx € Corporates AA 10+ index, which essentially represents the yield on investment-grade corporate bonds.

2.10.3.6.2 Analysis of sensitivity of the provision for employee benefit obligations to a rise or fall in the discount rate

	31.12.2025	31.12.2024
Sensitivity of actuarial liability	+/- 50 bps	+/- 50 bps
Amount of provision in the event of a rise in the discount rate	2,200	2,476
PROVISION FOR EMPLOYEE BENEFIT OBLIGATIONS AT YEAR-END	2,249	2,515
Amount of provision in the event of a fall in the discount rate	2,299	2,557

2.11 Statutory Auditors' fees

(in millions of euros)	31.12.2025			
	KPMG		Forvis Mazars	
	Amount	%	Amount	%
Statutory audit, certification, review of the individual and consolidated financial statements	13.9	82%	12.2	83%
• Central Sector	1.2	7%	1.1	8%
• Fully consolidated subsidiaries	12.7	75%	11.1	76%
Certification of sustainability information	1.4	8%	1.7	12%
• Central Sector	0.3	2%	0.3	2%
• Fully consolidated subsidiaries	1.2	7%	1.4	10%
Non-audit services	1.7	10%	0.7	5%
• Central Sector	1.0	6%	0.5	4%
• Fully consolidated subsidiaries	0.7	4%	0.2	1%
TOTAL	17.0	100%	14.7	100%

(in millions of euros)	31.12.2024			
	KPMG		Forvis Mazars	
	Amount	%	Amount	%
Statutory audit, certification, review of the individual and consolidated financial statements	12.3	81%	13.7	84%
• Central Sector	0.9	6%	1.0	6%
• Fully consolidated subsidiaries	11.4	75%	12.7	78%
Certification of sustainability information	1.3	9%	1.6	10%
• Central Sector	0.3	2%	0.3	2%
• Fully consolidated subsidiaries	1.1	7%	1.3	8%
Non-audit services	1.6	11%	1.0	6%
• Central Sector	0.5	4%	0.2	1%
• Fully consolidated subsidiaries	1.1	7%	0.8	5%
TOTAL	15.3	100%	16.3	100%

The amounts stated are the fees of the Statutory Auditors for the Central Sector of the Caisse des Dépôts Group, and the fees of the same Statutory Auditors for the subsidiaries, excluding the Mazars and KPMG networks.

2.12 Scope of consolidation of the Caisse des Dépôts Group

Caisse des Dépôts prepares separate annual financial statements under French GAAP for each of its constituent sectors: the Central Sector and the Savings Funds.

In addition, Banque des Territoires brings together all of Caisse des Dépôts' resources to promote regional development. It encompasses the operational departments (banking, investing, lending) and is supported by 16 regional departments with corporate departments (finance, communication, digital strategy and human resources corporate departments). It also includes two subsidiaries, CDC Habitat and SCET, which support regional players in engineering and consulting.

The Caisse des Dépôts Group is unique as a Public Institution with subsidiaries and affiliates that operate in the competitive sector. It publishes consolidated financial statements under IFRS. These combine the financial statements of the Caisse des Dépôts Central Sector and those of the entities over which Caisse des Dépôts exercises exclusive or joint control or significant influence to form the consolidated financial statements of the Caisse des Dépôts Group.

Presentation of the Group's scope of consolidation is organised on the basis of the Group's four business segments. Entities, sub-groups and subsidiaries are thus presented by business segment.

The list of consolidated entities is available at <https://www.caissedesdepots.fr/en/you-are-investor>.

The main companies are listed below:

2.13 Statutory Auditors' report on the consolidated financial statements

For the year ended 31 December 2025

This is a translation into English of the statutory auditors' report on the consolidated financial statements of the Company issued in French and it is provided solely for the convenience of English speaking users. This statutory auditors' report includes information required by European regulation and French law, such as information about the appointment of the statutory auditors or verification of the management report and other documents provided to shareholders. This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

To the Supervisory Board of Caisse des dépôts et consignations,

Opinion

In compliance with the engagement entrusted to us, we have audited the accompanying consolidated financial statements of Caisse des dépôts et consignations for the year ended 31 December 2025.

In our opinion, the consolidated financial statements give a true and fair view of the assets and liabilities of the financial position of the Group as at 31 December 2025 and of the results of its operations for the year then ended in accordance with International Financial Reporting Standards as adopted by the European Union.

The audit opinion expressed above is consistent with our report to the Audit and Risk Committee.

Basis for Opinion

Audit Framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the Statutory Auditors' Responsibilities for the Audit of the Consolidated Financial Statements section of our report.

Independence

We conducted our audit engagement in compliance with independence requirements of the French Commercial Code (*code de commerce*) and the French Code of Ethics (*code de déontologie*) for statutory auditors for the period from January 1, 2025 to the date of our report and specifically we did not provide any prohibited non-audit services referred to in Article 5(1) of Regulation (EU) No 537/2014.

Furthermore, the non-audit services that we provided to your Company and its controlled undertakings during the financial year that are not disclosed in the management report or in the notes to the consolidated financial statements are as follows:

- Forvis Mazars: the main assignments carried out in 2025 concerned the issuance of letters of comfort within the framework of issuance programs, attestations, agreed procedures and due diligence work.
- KPMG: the main assignments carried out in 2025 concerned attestations and agreed procedures, comfort letters in connection with the updating of EMTN programs or in the context of bond issues, reviews of internal control procedures, accounting and tax consultations, reviews relating to environmental, social and societal data or indicators, authorized tax services in application of the rules applicable to the countries concerned, and limited reviews.

Justification of Assessments - Key Audit Matters

In accordance with the requirements of Articles L.821-53 and R.821-180 of the French Commercial Code (*code de commerce*) relating to the justification of our assessments, we inform you of the key audit matters relating to risks of material misstatement that, in our professional judgment, were of most significance in our audit of the consolidated financial statements of the current period, as well as how we addressed those risks.

These matters were addressed in the context of our audit of the consolidated financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the consolidated financial statements.

Valuation of financial assets at fair value level 3

Identified risk

The group Caisse des dépôts et consignations recognizes in its consolidated financial statements a portfolio of financial assets measured at fair value, which amounted to 511 billion euros at December 31, 2025. For a large part of the asset portfolio, the determination of the fair value of these assets is based on prices directly observable in active financial markets (level 1) or valued using observable data (level 2).

However, the fair value measurement risk is considered to be higher for assets in level 3 of the fair value hierarchy under IFRS 13, which is measured using unobservable inputs (inputs whose value is based on assumptions or correlations that are not based on observable transaction prices for the same instrument at the measurement date, or on observable market data available at that date). These include unlisted equity investments, securitization instruments and hedging derivatives.

These assets are valued on the basis of models, assumptions and data, such as net assets, earnings outlook and discounted future cash flows, that require a considerable degree of judgement from management. Their fair value represents an outstanding amount of 37,6 billion euros as of December 31, 2025. Refer to the note 2.6 of the consolidated financial statements.

We deemed the measurement of these level 3 financial assets to be a key audit matter given the significant amount and the sensitivity of their fair value to management's judgement, particularly as regards the choice of the measurement methods and underlying assumptions to be used.

How our audit addressed this risk

We have:

- assessed the controls associated with the process of valuing financial assets;
- based on a sample of Level 3 financial assets, in conjunction with our valuation experts:
 - verified that the value estimate, determined by management, was based on appropriate justification for the valuation method, assumptions, and data used;
 - assessed the latest available valuations from experts and fund managers to assess the valuations used by the entity;
 - evaluated changes in classification among the three fair value levels;
 - performed an independent calculation and sensitivity analysis on a sample of structured securities
 - assessed the adequacy of the disclosures provided in the notes to the consolidated financial statements

Valuation of insurance liabilities in application of IFRS17

Identified risk

Of the insurance liabilities recognized in accordance with IFRS 17, net liabilities measured using the BBA (Building Block Approach or General Model) and VFA (Variable Fee Approach) models amounted to 376,5 billion euros at December 31, 2025, as presented in notes 2.4.7. to the consolidated financial statements.

The estimation of these liabilities as prescribed by IFRS 17 is based on the following principles:

- determining the best estimate of the present value of future cash flows required to meet contractual obligations towards policyholders. The projection of these future cash flows incorporates assumptions about policyholder behavior and management decisions. These estimated cash flows are discounted to reflect the time value of money, based on a risk-free yield curve adjusted for an illiquidity premium;
- the definition of the adjustment for non-financial risks, designed to cover the uncertainty over the amount and timing of future cash flows engendered by these risks. To assess this adjustment, the Group has chosen to apply the "Value at Risk" method, and has exercised its judgment in selecting the confidence level and diversification grid applied;
- the "contractual service margin", representing the present value of deferred future profits attributable to shareholders over the term of coverage of profitable insurance contracts, and recognized in the income statement on the basis of the hedging units defined by the Group and appropriate to the groups of insurance contracts in question. The Group has exercised its judgment in adjusting the methodology for determining the hedging units of these contracts, taking into account in the valuation models the expected real yield differential on the investments underlying the commitments, resulting from "real world" financial assumptions compared with those used in actuarial projections in a "risk-neutral" universe.

In view of the long-term nature of the commitments relating to insurance contracts valued using the VFA and BBA models, their high sensitivity to the economic and financial environment, which may have an impact on policyholder behavior, and the significant degree of management judgment involved in the choice of data and assumptions, as well as the use of complex modeling techniques, we considered the valuation of insurance liabilities relating to insurance contracts valued using these models to be a key audit matter.

How our audit addressed this risk

With the assistance of our specialists in actuarial modeling and IFRS accounting principles, our audit procedures consisted in:

- obtaining an understanding of the processes and methodologies defined by the Group's management, as well as the associated governance, to determine, in accordance with the principles of IFRS 17, the best estimate of the present value of future cash flows required to settle contractual obligations towards policyholders under insurance contracts valued using the VFA and BBA models.
- assessing the compliance of the accounting policies applied by the Group with the provisions of IFRS 17.
- specifically assessing the eligibility of "savings and retirement" insurance contracts for the VFA accounting valuation model and assessing management's correct application of these valuation methods to "savings and retirement" insurance contracts, in compliance with IFRS 17.
- assessing and testing the key controls implemented by management, including the internal control environment of the information systems involved in data processing. In particular, we assessed the control procedures relating to methodologies, judgments and key assumptions made by management. We also assessed the appropriateness of changes in assumptions, parameters or actuarial modelling processes used in the valuation of future cash flows.
- testing, on a test basis, the main actuarial methodologies, assumptions, and key parameters used in determining estimates of discounted future cash flows, the adjustment for non-financial risks and the margin on contractual services. We have assessed, on a test basis, the reasonableness of these estimates and of the processes used to determine the reversal to the income statement of the period in respect of the adjustment for non-financial risks and the margin on contractual services.
- testing, on a test basis, the reliability of the underlying data used in projection models and best estimate calculations of discounted future cash flows.
- performing analytical procedures on changes to identify any significant inconsistent or unexpected variations.
- assessing the appropriateness of the information disclosed in the notes to the consolidated financial statements.

Provisions for credit risks for La Banque Postale group

Identified risk

The CDC Group, through La Banque Postale Group, records provisions to cover the risk of losses resulting from the failure of its customers to meet their financial commitments. In accordance with IFRS 9, La Banque Postale Group recognizes impairment allowances for Expected Credit Losses ("ECL") on financial assets classified as Stage 1 (performing exposures), Stage 2 (underperforming exposures with a significant increase in credit risk), and Stage 3 (credit-impaired or defaulted exposures).

The expected loss impairment rules require the establishment of a first impairment status representing an expected loss at one year from the origination of a new financial asset and a second status representing an expected loss at maturity, in the event of a significant deterioration in credit risk. Impairments for expected losses (on outstanding loans in buckets 1 and 2) are determined mainly on the basis of models developed by La Banque Postale incorporating various parameters (probability of default or "PD", loss given default or "LGD", forward-looking data, etc.).

Furthermore, as disclosed in Note 2.7.3.1.2.4.2.10 "Evolution of credit risk", these allowances are complemented, where applicable, by sector-specific provisions.

Impairment losses are recognized on outstanding loans in default (bucket 3) on an individual or statistical basis. These impairments are assessed by management on the basis of estimated future recoverable cash flows, considering the guarantees available on each of the loans concerned.

The valuation of provisions requires judgment in classifying exposures (bucket 2 or 3), in determining future recoverable cash flows and in valuing sectoral provisions, the exercise of judgment being more complex given the uncertainty of the effects of the current crisis.

Given the importance of judgment in determining these provisions and the expected deterioration of credit risk due to the inflation context, we considered that the estimate of expected losses on customer loans as of December 31, 2025, was a key audit matter.

The principles applied in respect of credit risk provisions are described in notes 2.1.3.1.4 to the consolidated financial statements.

On December 31, 2025, loans and advances to customers at amortized cost amounted to 201 billion euros, including 136 billion euros for La Banque Postale Group (note 1.8). The associated impairment losses totaled 1,95 billion euros (note 2.3.6.2). The Group's cost of risk was -344 million euros as of 31 December 2025, of which -250 million euros related to La Banque Postale Group (note 1.8).

How our audit addressed this risk

Provisioning of outstanding loans in buckets 1 and 2

On the provisioning models:

- We assessed the frequency of review by the governance of the adequacy of the impairment models and the parameters used for the calculation of the impairments;
- We have assessed the appropriateness of the update of the parameters used for the calculation of impairment as of December 31, 2025;
- We assessed the methods used to consider the macro-economic context of the year in the methods used to determine model-based provisions and in the sectoral provisioning measures.
- We inspected the documentation underlying the estimation of sectoral provisions.

With respect to model-based estimated provisions on retail and corporate loans, we verified that the calculation parameters defined by the provisioning model were appropriately applied. We performed controls on the IT system implemented by La Banque Postale Group for the processing of its customer credit transactions, in particular tests on the general IT controls, interfaces and embedded controls for specific data used for credit risk provisioning.

Provisioning of outstanding loans in bucket 3

As part of our audit procedures, we examined the control procedures relating to the identification of exposures, the monitoring of credit and counterparty risks, the assessment of the risk of non-recovery and the determination of related impairment and provisions on an individual and collective basis.

Our work consisted in assessing the quality of the system for monitoring sensitive, doubtful and disputed counterparties, the credit review process and the system of guarantees valuation.

In addition, for a sample of credit files relating to corporate entities, we performed independent analyses of the amounts of provisions, and with respect to the provisioning of retail loans, we verified the proper application of the calculation parameters defined by the provisioning model. Finally, we assessed the appropriateness of the information provided in the notes to the consolidated financial statements.

Valuation of investments in associates and joint ventures

Identified risk

The value of investments in associates corresponds to the percentage interest held in the equity of the corresponding companies, plus any goodwill. This value is subject to an annual impairment test, using several valuation techniques and various macro-economic assumptions, including :

- historical data (shareholders' equity, share price);
- the use of forecasts (profitability outlook and business plan);
- the use of market assumptions, notably the discount rate and the perpetual growth rate.

This is an estimate that requires management to exercise judgment in selecting the items to be considered for the investments concerned. In this respect, we considered that the valuation of investments in associates and joint ventures was a key audit matter.

The item "Investments in associates and joint ventures" represents a total of 29 billion euros in the balance sheet as of December 31, 2025. Refer to the paragraphs 2.1.2.2 et 2.1.3.3 of the Note 2.1. « Principes et méthodes comptables applicables dans le Groupe »

The "share of net income of associates and joint ventures" amounted to 0.44 billion euros. Refer to the note 2.3.10 of the consolidated financial statements.

How our audit addressed this risk

We examined the processes used by the Group to measure the potential need for impairment of equity-accounted investments.

Based on the various methods used by the Group, we have:

- assessed the consistency of the historical financial data used with the data audited by the statutory auditors of the relevant companies;
- examined the forecasts used and assessed whether they were approved by the management bodies of the relevant companies and assessed the consistency of the assumptions used to construct them with past performance;
- involved, where appropriate, our valuation experts to corroborate the macroeconomic assumptions used and the discount rates applied.

With regard to the subsidiaries included in the scope of our audit, we assessed the consistency of the value of the shares retained by the Group with the conclusions of the statutory auditors of the relevant subsidiaries.

Specific Verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations of the Group's information given in the management report of the group.

We have no matters to report as to its fair presentation and its consistency with the consolidated financial statements.

Report on Other Legal and Regulatory Requirements

Appointment of the Statutory Auditors

We were appointed as statutory auditors of Caisse des dépôts et consignations by decision of the Chief executive officer for the consolidated financial statements for the year ended December 31, 2004 for Forvis Mazars and December 31, 2021 for KPMG.

As at December 31, 2025 Forvis Mazars was in the 22nd year of its engagement without interruption, including nineteen years since the securities of Caisse des Dépôts et Consignations were admitted to trading on a regulated market, and KPMG was in the 4th year of its engagement.

Responsibilities of Management and Those Charged with Governance for the Consolidated Financial Statements

Management is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the European Union and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the consolidated financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The Audit and Risk Committee is responsible for monitoring the financial reporting process and the effectiveness of internal control and risks management systems and where applicable, its internal audit, regarding the accounting and financial reporting procedures.

The consolidated financial statements were approved by the Chief Executive Officer.

Statutory Auditors' Responsibilities for the Audit of the Consolidated Financial Statements

Objectives and audit approach

Our role is to issue a report on the consolidated financial statements. Our objective is to obtain reasonable assurance about whether the consolidated financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these consolidated financial statements.

As specified in Article L.821-55 of the French Commercial Code (*code de commerce*), our statutory audit does not include assurance on the viability of the Company or the quality of management of the affairs of the Company.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control.
- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the consolidated financial statements.
- Assesses the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of this audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the consolidated financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein.
- Evaluates the overall presentation of the consolidated financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtains sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. The statutory auditor is responsible for the direction, supervision and performance of the audit of the consolidated financial statements and for the opinion expressed on these consolidated financial statements.

Report to the Audit and Risk Committee

We submit to the Audit and Risk Committee a report which includes in particular a description of the scope of the audit and the audit program implemented, as well as the results of our audit. We also report, if any, significant deficiencies in internal control regarding the accounting and financial reporting procedures that we have identified.

Our report to the Audit and Risk Committee includes the risks of material misstatement that, in our professional judgment, were of most significance in the audit of the consolidated financial statements of the current period and which are therefore the key audit matters, that we are required to describe in this audit report.

We also provide the Audit and Risk Committee with the declaration provided for in Article 6 of Regulation (EU) N° 537/2014, confirming our independence within the meaning of the rules applicable in France such as they are set in particular by Articles L.821-27 to L.821-34 of the French Commercial Code (*code de commerce*) and in the French Code of Ethics (*code de déontologie*) for statutory auditors. Where appropriate, we discuss with the Audit and Risk Committee the risks that may reasonably be thought to bear on our independence, and the related safeguards.
